ANCIENT FRAGMENTS.

PHŒNICIAN.

From Sanchoniatho.

CHALDÆAN.

From Berossus, Abydenus, Megasthenes, Nicholas Damascenus, Hestius, Alexander Polyhistor, Eupolemus, Thallus, Ctesias, Diodorus Siculus, Herodotus, Castor, Velleius Paterculus, Æmilius Sura, Plinius and Cicero.

DYNASTIES OF THE KINGS OF CHALDÆA, ASSYRIA, MEDIA, PERSIA, THEBES, AND EGYPT.

From Abydenus, Africanus, Eusebius, Syncellus, Castor, Ptolemæus, Ctesias, Eratosthenes, Manetho, Josephus, Diodorus Siculus, Herodotus, Theophilus Antiochenus, Malala, Suidas, Diogenes Laertius, Dicæarchus, Artapanus, Plato, Pomponius Mela and Barhebræus.

EGYPTIAN.

From the Obelisks, Manetho, Chæremon, Diodorus Siculus, Lysimachus, Polemo, Ptolemæus Mendesius and Artapanus.

TYRIAN.

From Dius and Menander.

CARTHAGINIAN.

From Hanno and Hiempsal.

INDIAN.

From Megasthenes and Clitarchus.

ATLANTIC AND PANCHÆAN.

From Marcellus and Euemerus.

ANCIENT FRAGMENTS.

ORACLES OF ZOROASTER.

HERMETIC, ORPHIC, PYTHAGOREAN AND TYRRHENIAN.

From the ancient and modern Hermetic Books, Horapollo, Chæremon, Orpheus, Hesiodus, Aristophanes, Timotheus, Timæus Locrus, Plato, Amelius, Onomacritus, Ion, Philoponus, Plutarchus, Ocellus, Aristoteles, Suidas and Damascius.

CHRONOLOGICAL.

From Berossus, Seneca, Censorinus and Theon Alexandrinus.

INTRODUCTORY DISSERTATION.

IN presenting this collection of ANCIENT FRAGMENTS to the world, some explanation of what is comprehended under that title may not be deemed unnecessary. We are accustomed to regard the Hebrew scriptures, and the Greek and Latin writings, as the only certain records of antiquity : yet there have been other languages, in which have been written the annals and the histories of other nations. Where then are those of Assyria and Babylon, of Persia and Egypt and Phœnicia, of Tyre and Carthage ? Of the literature of all these mighty empires, where are even the remains ? It will, no doubt, tend to excite some reflections of a melancholy cast, to look on this small volume as an answer. That all such remains are contained in it, I should be unwilling to assert : yet, with some diligence and research, I have not been able to increase its size with other fragments, which I could consider sufficiently authenticated.

It was my wish to have included in this collection all the fragments of the earlier Gentile world, which have reached us through the me-

dium of the Greek language. Of the early historians of Greece the names only of some have come down to us; whilst of others, such as Eupolemus and Histiaëus, several very interesting fragments have escaped the general wreck. In the classic ages of their literature, the acquaintance of the Greek historians with antiquity was generally confined and obscure: nor was it till the publication of the Septuagint, that they turned their attention to their own antiquities, and to those of the surrounding nations: and for this reason we meet with more certain notices of ancient history in the later, than in the earlier times of Greece. To have drawn a line then; to have inserted the earlier writers in exclusion of the later, would have been to have omitted the more valuable. To have reprinted the fragments of many authors, such as Nicolaus Damascenus, a writer of Damascus, of the Augustan age, would have introduced, with some matter worthy of attention, much of little interest. To have selected from them all, the passages relating to ancient times and foreign states, would have been a task as useless as laborious, and would have swelled the collection to a series of volumes. I have therefore, for the most part, excluded the native Greek historians—and every writer of the Augustan age and downwards—I have also omitted all fragments which bear about them the stamp of forgery, or are the productions of Hellenistic

Jews, or of authors who have had access to the sacred Scriptures, and following the words, throw no additional light upon the subjects; under one or other of which divisions may be classed the Antediluvian books of Enoch, the fragments of Artapanus, the Sibylline Oracles, the Correspondence of Solomon and Hiram king of Tyre, the tragedy of Ezekiel in which Moses figures as the hero, with several compositions of a similar description.

The contents, then, of this volume, are Fragments which have been translated from foreign languages into Greek; or have been quoted or transcribed by Greeks from foreign authors; or have been written in the Greek language by foreigners who have had access to the archives of their own countries. Yet to render the collection more useful, and as it were a manual to the Chronologist and Mythological Antiquarian, I have added by way of Supplement such fragments and extracts as appear to have descended from more ancient sources, though they are now to be found only in the works of Greek or Latin writers. Some of these are merely illustrations of the fragments, or contain detached chronological notices, or such other curious information as may well be deemed worthy of a place. Thus I have endeavoured to comprise, in the volume, all the genuine relics of antiquity which precede the era of Grecian history; and which lie so scattered

among the folios, chiefly of the Fathers and the Philosophers of the lower empire, as to be inaccessible to the Antiquarian, unless in the neighbourhood of some large public library.

Miscellaneous as such a collection might be at first supposed, it will be found to resolve itself into two subjects; the early History, and the ancient Theological Systems of the world. In the following pages I have endeavoured to present a sketch of both; not with a view of entering into the details, but rather as a method of connecting the fragments with one another, to facilitate an examination of their contents, by directing the attention successively to those great landmarks which stand prominently forth amidst what might otherwise be deemed a wild, pathless and interminable; and to enable the reader, by following the same order of perusal, to elicit something like a regular continued narrative. In the Scriptures we have a brief but authenticated account of the earliest ages: but among the heathen writers, with the exception of some few very valuable historical fragments, we have little more than a collection of allegories and legendary tales. Upon examination, however, most of these legends, notwithstanding their obscurity, will be found to contain references to those grand primeval events whose memory was retained among every people upon earth: and for the com-

memoration of which were ordained so many of the ceremonies and mysteries of the ancients.

From such traditions, handed down for ages before they were committed to writing, we might expect but little aid. Indeed in all the researches of the antiquarian, conjecture must very generally supply the place of science. Yet, by pursuing a proper method of investigation, we may approximate to truth, and frequently illustrate circumstances obscurely hinted at in Scripture, and even occasionally fill up the gaps of history, by supplying events which have been omitted by the sacred writers as unconnected with the immediate objects under their consideration.

Persons, Events, and Dates in History, and Systems in Theology, are the objects to be examined and ascertained. And where the subject under investigation can be so divided, that the truth must lie among some few plausible hypothesis, which can be a priori, and at once laid down: by collecting all the evidence that can be had, and examining separately, and excluding successively each of these hypothesis which shall be found inconsistent with that evidence, we may contract the circle of conjecture, in some cases, till but one hypothesis is left; which one must be the truth, and is thus negatively rendered matter of demonstration. In other cases want of

evidence may leave room for several different opinions, none of which can really be refuted, though one may often be more plausible than another.

Mr. Faber, in his admirable work on the Pagan Idolatry, has collected and separately examined all the different systems of the Heathen Mythology; and has shown, 'that there is such a singular, minute, and regular accordance among them, not only in what is *obvious* and *natural*, but also in what is *arbitrary* and *circumstantial*, both in *fanciful speculations* and in *artificial observances*,' as to render untenable every other hypothesis than this—'that they must all have originated from some common source.'

Having thus shown their common origin, he enumerates three hypothesis as the only three on which, he conceives, the common origination of the various systems of Paganism can be accounted for :

1. Either all nations agreed peaceably to borrow from one, subsequent to their several settlements.
2. Or all nations, subsequent to their several settlements, were compelled by arms to adopt the superstition of one.
3. Or all nations were once assembled together in a single place and in a single community; where they adopted a corrupt form of religion, which they afterwards respectively carried with them into the lands that they colonized.

After examining at length and shewing the utter

impossibility of maintaining either the first or second of these hypothesis, he concludes that the third only can be the truth.*

In the same manner we may ascertain the region from which mankind originally dispersed. Both in ancient and modern times the Greeks have been accused of a kind of plagiarism, which was the prevailing custom of every nation upon earth. Egypt and India, and Phœnicia, no less than Greece, have appropriated to themselves, and assigned within their own territorial limits, the localities of the grand events of primeval history, with the birth and achievements of the Gods and Heroes, the Deluge, the origin of the arts and the civilization of mankind. And their claims have found more able supporters, only because they have not been so obviously liable to refutation. Yet by rejecting each country, whose claims rest upon no better foundation than its own local histories, and retaining those only, whose pretensions are substantiated by the concurrent testimony of the rest; it may be shown, independently of Scripture, that the primitive settlements of mankind were in such places, and attended with such circumstances, as the Scripture instructs us was the case.

* To these, perhaps, may be added a fourth, viz. that the superstition became general, partly by peaceful communication, and partly by force of arms: though the fulness of the evidence is such as to render this equally untenable with the others.

Of the transactions previous to the Deluge there are but few and faint memorials among the heathens. One of the most authentic may be found in the remains of the Phœnician History of Sanchoniatho, who is considered to be the most ancient writer of the heathen world. In what age he wrote is uncertain : but his history was composed in the Phœnician language, and its materials collected from the archives of the Phœnician cities. It was translated into Greek by Philo Byblius, and for the preservation of these fragments we are indebted to the care of Eusebius.

The Cosmogony* I shall have occasion to refer to hereafter : as one of the most ancient, it is extremely valuable, and as it speaks more plainly than the rest, it affords a key to their interpretation.

The Generations contain many very curious passages. In the first† is an allusion to the fall : in the second Genus may be Cain : after which we lose the traces of similarity : at the fifth‡ there is an interruption. But taking up the thread of inquiry, at the end, in Taautus or Thoyth,§ we may recognize Athothis,|| the second king of Egypt, the Hermes Trismegistus, who again¶ appears as the adviser of Cronus. His predecessor Misor

then corresponds with Mizraim, the first king of Egypt, the Menes and Mines of the dynasties.* In the preceding generation is Amynus, Amon, or Ham, the same with the Cronus,† of what by the historian is supposed to be a different but contemporary line. An ascent higher we find, Agrus, the husbandman, who was worshipped in Phœnicia as the greatest of the gods : he corresponds with Noah, the Ouranus of the other line, whose original name was Epigeus or Autochthon.

Sanchoniatho seems to have been a very diligent inquirer, and intimates at the conclusion‡ that the generations contain the real history of those early times, stripped of the fictions and allegories with which it had been obscured by the son of Thabion, the first hierophant of Phœnicia. That such is the case, we are assured by Philo Byblius, in the remarks on Sanchoniatho with which he prefaces his translation of the work. The passage also informs us that the history thus disguised was handed down to Isiris, the brother of Chna the first Phœnician, apparently alluding to Mizraim the brother of Canaan.

It is very remarkable that he has placed these characters in the true order of succession, though in all the traditions of the heathens they are generally confounded with one another. It is also remarkable that Sanchoniatho is almost the only

heathen writer upon antiquities who makes no direct mention of the deluge, though several obscure allusions to it may be found in the course of the fragment. Were we assured of his silence upon the point in the parts of his work that have been lost, the omission might still be accounted for from his avowed determination to suppress what he considered merely allegorical, for he would find the traditions of the deluge so intimately blended with those relating to the creation, that in endeavouring to disengage the truth from the fable he might easily be induced to suppose that they related to the same event.

For explanation of his fragment upon the mystical sacrifice of the Phœnicians,* I must refer to the very curious dissertations by Bryant† and Mr. Faber.‡ Sanchoniatho wrote also a history of the serpent, a single fragment§ of which is preserved by Eusebius.

In the fragments of Berossus again we have perhaps some few traces of the antediluvian world. Like Sanchoniatho, Berossus seems to have composed his work with a serious regard for truth. He was a Babylonian by birth, and flourished in the reign of Alexander the Great, and resided for some years at Athens. As a priest of Belus, he possessed every advantage which the records of

* p. 16.

the temple and the learning and traditions of the Chaldæans could afford. He appears to have sketched his history of the earlier times from the representations upon the walls of the temple.* From written and traditionary knowledge he must have learned several points too well authenticated to be called in question; and correcting the one by the other, and at the same time blending them as usual with Mythology, he has produced the strange history before us.

The first fragment preserved by Alexander Polyhistor † is extremely valuable, and contains a store of very curious information. The first book of the history apparently opens naturally enough with a description of Babylonia. Then referring to the paintings, the author finds the first series a kind of preface to the rest. All men of every nation appear assembled in Chaldæa:‡ among them is introduced a personage who is represented as their instructor in the arts and sciences, and informing them of the events which had previously taken place. Unconscious that Noah is represented under the character of Oannes, Berossus describes him, from the hieroglyphical delineation, as a being literally compounded of a fish and a man, and as passing the natural, instead of the diluvian night in the ocean, with other circumstances indicative of his character and life.

* See pp. 22, 24.

† p. 21.

‡ p. 22.

The instructions of the Patriarch are detailed in the next series of paintings. In the first* of which, I conceive, the Chaos is pourtrayed by the confusion of the limbs of every kind of animal: the second† represents the creation of the universe: the third the formation of mankind: others again that of animals, and of the heavenly bodies.

The second book‡ appears to have comprehended the history of the ante-diluvian world: and of this the two succeeding fragments§ seem to have been extracts. The historian, as usual, has appropriated the history of the world to Chaldæa. He finds nine persons, probably represented as kings, preceding Noah, who is again introduced under the name Xisuthrus, and he supposes that the representation was that of the first dynasty of the Chaldæan kings. From the universal consent of history and tradition he was well assured that Alorus or Orion, the Nimrod of the Scriptures, was the founder of Babylon and the first king: consequently he places him at the top, and Xisuthrus follows as the tenth. The destruction of the records by Nabonasar|| left him to fill up the intermediate names as he could: and who are inserted, is not easy so to determine.¶

¶ In the Syriac Chronicle of Bar-Hébræus, the names in the catalogue are given to certain recluses of the line of Seth, called the Sons of God, who lived upon Mount Hermon, and afterwards apostatized and became the fathers of the Giants.

Berossus has given also a full and accurate description of the deluge,* which is wonderfully consonant with the Mosaic account. We have also a similar account, or it may be an epitome of the same† from the Assyrian history of Abydenus, who was a disciple of Aristotle, and a copyist from Berossus. I have given also a small extract‡ from the Fragments of Nicholas Damascenus, relative to the deluge and the ark, whose wreck is said by him as well as Berossus, Chrysostom, and other writers, to have remained upon Ararat even at the very time in which they wrote.

Mankind appear to have dwelt some time in Armenia, and the Patriarch allotted to his descendants the different regions of the earth, with commands to separate into distinct communities. His injunctions, however, were disobeyed, and great numbers, perhaps all the human race, started from Armenia in a body, and, according to the Scriptures, journied westward, but according to Berossus, travelled by a circuitous route to the plains of Shinar. By combining the two narratives, we may conclude that they followed the winding course of the Euphrates, till they halted upon those celebrated plains, where the enterprising spirit of Nimrod tempted him to as-

pire to the dominion of the world, and to found the Tower and City of Babel as the metropolis of his future universal empire.

Upon the Tower of Babel and the events connected with it, will be found some very interesting fragments from Abydenus,* from Hestiaëus,† a very ancient Greek writer, from the Babylonian Sibyl,‡ and from Eupolemus.§ I have added also a curious extract from the Sibylline oracles.|| In these fragments are detailed the erection of the Tower, the dispersion of its contrivers, and the confusion of the languages; with the additional circumstances of the violent destruction of the building,¶ and the Titanian war, which forms so remarkable an event in all traditions of the heathens.

Previously to the erection of the Tower, men appear very generally to have apostatized from the patriarchal worship. About this time a further deviation from the truth took place; and upon the first and more simple corruption was engrafted an elaborate system of idolatry. Some

* p. 34. † p. 50. ‡ p. 50. § p. 57. || p. 51.

¶ Upon the rebuilding of Babylon, the Tower was completed most probably on the original plan. It is described by Herodotus as a pyramid of eight steps, about seven hundred feet high. Its ruins, which are still known upon the spot as the Birs Nemrod, or the tower of Nimrod, are described by Sir R. K. Porter, as a prodigious pile of unburnt bricks cemented with mud and reeds in horizontal layers, still rising to the enormous height of about two hundred and fifty feet.

account of these deviations will be found in the extracts from Epiphanius, Cedrenus, and the Paschal chronicle.* What is mentioned under the name of Barbarism, was probably the primeval patriarchal worship. It was succeeded by a corrupted form of superstition which is known among the ancients under the name of Scuthism, or Scythism, which was most prevalent from the flood to the building of the Tower. The new corruption, at that time introduced by Nimrod, was denominated Ionism,† or Hellenism : and both are still flourishing in the East under the well-known appellations of Brahmenism and Buddhism ; whose priests appear to have continued in an uninterrupted succession from the Brahmanes and Germanes, the philosophical sects of India mentioned by Megasthenes‡ and Clitarchus.§

By the introduction of a more degenerate superstition, Nimrod appears to have aimed at the establishment of an universal monarchy in himself and his descendants, of which Babylon was to have been the metropolis, and the Tower, the central temple of their idolatries. All who

attended him seem to have entered into the project, so far as he might have thought proper to divulge it, and to have assisted in the erection of the tower and city. But subsequent events shew that the proposed form of government and system of theology, though asquiesced in by the majority, did not command universal approbation. And the whole project was marred by the miraculous interposition of the Almighty.

What concurring circumstances might have operated to the dispersion, we have no clue to in the narrative of Moses. He mentions the miraculous confusion of the languages, and that the Lord scattered the people abroad from thence upon the face of all the earth; and they left off to build the city. But if we may credit the heathen accounts above referred to, with which the Hindoo, and indeed almost every remnant of traditionary lore concur; a schism, most probably both of a political and religious nature, was the result; a bitter war was carried on, or at least a bloody field was fought; from which the Scuths, defeated and excommunicated by their brethren, betook themselves, in haughty independence, to the mountains of Cashgar and the north:* whilst some violent and supernatural catastrophe, by the overthrow of the Tower, completed the dispersion.

* See Faber, Lib. VI. c. 4..

The Scythic nations became very generally Nomade, but sometimes settled in various parts. Of what family they were has been a subject of long and intricate dispute. The ancient chronologists have, almost without exception, supposed them of the race of Japhet, the eldest son of Noah: that they were the sons of Cush has also been insisted on with great learning and ingenuity.* But if all the nations, or even the upper classes of those nations, which bear the name, be the sons of Cush, one-third of the present human race must be the descendants of that patriarch. Indeed, before the introduction of Ionism, Epiphanius and others appear to have included all mankind under the name of Scuths. The first apostacy might have been introduced by Cush, and its

* The term Scuth, which, with the prefix, is supposed to be the same as Cuth or Cush, the root of the names Chusas Chasas Cassians Cusæans or Chrusæans, Chusdim Chasdim or Chaldæans, Cotti or Goths and many others, appears too general for a patronymic. All the northern nations were Scuthic, the Scuths of Touran. The Scuths of Iran occupied the entire Asiatic Ethiopia, containing the Iranian territories of the Assyrian Empire, extending from the Euphrates to the Indus, and from the Caspian to the Ocean. African Ethiopia or Nubia with the adjoining territories was also Cuthic. There were Indo-Scythæ, Celto-Scythæ, and even Ionic-Scythæ. The Belgæ in Gaul, the Pelasgi in Greece, the Sacas or Saxons, the Pelestim Philistim and Phœnicians, the Sarmans Sarmatians and Germans were Scuths. In short, the term is to be found in every corner of the earth, and may be traced in America and in Lapland, as well as in China and Japan.

followers have borne his name; which the succeeding heresy of Nimrod could not obliterate.

The Scythian nations of Touran and the North were generally addicted to the Scythic superstition; and whenever they rolled back the tide of war upon their ancient rivals; the idols temples and cities were the objects upon which they satiated their revenge. They were esteemed excommunicated, and of the Giant race, Nephelim, Rephaim and Anakim. The Scuths of Iran were also of the Giant race, with Nimrod as their chief. Of the Titanian war there appears to be a double aspect. When the Scuths of Touran are the Giants, the war between them and the Ionim is the subject of the legend; and they are the Giants cast out into Cimmerian darkness, and buried under mountains. The other view presents both parties conjointly before the schism, as the Nephelim, Apostates or Giants, engaged in carrying on the war against Heaven itself. And in these accounts we find more frequent allusions to the Tower and its supernatural overthrow.

The catastrophe at Babel completed the dispersion. On the division of the earth and planting of the nations, there are some very curious notices extant.* But whether Nimrod and his immediate adherents survived, and retained pos-

* pp. 50, 52.

session of Babylon, or transferred their seat of government to Nineveh and founded the great Iranian empire, or whether that empire and city were founded by Assur and the sons of Shem, is still a subject of dispute. We find Nimrod, however, under the well-known title of Alorus, at the head of the two Chaldæan dynasties,* mentioned above: but these appear rather to refer to the antediluvian patriarchs than to the proper kings of Chaldæa.

The first dynasty of Chaldæan Kings† is placed by almost all chronologists as the first Iranian dynasty, that of Nimrod under the name of Evechius, and his immediate descendants. Evexius is also placed by Polyhistor as the first Chaldæan king.§ The dynasty of the Arabian kings of Chaldæa|| is placed by Eusebius, Syncellus and others, as well as by Berossus, next in the order of succession. They have likewise been supposed to be a Scythic nation, which broke in upon the empire from the Scythian settlements of Cashgar, and obtained possession either of the entire empire, or only of the city of Babylon, during the period of its desolation, with the plains of Shinar and the country round the head of the Persian gulf, from whence they were expelled, and discharged themselves upon Palestine

as the Palli or Philistines, and upon Egypt as the Hycsos or Shepherd Kings.*

Next in succession, according to Eusebius and Syncellus, or perhaps contemporary with the preceding, came the long line of the great dynasty of the Assyrian Kings, who held the empire of the world for ten or twelve centuries, till their dominion was wrested from them by the Medes in the time of Thonus Concolerus, the Sardanapalus of the Greek historians. The different catalogues of the great Assyrian succession that are extant, will be found among the Dynasties.† The overthrow of the Assyrian empire was followed by several years of universal anarchy, bloodshed and revolution. And it is ascertained, that it was during this scene of confusion that Jonah was sent upon his mission to stop its progress at Nineveh.

Arbaces, the leader of the Median insurrection, though he succeeded in throwing off the Assyrian yoke, appears to have failed in his attempt to establish his own sovereignty: nor was the Median kingdom fully consolidated till the reign of Deïoces. The catalogues of the Median kings will be found among the Dynasties. Under Phraortes and Cyaxares the Medes extended their dominion over great part of Asia, but under Astyages, who was defeated and captured

by Cyrus, the kingdom merged in the Persian empire.

The Babylonians acquired a temporary independence at the fall of the Assyrian empire, but after two or three short reigns they were subdued by Senecherib.* Syria also became an independent kingdom, and prospered for a time, till again reduced under the Assyrian yoke. Persia at the same time arose, and alone maintained its independence against the growing power of the Medes and the new Assyrian dynasty, till the successes of Cyrus raised it above them all, and vested the empire of the world in the Persian race.

The Assyrian empire revived under Nabonassar, supposed to be the same with the Salmanassar of the Scriptures. Of this dynasty three several catalogues† will be found, the Ecclesiastical and Astronomical canons preserved by Syncellus, and the celebrated canon of Ptolemæus, besides some other notices of the successors of Nabonassar, among the supplemental Chaldæan fragments. The first princes of the line appear to have fixed their residence at Nineveh, and among them we may recognize the Tiglath Pileser, Senecherib, and Esar Haddon of the Scriptures. Their race appears to have terminated in Saracus, another Sardanapalus. Nabopollasar, a success-

ful rebel, began the last line of the Assyrian and Chaldæan monarchs.* He transferred the seat of empire to Babylon, and in his reign, his celebrated son, Nebuchadnezzar, extended his conquests over the bordering kingdoms of the north and west, by the reduction of Syria, Phœnicia, Judæa, Egypt, and Arabia; an accurate account of which is transmitted by Berossus.† On the death of his father, Nebuchadnezzar succeeded to the throne. Concerning him we have several very interesting fragments from Berossus,† and one from Megasthenes.‡ In these are detailed the splendor of his works at Babylon, its celebrated walls, and brazen gates; its temples, palaces, and hanging gardens. The prophesy of Nebuchadnezzar,§ probably alludes to the public notification of Daniel's interpretation of his vision. His successors, till the overthrow of the empire by Cyrus, are given by Berossus and Megasthenes, and will be found also among the dynasties.|| Among his four immediate successors we must find Belshazzar, and Darius the Mede. The latter has been generally supposed to be Nabonnedus, though some have endeavoured to identify him with Cyaxares. The conquest of the Median, Chaldæan, and Assyrian dominions by Cyrus, grandson of Astyages, and the nephew of Nebuchadnezzar, brings down the history to the

authentic records of Grecian literature. The Persian line, the successors of Cyrus, will be found in several different places, both among the Chaldæan and Egyptian fragments.

The intense interest which Egyptian history has excited, from the discovery of the interpretation of the Hieroglyphics, has induced me to spare no labour or expence in rendering this part of the work as perfect as circumstances would allow.

The *Laterculus* or *Canon* of the Kings of Thebes,* was compiled from the archives of that city, by Eratosthenes, the librarian of Ptolemæus Philadelphus. It is followed by the *Old Egyptian Chronicle*, with a Latin version of the same, from the *Excerpta Barbara*, and another from the *Armenian Chronicle* of Eusebius: they contain a summary of the dynasties of Egypt. To these succeed the Egyptian dynasties of Manetho,† whose introductory letter to king Ptolemæus, given in a subsequent page,‡ explains the nature of his work, and the materials from whence it was compiled. I have placed the six different versions of the *Dynasties* of Manetho that are extant confronting each other. The *Canon* of the kings of Egypt from Josephus,§ I have compiled from the historical fragments of Manetho: || and

I have thrown it into the form of a Canon to facilitate comparison. I have next given a very important Canon,* the first part of which, from Mestram to the end of the seventeenth dynasty, is preserved by Syncellus only: from the beginning of the eighteenth it is continued also in the fragments of Eusebius: and from hence to the conclusion, four different versions of it will be found. To these are added the Canons of all the kings of Egypt, mentioned by Diodorus Siculus† and Herodotus.‡ They were originally compiled by Scaliger, but I have corrected them and given them with several very important additions in the original words of the authors, instead of in the words of Scaliger himself. They are followed by the Canon of Theophilus Antiochenus.§ And after several very important chronological extracts|| upon the antiquities of Egypt, I have completed the Dynasties, with a Canon of the early Egyptian, Chaldæan, and Assyrian Kings, from the Syriac Chronicle of Bar-hebræus:¶ which I have placed beside each other as they are synchronized by that author, and given them in the English letters corresponding to the Syriac, instead of adopting the Latinized names of the translators.

I have, therefore, comprised in this part of

the work, no less than nineteen catalogues of the Egyptian kings, with all the various readings that occur in the different versions of the same. They have been compiled with the greatest care, and I have purposely abstained from all reference to the Hieroglyphics, that I might not be misled by any preconceived opinion.

At a time, when indefatigable research is every day bringing to light new and interesting circumstances, it would be absurd to attempt to give any thing but the roughest outline of Egyptian history. I shall merely observe, then, that after the dispersion from Babel, the children of Mizraim went off to Egypt, of which they appear to have continued some time in undisturbed possession. Menes Misor or Mestram, the Mizraim of the Scriptures, and planter of the nation, is naturally placed as the first sovereign of the united realm, at the head of all the catalogues. And perhaps the dominion of Athothis was equally extensive; for his name occurs in the *Laterculus* of Eratosthenes, and as the Thoth or Taautus of Sanchoniatho. After him the country seems to have been divided into several independent monarchies, some of whose princes may perhaps be found among the fourteen first dynasties. That the country was so divided, and that the first dynasties were not considered successive by the ancients, we have the authority of Artapanus* and Eusebius.

* p. 162.

The first historical fragment of Manetho,* from Josephus, gives an account of the invasion and expulsion of a race of foreigners, who were styled Hycsos or Shepherd kings; whose princes are identified with the seventeenth dynasty of all the Canons except that given by Syncellus as the canon of Africanus, in which they are placed as the fifteenth. Of what family they were, whence they came, and to what country they retired, have been the subjects of almost as many hypotheses as writers; I shall not venture a remark upon a problem, of which there is every reason shortly to expect a satisfactory solution. Josephus and the Fathers confound them with the Israelites, who appear rather to be referred to by the second fragment† as the lepers, who were so cruelly ill-treated by the Egyptians, and afterwards laid waste the country, assisted by a second invasion of the Shepherds. To these fragments I have subjoined six‡ other very curious notices of the exodus of the Israelites and the final expulsion of the Shepherds; which events appear to have been connected with one another, as well as with the emigration of the Danaan colonies to Greece, not only in time, but by circumstances of a political nature,§ and to have occurred during the sovereignty of the eighteenth dynasty. Tacitus has also noticed the exodus, but in terms evi-

dently copied from some of those which I have given : we have but few and scanty notices of the kings of Egypt, even in Diodorus and Herodotus. Its conquest by Nebucchadnezzar is related by Berossus,* and after two or three temporary gleams of independence, it sunk at length into a province of the Persian empire, and from that day to the present, according to the denunciation of the prophet,† Egypt has been the basest of kingdoms, and under the yoke of strangers.

The Tyrian Annals are fragments which were quoted by Josephus from the lost histories of Dius and Menander. They agree perfectly with the scriptural accounts, and furnish some particulars in addition. The correspondence of Solomon and Hiram, the foundation of Carthage, and the invasion, conquests, and repulse of Salmanasar ; the siege of Tyre by Nebuchadnezzar, and its subsequent government under judges, are historical additions of great interest and importance.

The Periplus of Hanno is an account of the earliest voyage of discovery extant. It was taken from an original and apparently official document which was suspended in the temple of Saturn, at Carthage. Falconer has edited it as a separate

* p. 37.

† Ezek. 29.

work, and gives two dissertations on it; the first, explanatory of its contents; and the second, a refutation of Dodwell's reflections on its authenticity. I have followed Falconer both in his text and translation. With respect to its age, Falconer agrees with Bougainville in referring it to the sixth century before the Christian era.

The *Periplus* is prefaced by a few lines, reciting a decree of the Carthaginians, relative to the voyage and its objects: and is then continued by the commander, or one of his companions, as a narrative, which commences from the time the fleet had cleared the Straits of Gibraltar. Bougainville has given a chart of the voyage, which may be found, together with the corresponding maps of Ptolemæus and D'Anville, in Falconer's treatise. It may be sufficient, however, to remark that *Thymiaterium*, the first of the colonies planted by Hanno, occupies a position very nearly, perhaps precisely the same with that of the present commercial city of Mogadore. The promontory of *Soloeis* corresponds with Cape Bojador, nearly opposite to the Canaries. *Cari-contichos*, *Gytte*, *Acra*, *Melitta* and *Arambys* are placed between Cape Bojador and the Rio d'Ouro which is supposed to be the *Lixus*. *Cerne* is laid down as the island of Arguin under the southern Cape Blanco: the river *Chretes* perhaps is the St. John, and the next large river mentioned is the Senegal. Cape Palmas

and Cape Three Points, are supposed to correspond respectively with the Western and Southern Horns, and some island in the bight of Benin, with that of Gorillæ. Vossius, however, supposes the Western Horn to be Cape Verd, and the Southern, Cape Palmas, in which case the Sierra Leone will answer to the Ochema Theon the Chariot of the Gods.

The description of the Troglodytæ, as men of a different form or appearance, may imply a change from the Moresco to the Negro race. Some passages, quoted by Falconer from Bruce's travels, explain the extraordinary fires and nightly merriment which alarmed the voyagers, as customs common among many of the negro tribes, and which had repeatedly fallen within the scope of his own observations. The Gorillæ are supposed to be large monkeys or wild men as the name *ἄνθρωποι ἄγριοι* may in fact import.

The Periplus is followed by a strange account of the African settlements, from the books of Hiempsal king of Numidia, preserved by Sallust.

Of the Indian fragments of Megasthenes, the most remarkable has already been referred to. In the two great divisions of the Philosophical sects,† into the Brahmanes and Germanes, we may doubtless recognize the predecessors of the

* p. 224.

present Brachmans and Buddhists of Hindostan. They are likewise mentioned by Clitarchus * as the Brahmanes and Pramnæ. The castes of India are also described at length, † and have continued with some variations to the present day. The antiquity of such a division is very great, and perhaps originated at the dispersion, as it prevailed chiefly among the Ionic nations, while the Scythic tribes prided themselves upon their independence, and the nobility of the whole race. Megasthenes is reputed to have been a Persian, and an officer in the army of Alexander in his expedition to India, and was employed upon several negotiations of consequence.

I have next given two short notices of some celebrated islands in the Atlantic and Indian oceans. The first, ‡ upon the Atlantic island, is quoted by Proclus, from the Ethiopic history of Marcellus, in illustration of the passages of Plato in the *Timæus* relative to the same. Some have looked upon the relation as worthy of credit, and confirmed by the broken nature of all the islands, which lie scattered between the old and the new world, regarding them as relics of a former tract which has been absorbed. The second fragment from Euemerus may relate to the islands in the Indian Archipelago ; though it is highly probable

‡ p. 233.

that both may refer only to the White island of the West, so celebrated in the Mythological legends of almost all nations, and in none more than in the antiquities of the British islands.

As I profess not to enter into the details, but merely to provide as it were the raw materials, I shall dwell but little upon Chronology. By far the most authentic record that has come down to us is the Canon of Ptolemæus.* It commences from the Chaldæan era of Nabonasar, and is continued to the conclusion of the reign of Antoninus Pius. In calculating its chronology, however, it must be observed, that although it starts from this Chaldæan era, its years are the Sothoic years of Egypt, consisting only of three hundred and sixty-five days, without any intercalation. Among the Chronological fragments at the end of the work will be found the passage of Censorinus,† so important in determining the celebrated epochs of ancient history; and likewise an extract from Theon Alexandrinus,‡ from the manuscripts of the King of France, partly cited by Larcher in his translation of Herodotus.§ For the complete extract, I beg leave to return my thanks to Mons. Champollion Figeac, and Mons. Hase librarian to the king. Several useful chronological passages will be found scattered over

* p. 83. † p. 324. ‡ p. 329. § Vol. ii. p. 556.

the work : some also are collected at the end of the Dynasties.* I have added also two short notices of the Sarus and Nerus of the Chaldæans.†

It is remarkable, that the three great eras of ancient history commence within thirty years of one another, and are commonly fixed.

The first Olympiad, B. C. 777.

The foundation of Rome, B. C. 753.

And the era of Nabonasar, B. C. 747.

The commencement of the reign of Dioclesian is determined by the observed and calculated eclipses to be in the year A. D. 284. The beginning of the great Sothoic period of 1641, Sothoic or vague years, equivalent to 1640 Julian years, is fixed about the year B. C. 1321, or 1325. During this great embolismic period, the first day of the Egyptian year, called Thoth, from the omission of the intercalation of the quarter of a day in each year, recedes through every day of the year, till it arrives at the point whence it originally started, and again coincides with the Heliacal rising of the Dogstar.

Having thus brought down the ancient history of the world as contained in the fragments to the times of Grecian record, I shall endeavour, in like manner, to trace a faint outline of its Theology.

* pp. 328, 329.

† p. 328.

From Babel, the centre of their abominations, the heathens carried off the same objects of adoration, the same superstitious observances, and the same legendary tales, which, however varied and confused, may without difficulty be identified throughout the world. Among the pastoral tribes, the Scythic doctrines almost universally prevailed; yet in subsequent times they also fell into idolatry: while the Ionic nations carried their additions and corruptions to such a length, that the original and more simple doctrines became obliterated among the vulgar; and were retained only by the philosophers and priests, and sometimes were even re-imported from abroad. The more elaborate corruptions of Ionism appear to have prevailed originally in the Iranian territories only, and to have passed to India and to Egypt, to have spread themselves with civilization over Greece, and subsequently over the whole Roman world. By foreign conquest and other circumstances, the two systems were often amalgamated into one. The more elaborate and corrupted form of Ionism and idolatry would catch the attention of the casual observer as the religion of the land; while the deeper doctrines, which retained much of their primitive simplicity, were wrapped in mystery, and communicated only to the initiated.

Most nations, in process of time, became more attached to particular parts, and retained but

fragments of the general system. But it is still in existence, and preserved almost entire, both in its Scythic and Ionic form, as the Buddhism and Brahmenism of Hindostan. By comparing all the varied legends of the west and east in conjunction, we may obtain the following outline of the theology of the ancients.

It recognizes, as the primary elements of all things, two independent principles, of the nature of male and female. And these, in mystic union as the soul and body, constitute the great Hermaphroditic deity, the One, the Universe itself, consisting still of the two separate elements of its composition, modified, though combined in one individual, of which all things were regarded but as parts. From the two, or more frequently from the male, proceeded three sons or Hypos-tases ; which, when examined severally, are each one and the same with the principle from which they sprung : but when viewed conjointly, they constitute a triad, emanating from a fourth yet older divinity, who, by a mysterious act of self-triplication, becomes three, while he yet remains but one, each member of the triad being ultimately resolvable into the monad.* With this is connected the doctrine of a succession of similar worlds. At the conclusion of each revolving period, the world is dissolved, alternately by

* See Faber at length upon this subject, Pag. Id. Vol. II.

flood and fire ; and all its varied forms and parts are absorbed into the two primeval principles, which then remain in the loveliness of their existence. After a certain interval their re-union commences, and with it the reconstruction of another world. As before, the first production of this world is the triad, and the same heroes and persons re-appear ; and the same events are again transacted, till the time arrives for another dissolution. Such was the system in its original form ; it was a foundation of materialism, upon which was raised a superstructure of idolatry.

The most remarkable feature in the heathen theology is the multiplicity of its gods. The easy temper of polytheism, as it has been called, hesitated not to adopt the divinities of the surrounding nations ; while the deification, not only of heroes and kings, but of the virtues and vices, with the genii of the woods and waters, mountains and cities, contributed to introduce new and strange inmates into the Pantheon. But if we eject these modern intruders, if we restore to their original seats the imported deities, such as Pan to Arcadia, Hermes to Egypt, Osiris to Memphis, Hercules to Tyre, and Dionysus to India ; and if we investigate the origin of each, we shall find every nation, notwithstanding the variety of names, acknowledging the same deities and the same system of theology : and, however humble any of the deities may appear in the

Pantheons of Greece and Rome, each, who has any claim to antiquity, will be found ultimately, if not immediately, resolvable into the original God or Goddess, into one or other of the two primeval principles.

In conducting such an investigation, a very singular circumstance presents itself in the manifold character of these deities. Their *human* or *terrestrial* appearance, as mere mortals deified is the most obvious; as the sun, moon, elements, and powers of nature, they assume a *celestial* or *physical* aspect. And if we turn to the writings of the philosophers, we shall find them sustaining a character more abstract and *metaphysical*. Yet under all these different forms, the same general system is preserved.

In his *terrestrial* character, the chief Hero God, under whatever name, is claimed by every nation as its progenitor and founder. And not only is he celebrated as the king of that country in particular, but of the whole world. He is exposed to some alarming danger from the sea, or an evil principle or monster by which the sea is represented. He is nevertheless rescued by some friendly female aid, sometimes concealed in a cavern or in the moon, or preserved in a death-like sleep, borne upon a snake, or floating on an island or a lotus, though more frequently in a boat or ark. At length he awakens from his slumber, subdues his enemy, and lands upon a mountain.

He then reorganizes the world, and becomes himself the father primarily of three sons, and through them, of the human race ; not unfrequently with some allusions to the dove and rainbow. In fact, in his human character he was the great father of mankind ; but he may not only be identified with Noah but with Adam likewise. The one was looked upon as the re-appearance of the other, and both an incarnation of the Deity.

In his immediate *celestial* character the God is universally held to be the Sun ; but the character of the great Goddess is of a more complex description. As the companion of the man, she is the ark ; which was regarded not only as his consort, but his daughter, as the work of his own hands ; and his mother, from whose womb he again emerged, as an infant, to a second life ; and his preserver during the catastrophe of the deluge. As the companion of the Sun she is either the earth or moon : not that the distinctions between the human and celestial characters are accurately maintained ; for they are so strangely blended together, that the adventures applicable to one are frequently, and sometimes purposely, misapplied to the other. Thus, whilst the Man is said to have entered into, been concealed in, and have again issued from the ark, the moon, and the earth, indifferently, the Sun is fabled to have been plunged into the ocean, to have sailed upon a lotus, to have taken refuge in a floating

island, and to have dwelt upon a sacred mountain left dry by the retiring flood.*

It has been often remarked, that the Theogonies and Cosmogonies of the heathens were the same. In addition to those naturally constituting a part of the work, I have given the most remarkable of the Hermetic, Orphic, and Pythagorean accounts; which will be found, with the celebrated collection from Damascius, under a separate head.† By comparing these with the Cosmogonies of Sanchoniatho, Berossus, and the rest, we may, without much difficulty, arrive at the following conclusion: that the Ether and Chaos, or, in the language of the Philosophers, Mind and Matter, were the two primeval, eternal, and independent principles of the universe; the one regarded as a vivifying and intellectual principle, the other as a watery Chaos, boundless, and without form: both which continued for a time without motion, and in darkness. By a mystic union of the two was formed the great Hermaphroditic deity, the One, the universal World; of which the Chaotic matter presently became the body, and the Etherial Intellectual principle the soul. As soon as the union had commenced, from the Ether sprung forth the triad, Phanes or Eros, a triple divinity, the most prominent character of which was Light. He was the same with the Soul of the World, and the Intelligible

* See Faber, Pag. Id.

† p. 283, and following.

triad so largely insisted upon by the Platonists. The gross chaotic elements of Earth and Water were formed into the terraqueous globe, while the disposing Ether, in the character of Phanes, under some three of the conditions of Light, Air, Heat, Fire, Ether, Flame, or Spirit, composed a physical trinity centred in the Sun, the soul and ruler of the world. Or, according to the more refined speculations, it consisted of a trinity of mental powers, in which the Understanding, Reason or Intellect, the Soul, Passions, Feelings or Affections, Power, Counsel or Will, are variously combined. Viewed, therefore, either under a physical or metaphysical aspect, it is still a triad subordinate to, and emanating from the more ancient Intellectual Ether, and into which each person of the triad is again resolvable.*

With respect to the Physical triad, by comparing the heathen accounts with similar passages in the Scriptures, though not decisive, yet so preponderating does the evidence appear to me upon this point, that if the school of Hutchinson had not failed to establish their very elegant hypothesis, as to the fact that the Fire, Light, and Spirit or Air, were only three different conditions of one and the same ethereal fluid, appearing as Fire at the orb of the Sun, as Light pro-

* See the Inquiry at the end.

ceeding from it, and as Spirit returning to it, I should not have hesitated to subscribe to the opinion that such was the original trinity of the Gentiles; a triad, nevertheless, subordinate to a monad, which existed in the form of Ether previously to its assuming such conditions.

The Metaphysical speculations of the ancients upon this subject can only be derived by analogical reasoning from contemplation of the microcosm of man. To point out the close analogy preserved in this particular between the Metaphysical and Physical system before explained I would observe, that Man is a being compounded of an Intellectual, and of a Material substance, both of which were conceived by the ancients to have *pre-existed*, before they became united in the compound individual animal, the Man. When thus united, they appear to have conceived a triad of intellectual powers, the Intellect, the Affections Feelings or Emotions, and the Will or Power of action. But for further illustration of these matters, and for such proof as can be produced, I must refer to the disquisition at the end.

Upon this subject, therefore, I cannot agree with Mr. Faber in supposing that the trinitarian speculations of the Heathens originated in the coincidence of Adam and Noah being each the father of three sons; for of the three distinct analogical systems the Metaphysical, of the

Mind with its Faculties, and Matter,—the Physical, of the Ether with its conditions, and the Chaos,—and the Human, of the Patriarch with his three sons, and the universal mother the Ark or Earth,—the last analogy is not only the most imperfect, but according to all historical accounts, Demonolatry was introduced subsequently to the worship of nature and the elements.

From the widely dispersed traditions upon the subject, it is manifest that the circumstances of the creation and the deluge were well known to all mankind previously to the dispersion. And the writings of Moses give to the chosen people, not so much a new revelation as a correct, authenticated and inspired account of circumstances, which had then become partially obscured by time and abused by superstition. The formless watery Chaos and the Etherial substance of the heavens, enfolding and passing over its surface as a mighty wind, are the first principles both of the sacred and profane cosmogonies; but they are reclaimed by Moses as the materials, created by the immediate agency of an Almighty power. The subsequent process of formation so completely corresponds in both systems, that if they were not borrowed the one from the other, (a position which cannot be maintained,) they must each have been ultimately derived from the common source of revelation. Similar considerations upon the traditions of a Trinity, so universal

among the nations, and an examination of what that Trinity was composed, forces upon me the conviction, that the trinitarian doctrine, as it is now believed, was one of the original and fundamental tenets of the Patriarchal religion; that the analogy between the Microcosm, as pointed out, and the then current accounts of the creation, became the stumbling block, which set mankind to refine upon the truth; that hence they fell into the errors of attributing eternity to matter, of placing a Monad above the Trinity, with the Pantheistic opinion that the Deity was no other than the universe itself. The doctrine of the succession of worlds, the Metempsychosis, and Demonolatry would follow naturally enough by an extension of their system from the particular circumstances of the creation to those attendant upon the deluge. By the pride of false philosophy they forsook the truth of revelation, and sunk into materialism, into the worship of the elements, of man and beasts, and into idolatry with all its attendant abominations. 'When they knew God, they glorified him not as God; neither were thankful; but became vain in their imaginations, and their foolish heart was darkened. Professing themselves to be wise, they became fools; and changed the glory of the incorruptible God into an image made like to corruptible man, and to birds, and four-footed beasts, and creeping things. Wherefore, God

gave them up to uncleanness through the lusts of their own hearts.*

To reclaim a world so fallen, the great manifestations of the Almighty from time to time have taken place, not only at the most civilized as well as celebrated periods of history, but upon the spots then best calculated for the general dissemination of truth among the heathens. The geographical situation of Palestine, chosen it may be for the seat of universal empire, is the most remarkable upon earth for the facility of communication which it affords with every quarter of the globe. At the time of the Advent, it formed as it were the boundary of the rival empires of Rome and Parthia, subject to Rome, but holding an intimate connexion with its colonial offspring within the Parthian dominions. And its situation was at that time not more excellently adapted for the universal diffusion of the Gospel, both in the East and West, than it was for the general instruction of mankind, in times of old, when it formed so considerable a part of the high road of communication between the empires of Egypt and Assyria. About the time of the eighteenth dynasty, the most brilliant epoch of Egyptian history, the Exodus of the Israelites was effected : and the fame of the mi-

* Romans, i. 21.

raculous exploits of Moses and Joshua was wafted with the Danaan colonies to Greece, with the fugitive Canaanites to the West, and carried by the Israelites themselves into the East. During the revolutionary violence consequent upon the downfall of the ancient Assyrian empire, the same merciful Providence kept up a communication with the kingdoms which sprung out of its ruins, by the mission of Jonah to Nineveh, by the connexion of the princes of Samaria with Syria, and by the dispersion of the ten tribes over the territories of the Medes and Assyrians by Salmanasar: and upon the full re-establishment of the empire at Babylon, a knowledge of the truth was diffused far and wide by the captivity of the Jews themselves.

The conversion of Nebuchadnezzar, and the decrees of himself and his successors, both of the Assyrian and Persian line, in favour of the truth, must have been attended with at least some temporary effect upon the religious and philosophical sentiments of the East. And such an effect may be clearly traced in the very general reformation of the systems and superstitions which about this period took place.

Among the Persians, themselves a Scythic people, this reformation appears to have re-animated their zeal and enmity against the temples and idolatry of their Ionian rivals. It may also have led them to convert the two independent

principles of Mind and Matter into spiritual agents in opposition to one another, and to have revived the unmingled worship of the Sun and Fire, at first but as an emblem and image of the Supreme, though it soon again degenerated into the Sabaism of old. The reformation may be traced through Assyria, India, China and Egypt, and in those amendments and refinements which were shortly afterwards imported by Pythagoras into Greece.

A summary of the Pythagorean doctrines will be found in the commencement of the celebrated treatise of Timæus Locrus.* It may be observed, that the Pythagorean speculations have a tacit reference to the ancient classification of Causes, as the Efficient, the Formal or Ideal, the Material and the Final. In conformity to this division we find introduced between the two ancient independent principles of Mind and Matter, the world of Forms or abstract Ideas, to which is attributed an eternal subsistence, if not an existence independent of the Mind; whilst the *τὰγαθόν* Good in the abstract, the summum bonum, the great final cause, became the subject of perpetual discussion and inquiry among all succeeding philosophers.

The Forms and Matter were now substituted for the ancient Duad; superior to which was

* I have given it p. 301.

placed the Efficient Cause as the Monad, Deity, or Demiurgus. This Duad was, nevertheless, regarded as two eternal and independent principles, and by their combination the Deity formed the Sensible world, a living animal, composed of soul and body. Subordinate to the duad is the Pythagorean Triad, occupying the same relative situation with respect to the duad as in the more ancient systems. By this introduction of the Ideal world, and the elevation of the deity above the duad, the system lost something of the gross materialism which had hitherto obtained, but it lost, at the same time, all knowledge of the ancient triad, which was now replaced by such triads as were more conformable to the Pythagorean mode, and of which the persons were often subordinate to, or comprehended within each other, as genera and species.*

The doctrines of Plato differ only in refinement from the preceding. If we admit the Parmenides and the Timæus to embrace his complete system, God and Matter, two originally independent principles, are held to be, as it were, the extremities of that chain of being which composes the universe. Subordinate to the God, we have the Intelligible world of Ideas or the Forms, commencing, as the latter Platonists insist, with the Intelligible triad : but whether Plato regarded

* See the Pythagorean fragments, p. 301.

this world of Ideas in the abstract as subsisting only *within* the mind of the Deity, or whether he attributed to it a distinct existence* *without* the Mind, comprehending different orders of divine super-essential beings, may well be questioned. When the Deity or Demiurgus thought proper to compose the world, he looked to this ideal world as the exemplar, in whose likeness he constructed his new work. He impressed the disordered material Chaos with the Forms, and rendered the world a living animal, after the pattern of its ideal prototype, consisting of a soul endued with Intellect, and of a body of which all beings comprehended in it, Gods Men Animals or material species, are but the concrete individuals, of which the abstract ideas unalterably subsist in the intelligible world. Though still supposed to continue in existence, the Deity, as in the more ancient systems, retires as effectually from the stage as did the ancient Ether when superseded by the Phanes. And all the mundane operations are carried on as before, by the Soul of the world.

While the Stoics and other schools retained the ancient doctrines, and looked not further than

* Existence, according to the ancients, implies essence ; whereas the Ideal world was deemed super-essential : but I am compelled to use the words to make myself understood ; for the English language has not been sufficiently accommodated to these metaphysical subtleties of the Greeks to supply the requisite terms.

the world itself, it is true that the Pythagoreans and Plato held a God superior to the world; but it is extremely doubtful whether they entertained a sublimer conception of their great immediate efficient cause, the Soul of the world, or indeed of Soul in general, than the gross materialism of a subtile ether. They discouraged, likewise, the tenet of the succession of worlds; though it was subsequently revived by the later Platonists, by whom the Deity was supposed, at the predestined time, to swallow up the world, first the sensible, then the Ideal, and lastly Phanes the Intelligible triad, and to remain in the solitude of his unity.

Much as has been said upon the Platonic trinity, I must confess that I can find fewer traces of that doctrine in the writings of Plato than of his less refined predecessors, the mythologists. I have given such extracts as appear to me to relate to the subject, together with a fragment of Amelius* which expressly mentions the three kings of Plato as identical with the Orphic trinity. Dr. Morgan, in his essay upon the subject, satisfactorily refutes the notion, that Plato regarded the Logos as the second person of the trinity:†

* p. 305.

† The celebrated passage in the *Epinomis* of Plato *Ξυναποτε-
λῶν κόσμον ὃν ἔταξε λόγος ὁ πάντων θειότατος ὁρατόν*, usually rendered,
“Perfecting the visible world, which the word, the most divine
of all things, made,” refers to a very different subject. The
inquiry in this part of the dialogue relates to the knowledge of
number, without which it is asserted a man cannot have *λόγος*

and upon this refutation he denies that Plato held the doctrine at all, more particularly, as from the time of Plato to that of Ammonius Saccas in the third century, no disciple of his school seems to have been aware that such a doctrine was contained in his writings. Perhaps, however, we may trace some obscure allusions to it in the beginning of the second hypothesis of the Parmenides and in the passages which I have

reason; and if destitute of reason, he cannot attain wisdom. The God, which imparted to man the knowledge of numbers, is the Heaven, for there are eight powers contained in it akin to each other, that of the Sun, of the Moon, &c. to whom, he says, must be assigned equal honour—"For let us not assign to one the honour of the year, to another the honour of the month, and to others none of that portion of time, in which each performs its course in conjunction with the others, accomplishing that visible order which reason, the most divine of all things (or of the Universe,) has established.

The no less celebrated passage from the Philebus, "Ὅτι νοῦς ἔστι γενούσῃς τοῦ πάντων αἰτίου, by which it is supposed that the consubstantiality of the Logos with the first cause is asserted, relates to the *human mind*, and is the conclusion of an argument which proves, that as ordinary fire is derived from the elemental, and the human body from the elemental body of the world, *so is the human mind akin to, or of the same nature with the Divine mind, or Soul of the universe, the cause of all things.* These and other less celebrated passages of Plato, when examined in conjunction with this context, afford us, as Dr. Morgan justly observes, no more foundation for supposing that Plato held the doctrine of the Trinity than the following very curious passage, which he produces from Seneca, gives us ground to suppose that it was held by the Stoics: "Id actum est, mihi crede ab illo, quisquis formator universi fuit, sive ille *Deus* est

given;* though in the latter the doctrines appear rather to refer to the Monad and Duad than to the genuine trinity of the ancients. So far from any such doctrine being maintained by the Pythagoreans or in the Academy, we find only such vague allusions as might be expected among philosophers, who revered an ancient tradition, and were willing, after they had lost the substance, to find something to which they might attach the shadow.

The error which Dr. Morgan has refuted, took its rise with the fathers of the Church in the second century. They were led into the mistake by the word Logos, used by Plato and St. John, and made the Platonic Trinity to consist of God; the Logos, and the Soul of the world, and this in spite of all the professed followers of Plato, who, however they might vary among themselves, uniformly insisted upon placing the Mo-

potens omnium, sive incorporalis ratio ingentium operum artifex, sive divinus spiritus per omnia maxima minima, æquali intentione diffusus, sive fatum et immutabilis causarum inter se cohærentium series."† To the observations from Dr. Morgan's work, I may venture to add that the word Logos, as used by St. John and Plato, has two very distinct significations. By the latter, Reason in general is implied, whereas St. John uses it as a translation of the Hebrew *דבר*, the Word signifying also a thing or person revealed, and if at all in the sense of reason, which may be implied from the commentaries of the fathers, not for reason in general, but for the particular faculty so called.

nad and Duad, or at least a Monad, above their Triad.

In the first century of the Christian era, Philo, an Alexandrian Jew, had attempted to expound the Scripture on Platonic principles; and after the promulgation of the Gospel many of the fathers warmly adopted the same mode of exposition. The different sects of the Gnostics went far beyond the Grecian sage, and sought in the East the doctrines, to which they looked upon the writings of Plato merely as essays, introductory to the sublimer flights of the Oriental mysticism: and they treated his followers with that contempt, against which the vanity of a philosopher is seldom proof; and as long as these schools existed, a bitter enmity prevailed between them. The Gnostics gave at once a real *existence* to the Ideal world, and continuing the chain of being from the Supreme, through numerous orders of Eons, personified abstract ideas, of which the second and third persons of the Trinity were the first and second Eons, and from thence to the lowest material species, founded that daring heresy which so long disturbed the tranquillity of Christendom: and with this spurious Platonism of the fathers the Arian* heresy is likewise intimately connected.

* It is curious to observe the Arian and Orthodox illustrations of Eusebius and Epiphanius. The former illustrates the Trinity by the Heaven, the Sun, and the Spirit; or the Heaven, the

But the internal heresies of the Church were not the only ill effects which the misguided zeal of the fathers, in forcing upon Plato the doctrine of the Trinity, brought about. Though it is possible, that by pointing out some crude similarity of doctrine, they might have obtained some converts by rendering Christianity less unpalatable to the philosophical world of that day, yet the weapon was skilfully turned against them, and with unerring effect, when the Pagans took upon them to assert that nothing new had been revealed in Christianity; since, by the confessions of its very advocates, the system was previously contained in the writings of Plato.

In the third century, Ammonius Saccas, universally acknowledged to have been a man of consummate ability, taught that every sect, Christian, Heretic or Pagan, had received the truth, and retained it in their varied legends. He undertook, therefore, to unfold it from them all, and to reconcile every creed. And from his exertions sprung the celebrated Eclectic school of the later Platonists. Plotinus, Amelius, Olympius, Porphyrius, Jamblichus, Syrianus, and Proclus, were among the celebrated professors

Sun, and the Moon, the two latter as the leaders of innumerable host of spirits and stars, evidently derived from the prevailing notions of the Fathers relative to the Platonic trinity; whilst Epiphanius declares, that this great mystery is properly understood as Fire, Light, and Spirit or Air reveal it to us.

who succeeded Ammonius in the Platonic chair, and revived and kept alive the spirit of Paganism, with a bitter enmity to the Gospel, for near three hundred years. The Platonic schools were at length closed by the edict of Justinian; and seven wise men, the last lights of Platonism, Diogenes, Hermias, Eulalius, Priscianus, Damascius, Isidorus and Simplicius retired indignantly from the persecutions of Justinian, to realize the shadowy dreams of the republic of Plato, under the Persian despotism of Chosroes.*

From the writings of these philosophers is collected the bulk of the Oracles of Zoroaster.† A few of them were first published by Ludovicus Tiletanus at Paris, with the commentaries of Pletho, to which were subsequently added those of Psellus. Chief part of them, however, were collected by Franciscus Patricius, and published with the Hermetic books at the end of his *Nova Philosophia*. To the labours of Mr. Taylor we are indebted for the addition of about fifty more, and for the references to the works from whence all were extracted. I have arranged them according to the subjects, which are said to be occultly discussed in the *Parmenides* of Plato, viz. : Cause or God, the Ideal Intelligible or Intellectual world, Particular Souls, and the Material world. And I have placed under a

separate head the Magical and Philosophical precepts and directions. There can be no question but that many of these Oracles are spurious; all those, for instance, which relate to the Intelligible and Intellectual orders, which were confessedly obtained in answers given by dæmons, raised for that purpose by the Theurgists;* who, as well as all the later Platonists, made pretensions to magic, not only in its refinements, which they were pleased to designate Theurgy, but also in that debased form which we should call common witchcraft. Nevertheless, several of the Oracles seem to be derived from more authentic sources, and, like the spurious Hermetic books which have come down to us, probably contain much of the pure Sabiasm of Persia, and the doctrines of the Oriental philosophy.

I have thus endeavoured to give I fear a very imperfect outline of ancient history and theology. But, as it is intended rather to assist the reader through such an heterogeneous heap of materials, by bringing forward the most prominent parts and connecting them with one another, I trust its errors will be excused, as they may be corrected by the readers better judgment from the materials themselves before him. In closing the

subject, I beg to offer my sincerest thanks to Isaac Cullimore, Esq., to whose deep and extensive chronological researches, I am indebted for references to several very important passages in the following work, which had escaped my notice.

It is needless to take notice of the numerous forgeries, which have been issued as the productions of the authors of these fragments. There is a complete set, which was composed in Latin by Annii, a monk of Viterbo. But it is a singular circumstance, and one which might be urged with great force against the genuineness of almost the whole collection, that not only the original works have perished, but those also, through whose means these relics have been handed down. With the exception of these fragments, not only have Sanchoniatho, Berossus, and the rest passed into oblivion; but the preservers of their names have followed in the same track, and to a more unusual fate. The fragments of Philo, Abydenus, Polyhistor, Dios, and others, are generally not those of their own works, but extracts from their predecessors.

It is necessary also to advert to the numerous errors which will be found in every sheet. The fragments have been exposed to more than the common risks and accidents, to which all ancient writings have been subject. They have been either copied from the rude annals of anti-

quity, or sketched from historical paintings or hieroglyphic records, they have been sometimes translated from the sacred into the common language of the place, and again translated into Greek; then passed in citation from hand to hand, and lie widely scattered over the works principally of the fathers, and the writers of the Lower empire. It is matter of surprise then, not that they abound in error and uncertainty, but that so much of them has been preserved.

Several of these fragments are to be found in two or three different authors, each of whom contains a different version of the same, differing, not so much in the outline, and in the general flow of words, as in those technicalities and variations of termination, which were necessary to adapt them to the author's style; and it has been a source of some little perplexity to determine which of these various readings to prefer.

To Eusebius, Syncellus and Josephus, we are largely indebted for these relics of antiquity. For Josephus I have followed Hudson's edition. The Cologne edition of the *Præparatio Evangelica* of Eusebius is often considered the best: but upon close inspection and comparison I have been induced to prefer the text of Stephanus. With the exception of a mutilated translation into Latin by Hieronymus, Eusebius' Chronicle was lost. Under that title, however, Scaliger com-

piled a very portly folio, which, with some other Chronicles, contains a collection of all the fragments of the Greek text of Eusebius, that could be found. The recovery of the Armenian translation of this Chronicle is a great acquisition. It is regarded upon the Continent as perfectly authentic; but I am not aware that it has been examined or reviewed in England. To compress as much as possible all unnecessary observations upon the subject of materials, editions and abbreviations, I have given at the end a list of the authors cited, which will answer at once the several purposes of an index to the abbreviations, and to the editions I have used or referred to, as well as to the manuscripts and other sources from which some of those editions have been formed, or which have been consulted in the compilation of the work. I have likewise given it the form of a Chronological index, by adding the times in which the authors referred to flourished, that the reader may judge what degree of credit may be reposed in each.

The matter contained in these fragments is the only merit to which they can pretend. I have chosen what appeared to me the most genuine text, independent of all theory and system, and have given all the various readings of any consequence I have met with. I have retained Mr. Falconer's translation of Hanno's *Periplus*; and with this exception, and some few of the most

obscure of the oracles of Zoroaster, which are due to Mr. Taylor, I must be answerable for the rest. For the many errors in which they must abound, I beg leave to apologize and claim indulgence. The broken and confused state of many of the fragments, preclude the possibility of giving any translation, except upon conjecture. Many, such as the Orphic fragment from Malala,* and that from Amelius,† have exercised the talent and ingenuity of some of the ablest commentators, none of whom perhaps will be found to agree. In such cases, I have patiently compared their opinions, and endeavoured to investigate the circumstances under which the fragments were written and have been preserved, and what connexion they have with the passages among which they are introduced, and to give, what to the best of my judgment is, the truth.

At the conclusion of this work I have added a disquisition, which was originally designed merely to explain and illustrate what I conceive to have been the ancient Trinity of the Gentiles : but in the progress of inquiry I found it impossible to do justice to the opinion without speaking largely upon ancient and modern science. To compress it, therefore, as much as possible, and to give it something of a connected arrangement, I have thrown it altogether into the form of an inquiry

* p. 296.

into the Method, Objects and Result of ancient and modern Philosophy. And, as in this work I have endeavoured to bring forward several historical and theological documents, which had, in a manner, retired from public view, I trust that such an inquiry will not be deemed altogether misplaced, and that I shall be excused in an attempt to draw from the same store-house of antiquity some speculations, which have been too generally slighted or overlooked by the Metaphysician and the Philosopher, but which I believe may tend to the advancement of science, even amid the brilliant discoveries of modern times.

With respect to the fragments themselves, the classical reader will find, I fear, but poor amusement in perusing a half barbarous dialect, replete with errors and inconsistencies: to the student of divinity, however, they may not be altogether unacceptable or devoid of interest: and to the inquirer after ancient history and mythology, it must be useful to have collected into one small volume, the scattered relics for which he must otherwise search so widely.

HE supposes that the beginning of all things was a dark and condensed windy air, or a breeze of thick air and a Chaos turbid and black as Erebus: and that these were unbounded, and for a long series of ages destitute of form. But when this wind became enamoured of its own first principles (the Chaos), and an intimate union took place, that connexion was called Pothos:* and it was the beginning of the creation of all things. And it (the Chaos) † knew not its own production; but from its embrace with the wind was generated Môt; which some call Ilus (Mud), but others the putrefaction of a watery mixture. And from this sprung all the seed of the creation, and the generation of the universe.

* This union, among the Heathens, and particularly among the Phœnicians, was symbolized by an Egg enfolded by a Serpent, which *disjunctively* represented the Chaos and the Ether, but, when *united*, the hermaphroditic first principle of the Universe Cupid or Pothos.

And there were certain animals without sensation, from which intelligent animals were produced, and these were called Zophasemin, that is, the overseers of the heavens; and they were formed in the shape of an egg: and from Môt shone forth the sun, and the moon, the less and the greater stars.

And when the air began to send forth light, by its fiery influence on the sea and earth, winds were produced, and clouds, and very great defluxions and torrents of the heavenly waters. And when they were thus separated, and carried out of their proper places by the heat of the sun, and all met again in the air, and were dashed against each other, thunder and lightnings were the result: and at the sound of the thunder, the before-mentioned intelligent animals were aroused, and startled by the noise, and moved upon the earth and in the sea, male and female. (After this our author proceeds to say:) These things were found written in the Cosmogony of Taautus, and in his commentaries, and were drawn from his observations and the natural signs which by his penetration he perceived and discovered, and with which he has enlightened us.

Afterwards by Genus the son of Æon and Protogonus were begotten mortal children, whose names were Phôs, Pûr, and Phlox. These found out the method of producing fire by rubbing pieces of wood against each other, and taught men the use thereof.

These begat sons of vast bulk and height, whose names were conferred upon the mountains which they occupied: thus from them Cassius, and Libanus, and Antilibanus, and Brathu received their names.

Memrumus and Hypsuranius were the issue of these men by connexion with their mothers; the women of those times, without shame, having intercourse with any men whom they might chance to meet. Hypsuranius inhabited Tyre: and he invented huts constructed of reeds and rushes, and the papyrus. there were violent storms of rain and wind, the trees about Tyre being rubbed against each other, took fire, and all the forest in the neighbourhood was consumed. And Usous having taken a tree, and broken off its boughs, was the first who dared to venture on the sea. And he consecrated two pillars to Fire and Wind, and worshipped them, and poured out upon them the blood of the wild beasts he took in hunting: and when these men were dead, those that remained consecrated to them rods, and worshipped the pillars, and held anniversary feasts in honour of them.

And in times long subsequent to these; were born of the race of Hypsuranius, Agreus and Halieus, the inventors of the arts of hunting and fishing, from whom huntsmen and fishermen derive their names.

From Misor descended Taautus, who invented the writing of the first letters: him the Egyptians called Thoor, the Alexandrians Thoyth, and the Greeks Hermes. But from Sydyc descended the Dioscuri, or Cabiri, or Corybantes, or Samothracæ: these (he says) first built a ship complete.

From these descended others, who were the discoverers of medicinal herbs, and of the cure of poisons and of charms.

Contemporary with these was one Elioun, called Hypsistus, (the most high); and his wife named Beruth, and they dwelt about Byblus.

By these was begotten Epigeus, or Autochthon, whom they afterwards called Ouranus (Heaven); so that from him that element, which is over us, by reason of its excellent beauty is named heaven: and he had a sister of the same parents, and she was called Ge (Earth), and by reason of her beauty the earth was called by the same name.

But Ouranus, succeeding to the kingdom of his father, contracted a marriage with his sister Ge, and had by her four sons, Ilus who is called Cronus, and Betylus, and Dagon, which signifies Siton (Bread-corn,) and Atlas.

But by other wives Ouranus had much issue; at which Ge, being vexed and jealous of Ouranus, reproached him so that they parted from each other: nevertheless Ouranus returned to her, again by force whenever he thought proper, and having laid with her, again departed: he attempted also to kill the children whom he had by her; but Ge often defended her- self with the assistance of auxiliary powers.

But when Cronus arrived at man's estate, acting by the advice and with the assistance of Hermes Trismegis- tus, who was his secretary, he opposed himself to his father Ouranus, that he might avenge the indignities which had been offered to his mother.

And to Cronus were born children, Persephone and Athena; the former of whom died a virgin; but, by the advice of Athena and Hermes, Cronus made a scimitar and a spear of iron. Then Hermes addressed the allies of Cronus with magic words, and wrought

in them a keen desire to make war
against Ouranus in behalf of Ge. And
Cronus having thus overcome Ouranus
in battle, drove him from his kingdom,
and succeeded him in the imperial
power. In the battle was taken a well-
beloved concubine of Ouranus who was
pregnant; and Cronus bestowed her
in marriage upon Dagon, and, whilst
she was with him, she was delivered
of the child which she had conceived
by Ouranus, and called his name De-
marous.

After these events Cronus sur-
rounded his habitation with a wall,
and founded Byblus, the first city of
Phoenicia. Afterwards Cronus having
conceived a suspicion of his own bro-
ther Atlas, by the advice of Hermes,
threw him into a deep cavern in the
earth, and buried him.

At this time the descendants of the
DioscURI, having built some light and
other more complete ships, put to sea;
and being cast away over against
Mount Cassius, there consecrated a
temple.

But the auxiliaries of Ilus, who is
Cronus, were called Eloeim, as it were,
the allies of Cronus; being so called
after Cronus. And Cronus, having a

son called Sadidus, dispatched him with his own sword, because he held him in suspicion, and with his own hand deprived his child of life. And in like manner he cut off the head of his own daughter, so that all the gods were astonished at the disposition of Cronus.

But in process of time, whilst Ouranus was still in banishment, he sent his daughter Astarte, being a virgin, with two other of her sisters, Rhea and Dione, to cut off Cronus by treachery; but Cronus took the damsels, and married them notwithstanding they were his own sisters. When Ouranus understood this, he sent Eimarmene and Hora with other auxiliaries to make war against Cronus: but Cronus gained the affections of these also, and detained them with himself. Moreover, the god Ouranus devised Bætulia, contriving stones that moved as having life.

And by Astarte Cronus had seven daughters called Titanides, or Artemides; by Rhea also he had seven sons, the youngest of whom was consecrated from his birth; also by Dione he had daughters; and by Astarte again he had two other sons, Pothos and Eros.

(Then our historian, after some other things, goes on thus:) But Astarte called the greatest, and Demarous named Zeus, and Adodus who is entitled the king of gods, reigned over the country by the consent of Cronus: and Astarte put upon her head, as the mark of her sovereignty, a bull's head: and travelling about the habitable world, she found a star falling through the air, which she took up, and consecrated in the holy island of Tyre: and the Phœnicians say that Astarte is the same as Aphrodite.

Moreover, Cronus visiting the different regions of habitable world, gave to his daughter Athena the kingdom of Attica: and when there happened a plague with a great mortality, Cronus offered up his only begotten son as a sacrifice to his father Ouranus, and circumcised himself, and compelled his allies to do the same: and not long afterwards he consecrated after his death another of his sons, called

two reposing as at rest. And the
symbol was, that Cronus whilst he slept

respect to the wings, that he was fly-
ing whilst he rested, yet rested whilst
he flew. But for the other gods there
were two wings only to each upon his
shoulders, to intimate that they flew

there were also two wings upon the head, the one as a symbol of the intellectual part, the mind, and the other for the senses.

And Cronus visiting the country of the south, gave all Egypt to the god Taautus, that it might be his kingdom.

These things, says he, the Caberi, the seven sons of Sydyc, and their eighth brother Asclepius, first of all set down in the records in obedience to the commands of the god Taautus.

All these things the son of Thabion, the first Hierophant of all among the Phœnicians, allegorized and mixed up with the occurrences and accidents of nature and the world, and delivered to the priests and prophets, the superintendants of the mysteries: and they, perceiving the rage for these allegories increase, delivered them to their successors, and to foreigners: of whom one was Isiris, the inventor of the three letters, the brother of Chna who is called the first Phœnician.—*Euseb. BEROSSUS, in the first book of his history of Babylonia, informs us that he lived in the age of Alexander the son of Philip. And he mentions that there were written accounts, preserved at Babylon with the greatest care, comprehending a period of above fifteen myriads of years: and that these writings contained histories of the heaven and of the sea; of the birth of mankind; and of the kings, and of the memorable actions which they had achieved.

And in the first place he describes Babyloniā as a country situated between the Tigris and the Euphrates: that it abounded with wheat, and barley, and ocrus, and sesame; and that in the lakes were produced the roots called gongæ, which are fit for food,

and in respect to nutriment similar to

trees and apples, and a variety of
fruits; fish also and birds, both those
which are merely of flight, and those
which frequent the lakes. He adds,
that those parts of the country which
bordered upon Arabia, were without
water, and barren; but that the parts
which lay on the other side were both
hilly and fertile.†

At Babylon there was (in these
times) a great resort of people of
various nations, who inhabited Chal-
dæa, and lived in a lawless manner
like the beasts of the field.

In the first year there appeared,
from that part of the Erythræan sea
which borders upon Babylonia, an
animal destitute§ of reason, by name
Oannes, whose whole body (according
to the account of Apollodorus) was
that of a fish; that under the fish's
head he had another head, with feet
also below, similar to those of a man,
subjoined to the fish's tail. His voice
too, and language, was articulate and
human; and a representation of him
is preserved even to this day.

This Being was accustomed to pass the day among men; but took no food at that season; and he gave them an insight into letters and sciences, and arts of every kind. He taught them to construct cities, to found temples, to compile laws, and explained to them the principles of geometrical knowledge. He made them distinguish the seeds of the earth, and shewed them how to collect the fruits; in short, he instructed them in every thing which could tend to soften manners and humanize their lives. From that time, nothing material has been added by way of improvement to his instructions. And when the sun had set, this Being Oannes, retired again into the sea, and passed the night in the deep; for he was amphibious. After this there appeared other animals like Oannes, of which Berossus proposes to give an account when he comes to the history of the kings. Moreover Oannes wrote concerning the generation of mankind; and of their civil polity; and the following is the purport of what he said :

“ There was a time in which there existed nothing but darkness and an abyss of waters, wherein resided most

The person, who presided over
 them, was a woman named Omoroca;
 which in the Chaldaean language is
 Thalathth; § in Greek Thalassa, the
 sea; but which might equally be in-
 terpreted the Moon. All things being
 in this situation, Belus came, and cut
 the woman asunder: and of one half
 of her he formed the earth, and of the
 other half the heavens; and at the
 same time destroyed the animals
 within her.** All this (he says) was
 an allegorical description of nature.
 For, the whole universe consisting of
 moisture, and animals being conti-
 nually generated therein, the deity
 above-mentioned took off his own
 head: upon which the other gods
 mixed the blood, as it gushed out,
 with the earth; and from thence were
 formed men. On this account it is
 that they are rational, and partake of
 divine knowledge. This Belus, by
 whom they signify Jupiter,*** divided
 the darkness, and separated the
 Heavens from the Earth, and reduced
 the universe to order. But the ani-
 mals, not being able to bear the pre-
 valence of light, died. Belus upon

this, seeing a vast space unoccupied, though by nature fruitful, commanded one of the gods to take off his head, and to mix the blood with the earth; and from thence to form other men and animals, which should be capable of bearing the air.* Belus formed also the stars, and the sun, and the moon, and the five planets. (Such, according to Polyhistor Alexander, is the account which Berossus gives in his first book.)

(In the second book was contained the history of the ten kings of the Chaldæans, and the periods of the continuance of each reign, which consisted collectively of an hundred and twenty sari, or four hundred and thirty-two thousand years; reaching to the time of the Deluge. For Alexander, enumerating the kings from the writings of the Chaldæans, after the ninth Ardates, proceeds to the tenth, who is called by them Xisuthrus, in this manner:)

After the death of Ardates, his son Xisuthrus reigned eighteen sari. In his time happened a great Deluge; the history of which is thus described.

The Deity, Cronus, appeared to him
in a vision, and warned him that upon
the fifteenth day of the month Dæsius
there would be a flood, by which man-
kind would be destroyed. He there-
fore enjoined him to write a history
of the beginning, procedure, and con-
clusion of all things; and to bury it
in the city of the Sun at Sippara; and
to build a vessel, and take with him
into it his friends and relations; and
to convey on board every thing neces-
sary to sustain life, together with all
the different animals, both birds and
quadrupeds, and trust himself fear-
lessly to the deep. Having asked
the Deity, whither he was to sail? he
was answered, ¶ “ To the Gods:”
upon which he offered up a prayer
for the good of mankind. He then
obeyed the divine admonition: and
built a vessel five stadia in length, and
two in breadth. Into this he put
every thing which he had prepared;
and last of all conveyed into it his
wife, his children, and his friends.

thrus sent out birds from the ves-

any place whereupon they might rest
their feet, returned to him again.
After an interval of some days, he
sent them forth a second time; and
they now returned with their feet
tinged with mud. He made a trial a
third time with these birds; but they
returned to him no more: from whence
he judged that the surface of the
earth had appeared above the waters.
He therefore made an opening in the
vessel, and upon looking out found
that it was stranded upon the side of
some mountain; upon which he im-
mediately quitted it with his wife, his
daughter, and the pilot. Xisuthrus
then paid his adoration to the earth:
and having constructed an altar, of-
fered sacrifices to the gods, and, with
those who had come out of the vessel
with him, disappeared.

They, who remained within, find-

turn, quitted the vessel with many
lamentations, and called continually
on the name of Xisuthrus. Him they
saw no more; but they could distin-
guish his voice in the air, and could
hear him admonish them to pay due
regard to religion; and likewise in-

formed them that it was upon account
of his piety that he was translated to
live with the gods; that his wife and
daughter, and the pilot, had obtained
the same honour. To this he added,
that they should return to Babylonia;
and, as it was ordained, search for the
writings at Sippara, which they were
to make known to all mankind: more-
over that the place, wherein they then
were, was the land of Armenia. The
rest having heard these words, offered
sacrifices to the gods; and taking
a circuit, journeyed towards Baby-
lonia.

The vessel being thus stranded in
Armenia, some part of it yet remains
in the Corcyraean ¶ mountains of Ar-
menia; and the people scrape off the
bitumen, with which it had been out-
wardly coated, and make use of it by
way of an alexipharmic and amulet.
And when they returned to Babylon,
and had found the writings at Sippara,
they built cities, and erected temples:
and Babylon was thus inhabited again.

 makes the second Annedotus appear
 after twenty-six sari.) Then suc-

again from the Erythræan sea a fourth
Annedotus, having the same form
with those above, the shape of a fish
blended with that of a man. Then
reigned Euedorachus from Pantibi-

in his days there appeared another
personage from the Erythræan sea
like the former, having the same com-
plicated form between a fish and a
man, whose name was Odacon. (All
these, says Apollodorus, related par-
ticularly and circumstantially what-
ever Oannes had informed them of:
concerning these Abydenus has made
no mention.) Then reigned Amemp-

and he being the eighth in order
reigned ten sari. Then reigned
Otiartes, a Chaldæan, from Laranchæ;
and he reigned eight sari. And upon
the death of Otiartes, his son Xisu-

time happened the great deluge. So
that the sum of all the kings is ten;

 after the cessation of the rain Sisi-

 whether the flood had subsided. But
 the birds passing over an unbounded

Nabuchodonosor with a great army
against Egypt, and against Judea,
upon his being informed that they had
revolted from him; and by that means
he subdued them all, and set fire to
the temple that was at Jerusalem; and
removed our people entirely out of
their own country, and transferred
them to Babylon, and our city re-

rest of his baggage, to Babylonia: in the mean time with a few attendants he hastily crossed the desert to Babylon. When he arrived there he found that his affairs had been faithfully conducted by the Chaldæans, and that the principal person among them had preserved the kingdom for him: and he accordingly obtained possession of all his father's dominions. And he distributed the captives in colonies in the most proper places of Babylonia: and adorned the temple of Belus, and the other temples, in a sumptuous and pious manner, out of the spoils which he had taken in this war. He also rebuilt the old city, and added another to it on the outside, and so far completed Babylon, that none, who might besiege it afterwards, should have it in their power to divert the river, so as to facilitate an entrance into it: and he effected this by building three walls about the inner city, and three about the outer. Some of these walls he built of burnt brick and bitumen, and some of brick only. When he had thus admirably fortified the city, and had magnificently adorned the gates, he added also a new palace to those in which his forefathers had dwelt, adjoining them, but exceeding them in height and splendor.

Any attempt to describe it would be tedious: yet notwithstanding its prodigious size and magnificence it was finished within fifteen days. In this palace he erected very high walks, supported by stone pillars; and by planting what was called a pensile paradise, and replenishing it with all sorts of trees, he rendered the prospect an exact resemblance of a mountainous country. ABYDENUS, in his history of the Assyrians, has preserved the following fragment of Megasthenes, who says: That Nabucodrosorus, having become more powerful than Hercules, invaded Libya and Iberia, and when he had rendered them tributary, he extended his conquests over the inhabitants of the shores upon the right of the sea. It is moreover related by the Chaldæans, that as he went up into his palace he was possessed by some god; and he cried out and said: “ Oh! Babylonians, I, Nabucodrosorus, foretel unto you a calamity which must shortly come to pass, which neither Belus my ancestor, nor his queen Beltis, have power to persuade the Fates to turn away. And concerning the rebuilding of
Babylon by Nabuchodonosor, he writes
thus : It is said that from the begin-

sea : that Belus caused this state of
things to cease, and appointed to each
its proper place : and he surrounded
Babylon with a wall : but in process

 Nabuchodonosor walled it in again,
 and it remained so with its brazen

 he says: Nabuchodonosor having
 succeeded to the kingdom, built the
 walls of Babylon in a triple circuit in

 Armacale, a branch of the Euphrates,
 and the Acracanus: and above the
 city of Sippara he dug a receptacle

 which they irrigated the plains, and
 these they call Echetognomones

 and he adorned the palaces with trees,
 calling them hanging gardens.—

THERE is above Minyas in the land
of Armenia a very great mountain
which is called Baris ; to which, it is
said, that many persons retreated at
the time of the deluge, and were
saved ; and that one in particular was
carried thither in an ark, and was
landed on its summit, and that the
remains of the vessel were long pre-
served upon the mountain. Perhaps
this was the same individual of whom
Moses the legislator of the Jews has
made mention.—*Jos. Ant. Jud. I. 3.*
—*Euseb. Præp. Evan. 9.*

* Nicolaus Damascenus, a writer of Damascus about the age of Augustus. His fragments have been republished by Orellius. Leipzig.

† Baris signifies a ship. Walknaer's dissertation upon the word Baris may be found in the Preface to Valpy's edition of Stephans Thesaurus, p. 322. Epiphanius styles the mountain Lubar one of the mountains of Ararat; the Zendavesta calls it Albordi.

OF THE TOWER AND TITANIAN WAR:

FROM THE SIBYLLINE ORACLES.‡

Ἀλλ' ὅπῳταν μεγάλῳ Θεοῦ τελέωνται ἀπειλαί,

Χώρα ἐν Ἀσσυρίῃ ὁμίφωνοι δ' ἦσαν ἅπαντες,

BUT when the judgments of the Almighty God
Were ripe for execution; when the Tower
Rose to the skies upon Assyria's plain,

* In the Armenian “Deus autem omnipotens,” which agrees with the text of the Sibylline verses in the following page. Josephus and Eusebius have the plural Θεοί, Gods.

† The last paragraph is not in the Greek copies, but the Armenian is as follows:—“Post diluvium autem Titan et Prometheus exstiterunt; ubi quidem Titan adversus Cronum (scil. Saturnum) bellum movebat.”

‡ The translation is from the fourth volume of Bryant's *Mythology*, who has the following remarks upon the fragment.—“It has been borrowed by some Hellenistic Jew, or Gnostic, and inserted amid a deal of trash of his own composing. The superior antiquity of that part which I have laid before the reader, is plain from its being mentioned by Josephus. Some lines are likewise quoted by Athenagoras, and Theophilus Antiochenus. But there are passages afterwards which relate to circumstances of late date; such as were in time much inferior to the age of Athenagoras; and still farther removed from the æra of Josephus.”

Καὶ βούλont' ἀναβῆν' εἰς οὐρανὸν ἀστερόεντα,
 Αὐτίκα ἀθάνατος (μεγάλην ἐπέθηκεν ἀνάγκην)*
 Πνεύμασιν. αὐτὰρ ἔπειτ' ἀνεμοὶ μέγαν ὑψόδι πύργον
 ῥίψαν, καὶ θνητοῖσιν ἐπ' ἀλλήλοισι ἔριν ὤρσαν,
 Τοῦνεκά τοι Βαβυλῶνα βροτοὶ πόλει οὐνομ' ἔθεντο.
 Αὐτὰρ ἐπεὶ πύργος τ' ἔπεσε, γλῶσσαι τ' ἀνθρώπων
 Παντοδαπαῖς φωναῖσι διέστρεφον, αὐτὰρ ἅπασα
 Γαῖα βροτῶν πληροῦτο μεριζομένων βασιλῆων.

And all mankind one language only knew :
 A dread commission from on high was given
 To the fell whirlwinds, which with dire alarms
 Beat on the Tower, and to its lowest base
 Shook it convulsed. And now all intercourse,
 By some occult and overruling power,
 Ceased among men : by utterance they strove
 Perplexed and anxious to disclose their mind ;
 But their lip failed them ; and in lieu of words
 Produced a painful babbling sound : the place
 Was thence called Babel ; by th' apostate crew
 Named from the event. Then severed far away
 They sped uncertain into realms unknown :
 Thus kingdoms rose ; and the glad world was filled.

She then mentions Cronus, Titan, and Jäpetus, as the three sons
 of the patriarch governing the world in the tenth generation
 after the deluge, thus,

Καὶ τότε δὴ δεκάτῃ γενεῇ μερόπων ἀνθρώπων,
 Ἐξ οὗπερ κατακλυσμὸς ἐπὶ προτέρους γένετ' ἄνδρας,
 Καὶ βασίλευσε Κρόνος, καὶ Τιτᾶν, Ἰαπετός τε,

The triple division of the earth is afterwards mentioned, over
 which each of the patriarchs ruled in peace.

Τρίσσαι δὴ μέριδες γαίης κατὰ κλῆρον ἐκάστοῦ,

* Omitted in Gallæus ; Bryant inserts it.

Καὶ βασίλευσεν ἕκαστος ἔχων μέρος, οὐδὲ μάχοντο·

Then the death of Noah, and lastly the war between Cronus and Titan.

Καὶ μαχέσταντο Κρόνος Τιτάν τε πρὸς αὐτούς.

OF SCYTHISM AND HELLENISM.

FROM EPIPHANIUS.*

ΠΡΩΤΟΝ μὲν αἱ τῶν αἱρέ-
σεων πασῶν μητέρες τε καὶ
πρωτότυποι καὶ ὀνομασίαι,
ἐξ ὧν μητέρες πέντε αἱ ἄλλαι
ἐφύησαν, καὶ εἰσιν αὗται πρῶ-
ται τέσσαρες.

Πρώτη, Βαρβαρισμός, ἥ τις
καθ' ἑαυτήν ἐστι, διαρχέσα-
σα ἀφ' ἡμερῶν τοῦ Ἀδὰμ ἐπὶ
δέκα γενεάς, ἕως τοῦ Νῶε.
Βαρβαρισμός δὲ κέκληται, ἀπὸ
τοῦ μὴ τοὺς ἀνθρώπους ἀρχη-
γόν τινα ἔχειν, ἢ μίαν συμφω-
νίαν, ἀλλ' ὅτι πᾶς τις ἑαυτῷ

βουλήματος ἐγίνετο.

THE parents of all the heresies, and
the prototypes from which they de-
rive their names, and from which all
other heresies originate, are these
four primary ones.

The first is Barbarism,† which pre-
vailed without a rival from the days of
Adam through ten generations to the
time of Noah. It is called Barbarism,
because men had no rulers, nor sub-
mitted to any particular discipline
of life; but as each thought proper
to prescribe to himself, so he was
at liberty to follow the dictates of
his own inclination.

* The following extract from Epiphanius is given also in the Paschal Chronicle in disjointed fragments. I have endeavoured to give the spirit of it as it may be gathered from a comparison of Epiphanius, Cedrenus and the Paschal Chronicle.

† Qy. Patriarchism?

Δευτέρα Σκυθισμὸς ἀπὸ τῶν ἡμερῶν τοῦ Νῶε, (μετὰ τὸν κατακλυσμὸν, καὶ μετέπειτα) ἄχρι τῆς τοῦ πύργου οἰκοδομῆς καὶ Βαβυλῶνος. καὶ μετὰ τὸν τοῦ πύργου χρόνον ἐπὶ ὀλίγοις ἔτεσιν, τουτέστι Φαλὲκ καὶ Ῥαγαῦ. Οἱ τινες ἐπὶ τὸ τῆς Εὐρώπης κλῖμα νευνότεες τῷ τῆς Σκυθίας μέρει, καὶ τοῖς αὐτῶν ἔδεσι προσεκρίθησαν, ἀπὸ τῆς τοῦ Θήρα ἡλικίας, καὶ ἐπέκεινα· ἐξ οὗπερ οἱ Θρᾶκες γεγόνασι.

Τρίτη, Ἑλληνισμὸς ἀπὸ τῶν χρόνων τοῦ Σερούχ· ἐναρξάμενος, διὰ τοι τῆς εἰδωλολατρίας, καὶ ὥς ἐστοίχουντο* τηνικαῦτα ἕκαστος κατὰ τινὰ δεισιδαιμονίαν, ἐπὶ τὸ μᾶλλον πολυτικώτερον καὶ ἐπὶ ἔθῃ, καὶ δεσμοὺς εἰδώλων τάττεσθαι τὰ τῶν ἀνθρώπων γένη. Οἷς τότε στοιχήσαντες ἐποίουν† διὰ χρωμάτων γράφοντες τὴν ἀρχὴν, καὶ ἀπεικάζοντες‡ τοὺς πάλαι παρ' αὐτοῖς τετιμημένους, ἢ τυράννους ἢ ἡγεμόνας, ἢ τινὰς τι δράσαντας ἐν τῷ βίῳ, μνήμης τι δοκοῦν ἄξιον δι' ἀλλοκῆς τε, ἢ σωμάτων εὐρωστίας.

The second is Scythism which prevailed from the days of Noah and thence downwards to the building of the tower and Babylon, and for a few years subsequently to that time, that is to the days of Phalec and Ragau. But the nations which incline upon the borders of Europe continued addicted to the Scythic heresy, and the customs of the Scythians to the age of Thera, and afterwards; of this sect also were the Thracians.

The third is Hellenism, which originated in the days of Seruch with the introduction of idolatry: and as men had hitherto followed each some demonolatrour superstition of his own, they were now reduced to a more established form of polity, and to the rites and ceremonies of idols. And the followers of this began with the use of painting, making likenesses of those whom they had formerly honoured, either kings or chiefs, or men who in their lives had performed actions which they deemed worthy of record, by strength or excellence of body.

* Epiphanius divides the word thus, ἐστοίχουν τὸ, and in the following passage places the full stop after δεσμοὺς, and a comma after γένη, introducing after εἰδώλων the words μὲν τοί γε ἐναρξάμενα. I have in the whole passage followed the Paschal Chronicle.

The Egyptians, and Babylonians,
and Phrygians, and Phœnicians were
the first propagators of this supersti-
tion of making images, and of the
mysteries : from whom it was trans-
ferred to the Greeks from the time
of Cecrops downwards. But it was
not till afterwards and at a consi-
derable interval that Cronus and
Rhea, Zeus and Apollo, and the rest
were esteemed and honoured as
gods.

The following extract is given in Epiphanius preceding the
above.

AND from the times of Tharra the
father of Abraham, they introduced
images and all the errors of idola-
try ; honouring their forefathers, and
their departed predecessors with
effigies which they fashioned after
their likeness. They first made
these effigies of earthen ware, but
afterwards according to their dif-
ferent arts they sculptured them in
stone, and cast them in silver and
gold, and wrought them in wood,
and all kinds of different materials.

OF the tribe of Japhet was born
 Seruch, who first introduced Hel-
 lenism and the worship of idols. For
 he and those who concurred with
 him in opinion honoured their pre-
 decessors whether warriors or leaders,
 or characters renowned during their
 lives for valour or virtue with co-
 lumnar statues, as if they had been
 their progenitors, and tendered to
 them a species of religious veneration
 as a kind of gods and sacrificed. But
 after this their successors, overstep-
 ping the intention of their ancestors
 that they should honour them as their
 progenitors and the inventors of
 good things with monuments alone,
 honoured them as heavenly gods
 and sacrificed to them as such. And
 the following was the form of their
 canonization: they inscribed their
 names after their decease in their
 sacred books and established a festi-
 val to each at certain seasons, saying
 that their souls had departed to the
 islands of the blessed and were never
 condemned or burnt with fire.

THE city of Babylon owes its founda-
tion to those who were saved from
the catastrophe of the deluge: they
were the Giants, and they built the
tower which is noticed in history.
But the tower being overthrown by
the interposition of God, the Giants
were scattered over all the earth.

He says moreover that in the tenth
generation in the city Camarina of
Babylonia, which some call the city
Urie, and which signifies a city of the
Chaldæans, the thirteenth in descent
lived Abraham, of a noble race, and
superior to all others in wisdom; of
whom they relate that he was the in-
ventor of astrology and the Chaldæan
magic, and that on account of his
eminent piety he was esteemed by
God. It is further said, that under
the directions of God he removed and
lived in Phœnicia, and there taught
the Phœnicians the motions of the
sun and moon and all other things;
for which reason he was held in great
reverence by their King.—*Euseb.*

OF THE ASSYRIAN EMPIRE:

FROM CTESIAS.

ΠΑΡΑΠΛΗΣΙΩΣ δὲ τούτῳ καὶ οἱ λοιποὶ βασιλεῖς, παῖς παρὰ πάτρός διαδεχόμενος τὴν ἀρχὴν, ἐπὶ γενεὰς τριάκοντα ἐβασίλευσαν, μέχρι Σαρδαναπάλου. IN like manner all the other kings succeeded, the son receiving the empire from his father, being altogether thirty in their generations to Sardanapalus. In his time the empire passed to the Medes from the Assyrians, having remained with them upwards of 1360* years, according to the account of Ctesias the Cnidian, in his second book.—*Diod. Sic. lib. II. p. 77.*

FROM DIODORUS SICULUS.

IN the manner above related, the empire of the Assyrians, after having continued from Ninus thirty descents, and more than 1400 years, was finally dissolved by the Medes.—*Diod. Sic. lib. II. p. 81.*

THE Medes were the first who began the revolt from the Assyrians after they had maintained the dominion over Upper Asia for a period of 520 years.—*Lib. I. c. 95.*

OF NABOPOLASAR :

FROM ALEXANDER POLYHISTOR.*

TOTTON (Ναβοπολάσαρον) NABOPOLASAR, whom Alexander Polyhistor calls Sardanapallus, sent to Astyages the Satrap of Media, and demanded his daughter Amuïtes in marriage for his son Nabuchodonosor. He was the commander of the army of Saracus King of the Chaldæans, and, having been sent upon some expedition, turned his arms against Saracus and marched against the city of Ninus (Nineveh). But Saracus confounded by his advance set fire to his palace and burnt himself in it. And Nabopolasar obtained the empire of the Chaldæans: he was the father of Nabuchodonosor.—*Euseb. Chron.* 46.

A Xisuthro vero, et a diluvii tempore usque ad illud, quo Medi Babylonem ceperunt, reges omnino LXXXVI. Polyhistor recenset, atque unumquemque ex Berossi volumine nominatim memorat: tempus vero omnium eorum numero annorum trium myriadum et tribus milibus uno et nonaginta comprehendit. Deinde vero post eos, cum ita firmiter stabiliti erant, repente Medi copias adversus Babylonem comparabant, ut caperent eam, atque ex se ipsis Tyrannos ibi constituerent.

Deinde nomina quoque Medorum tyrannorum ponit, VIII. numero: quorum anni ccxxiv et rursum reges undecim, annosque... Postea Chaldæorum reges XLIX, et annos CCCCLVIII. Deinde Arabum IX reges, et annos CCXLV. Post quos annos etiam ipsam Semiramidem in Assyrios dominatam esse tradit. Atque iterum minute enumerat nomina regum XLV, adsignans illis annos DXXVI.

Chaldæans during a period of four neri. And he was succeeded by his son Comosbelus, who held the empire four neri and five sossi. But from the time of Xisuthrus and the deluge, to that at which the Medes took possession of Babylon, there were altogether eighty-six kings. Polyhistor enumerates and mentions each of them by name from the volume of Berossus: the duration of the reigns of all which kings comprehends a period of thirty-three thousand and ninety-one years. But when their power was thus firmly established, the Medes suddenly levied forces against Babylon to surprise it, and to place upon the throne kings chosen from among themselves.

He then gives the names of the Median Kings, 8 in number, who reigned during the period of 224 years: and again 11 Kings during years. Then 49 Kings of the Chaldæans 458 years. Then 9 Kings of the Arabians 245 years. After all these successive periods of years he states that Semiramis reigned over the Assyrians. And again minutely enumerates the names of 45

Kings, assigning to them a term of 526 years. After whom, he says there was a King of the Chaldæans, whose name was Phulus: Of whom also the historical writings of the Hebrews make mention under the name of Phulus (Pul) who they say invaded the country of the Jews.—*Eu. Ar. Chron.* 39.

OF SENECHERIB:

FROM ALEXANDER POLYHISTOR.

POSTQUAM regnasset frater Senacharibi, et deinde postquam Acises in Babylonios dominatus esset, et nec dum triginta quidem diebus regnum tenuisset, a Marodach Baladano occisus est; et Marodach Baladanus per vim (regnum) tenuit sex mensibus: eum vero interficiens regnabat quidam cui nomen Elibus. Verum tertio regni ejus anno Sennecheribus rex Assyriorum exercitum conflabat adversus Babylonios, proelioque cum iis commisso vicit, et captum una cum amicis, in terram Assyriorum perducere jussit. In Babylonios ergo

AFTER the reign of the brother of Senecherib, Acises reigned over the Babylonians, and when he had governed for the space of thirty days, he was slain by Marodach Baladanus, who held the empire by force during six months: and he was slain and succeeded by a person named Elibus. But in the third year of his reign Senecherib king of the Assyrians levied an army against the Babylonians; and in a battle, in which they were engaged, routed, and took him prisoner with his adherents, and commanded them to be carried into the land of the Assyrians. Having taken upon himself the

dominatus, regem eis filium suum Asordanium constituit; ipse vero recedens terram Assyriorum petiit.

Quum autem ille fama accepisset Græcos in Ciliciam bellimovendi causa pervenisse, ad eos contendit; aciem contra aciem instruit, ac plurimis quidem de suo exercitu cœsis hostes (tamen) debellat atque in victoriæ monumentum imaginem suam eo in loco erectam reliquit, Chaldaicisque litteris fortitudinem suam ad futuri temporis memoriam incidi jussit. Et Tarsum urbem, inquit, ipse ad similitudinem Babylonis condidit, quam appellavit Tharsin. Et post omnia facta Sinnecherimi illud quoque addens, ait eum XVIII annis vixisse (in imperio); et per insidias quas illi paravit filius Ardumusanus, e vita excessisse.

government of the Babylonians, he appointed his son Asordanius their king, and he himself retired again into Assyria.

When he received a report that the Greeks had made a hostile descent upon Cilicia, he marched against them and fought with them a pitched battle, in which, though he suffered great loss in his own army, he overthrew them, and upon the spot he erected the statue of himself as a monument of his victory; and ordered his prowess to be inscribed upon it in the Chaldæan characters, to hand down the remembrance of it to posterity. He built also the city of Tarsus after the likeness of Babylon, which he called Tharsis. And after enumerating the various exploits of Sinnecherim, he adds that he reigned 18 years, and was cut off by a conspiracy which had been formed against his life by his son Ardumusanus.—*Eu. Ar. Chron.*

OF SENECHERIB AND HIS SUCESSORS:

FROM ALEXANDER POLYHISTOR.

Ac post eum Senecheribum Polyhistor fuisse regem ait. p. 41.

(Tamen Sinecherib ipsum, et filium ejus Asordanum, ac Marodach Baladanum, Chaldæus quoque historicus commemorat, cum illis etiam Nabuchodonosorum.) p. 42.

Regnavit Sinecherim, ut Polyhistor exponit, annis XVIII. et post eum ejusdem filius annis VIII. Postea vero Sammuges annis XXI. et frater ejus annis XXI. Ac deinde Nabupalsar annis XX. et post eum Nabucodrossorus annis XLIII. (A Sinecherimo usque ad Nabucodrossorum comprehenduntur anni omnino LXXXVIII.) p. 44.

Post Samugen vero Sardanapallus Chaldæus regnavit annis XXI. Hic exercitum Astyagi Medo, familiæ Principi ac Satrapæ, auxilio misit, ut Amuhean Astyagis filiam Nabucodrossoro filio suo uxorem daret. Ac deinde regnavit Nabucodrossorus annis XLIII, et

AND after him (Pul) according to Polyhistor, Senecherib was king.

(The Chaldæan historian also makes mention of Senecherib himself, and Asordanus his son, and Marodach Baladanus, as well as Nabuchodonosorus.)

And Sinecherim reigned eighteen years; and after him his son eight years. Then reigned Sammuges twenty-one years, and likewise his brother twenty-one years. Then reigned Nabupalsar twenty years, and after him Nabucodrossorus forty-three years. (Therefore, from Sinecherim to Nabucodrossorus is comprehended a period altogether of eighty-eight years.)

After Samuges, Sardanapallus the Chaldæan, reigned twenty-one years. He sent an army to the assistance of Astyages the Mede, Prince and Satrap of the family, that he might give the Amuhean daughter of Astyages to his son Nabucodrossorus. Then reigned Nabucodrossorus

contractis copiis veniens captivos duxit Judæos et Phœnices ac Syros.

Et post Nabucodrossorum regnavit filius ejus Amilmarudochus, annis XII.... Postque illum in Chaldæos regnavit Neglisarus annis IV. et postea Nabodenus annis XVII. Sub quo Cyrus Cambysis (filius) exercitum duxit in terram Babyloniorum. Cui obviam ivit Nabodenus, atque victus fugæ se dedit: et regnavit Babylone Cyrus annis IX. Deinde in campo Daas altero certamine inito mortuus est. Post quem Cambyses regnat annis VIII. ac deinde Darius annis XXXVI. post quem Xerxes cæteri quoque Persarum reges. p. 44.

forty-three years; and he came with a mighty army, and led the Jews, and Phœnicians, and Syrians into captivity.

And after Nabucodrossus reigned his son Amilmarudochus, twelve years.... And after him Neglisarus reigned over the Chaldæans four years; and then Nabodenus seventeen years. In his reign Cyrus, the son of Cambyses, invaded the country of the Babylonians. Nabodenus went out to give him battle, but was defeated, and betook himself to flight: and Cyrus reigned at Babylon nine years. He was killed, however, in another battle, which took place in the plain of Daas. After him reigned Cambyses eight years; then Darius thirty-six years; after him Xerxes and the other kings of the Persian line.—*Eu. Ar. Chron.* pp. 41, 42. 44, 45.

OF SENECHERIB AND HIS SUCCESSORS :

FROM ABYDENUS.

EODEM tempore vicessimus quintus utique Senecherib ipse ex regibus vix demum inventus est, qui Babylonem sub ditionem redigens subegit, et ad litus maris Ciliciæ Græcorum classem profligatam depressit; condiditque templum Athenarum, statuas æreas erexit, litterisque sane, inquit, suam fortitudinem exaravit; et Tarsum ad figuram et similitudinem Babylonis ædificavit; ut Tarsum Cydnus flumen interflueret, Euphratis nimirum more Babylonem interfluentis.

Ex ordine autem post eum Nergillus regnavit, qui a filio Adramelo est interemptus: et ipsum quoque frater ejus Axerdis ex eodem patre, non autem ex eadem matre, occidit; et exercitum persequutus in Byzantinorum urbem includit. Qui primus mercenarios milites sibi collegit; quorum unus Pythagoras fuit, Chaldæorum sapientiæ discipulus. Axerdis autem Ægyptum partesque

At the same time the twenty-fifth who was Senecherib can hardly be recognized among the kings. It was he who subjected the city of Babylon to his power, and defeated and sunk a Grecian fleet upon the coast of Cilicia. He built also a temple at Athens and erected brazen statues, upon which he engraved his own exploits. And he built the city of Tarsus after the plan and likeness of Babylon, that the river Cydnus should flow through Tarsus, in the same manner as the Euphrates intersected Babylon.

Next in order after him reigned Nergillus who was assassinated by his son Adramelus: and he also was slain by Axerdis (his brother by the same father, but of a different mother,) and his army pursued and blockaded in the city of Byzantium. Axerdis was the first that levied mercenary soldiers, one of whom was Pythagoras a follower of the wisdom of the Chaldæans: he also reduced under his dominion Egypt

Syriæ inferioris in suam potestatem redegit; ex qua Sardanapallus quoque extitit.

Post quem Saracus in Assyrios regnavit: et quum compertum habuisset, multitudinem barbarorum maximam e mari exisse, ut impetum faceret, Busalossorum ducem confestim Babylonem misit. Ille autem consilio rebellionis inito, Amuhean Astyagis Medi familiæ Principis filiam Nabuchodrossoro suo filio uxorem despondit. Ac deinde protinus discedens accelerat aggredi Ninum, id est, urbem Ninive. Cum autem de his omnibus certior est factus Saracus Rex, concremavit regiam aulam Evoriti.† Nabuchodrossorus verò accipiens regni imperium, valido muro Babylonem cinxit.

and the country of Cælo-Syria, from whence came Sardanapallus.*

After him Saracus reigned over the Assyrians, and when he was informed that a very great multitude of barbarians had come up from the sea to attack him, he sent Busalossorus as his general in haste to Babylon. But he, having with a treasonable design obtained Amuhean, the daughter of Astyages the prince of the Medes, to be affianced to his son Nabuchodrossorus, marched straightways to surprise the city of Ninus, that is Nineveh. But when Saracus the king was apprized of all these proceedings he burnt the royal palace. And Nabuchodrossorus succeeded to the empire and surrounded Babylon with a strong wall.—*Eu. Ar. Chron.* 53.

* The name Sardanapallus is indiscriminately applied to various persons. Here perhaps Saracus may be intended; but from the fragment p. 59, most probably Busalossorus, i. e. Nabopolassar. The passage then in the text may refer to the dominion (potestatem) of Axerdis, "from which Sardanapallus revolted."

† The Armenian Editor in a note complains of the obscurity of this passage in the original, and thinks it may be translated "Condonavit regiam aulam Evoriti," entrusted the palace to some officer named Evorites. In some authors the daughter of Astyages is named Aroites: and it might possibly refer to her, if the word were read in conjunction with the subsequent sentence. See *Frag.* p. 59.

OF BELUS AND THE ASSYRIAN EMPIRE:

FROM CASTOR.

BELUS, inquit, rex erat Assyriorum: et sub eo Cyclopes Jovi decertanti adversus Titanos, per fulgura fulminaque ignea opem in prælio tulerunt. Eo autem tempore Titanorum reges agnoscebantur; quorum unus erat Ogygus rex. Paucis vero interjectis, prosequitur, dicens: Gigantes in Deos irruentes, perempti sunt, auxilium Diis ferentibus Hercule et Dionysso, qui ex Titanis erant.

Belus de quo antea diximus, vitam finivit, quin et Deus habitus est. Post quem Ninus imperavit Assyriis annis LII. Hic uxorem duxit Semiramidem. Post eumque Semiramis ipsa in Assyrios regnavit annis XLII. Deinde vero Zames, qui etiam Ninyas. (Et continuo singulos Assyriorum reges, qui post eos fuerunt, in ordinem redigens, ad Sardanapallum usque recenset, cunctos nominatim commemorando: quorum etiam nos utique nomina,

BELUS (says Castor) was king of the Assyrians; and under him the Cyclops assisted Jupiter with thunder-bolts and lightnings in his contest with the Titans. At that time there were kings of the Titans, one of whom was Ogygus. (After a short digression he proceeds to say, that) the Giants, in their attempted inroad upon the Gods, were slain by the assistance of Hercules and Dionysus, who were themselves of the Titan race.

Belus, whom we have mentioned above, after his death was esteemed a God. After him, Ninus reigned over the Assyrians fifty-two years. He married Semiramis, who, after his decease, reigned over the Assyrians forty-two years. Then reigned Zames, who is Ninyas. (Then he enumerates each of the successive Assyrian kings in order, and mentions them all, down to Sardanapallus, by their respective names: whose names, and the length of their reigns, we shall

regnique tempora paulo post adponemus. Siquidem et ille in Canone suo his verbis de ipsis scribit).

Primo Assyriorum reges digessimus, initium a Bels facientes: quum vero ipsius regni annos vix certo traditos habeamus, nomen solummodo commemoravimus: sed tamen chronologiæ principium a Nino duximus et in alterum Ninum, qui regnum a Sardanapallo accepit, desinimus: utpote hoc pacto perspicuum esset tam universi temporis, quam singulorum regum (temporis) spatium; hoc itaque modo reperitur tempus annorum M, ducentorum et octoginta.

also give presently. Castor mentions them in his canon in the following words.*)

We have first digested into a canon the kings of the Assyrians, commencing with Belus: but since we have no certain tradition respecting the length of his reign, we have merely set down his name, and commenced the chronological series from Ninus; and have concluded it with another Ninus, who obtained the empire after Sardanapallus; that in this manner the whole length of the time, as well as of the reigns of each king, might be plainly set forth. Thus it will be found, that the complete sum of the years amounts to 1280.—*Eus. Ar. p. 81.*

* The passage above is thus cited by Syncellus, p. 206.

..... ὡς που καὶ Κάστωρ ἐν τῷ κανόνι αὐτοῦ φησιν ὧδε.

The conclusion also is thus given by Syncellus, p. 168.

Τῷ Κάστωρι μᾶλλον ἀκολουθήσας (Εὐσέβιος) οὗ καὶ μαρτυρίαν παρήγαγε ἁσπ' ἣν φάσκουσιν τοὺς Ἀσσυρίων βασιλεῖς ἄρξαι.....

OF THE ASSYRIAN EMPIRE :

FROM VELLEIUS PATERCULUS AND AEMILIUS SURA.

INSEQUENTITEMPORE imperium Asiaticum ab Assyriis, qui id obtinuerant annis MLXX, translatum est ad Medos ab hinc annis ferme DCCCLXX. Quippe Sardanapalum eorum regem mollitiis fluentem, et nimium felicem malo suo, tertio et tricesimo loco ab Nino et Semiramide, qui Babylona condiderant, natum, ita ut semper successor regni paterni foret filius, Arbaces Medus imperio vitæque privavit. . . . Æmilius Sura de annis populi Romani: "Assyrii principes omnium gentium rerum potiti sunt, deinde Medi, postea Persæ, deinde Macedones. Exinde duobus regibus, Philippo et Antiocho, qui a Macedonibus oriundi erant, haud multo post Carthaginem subactam devictis summa imperii ad populum Romanum pervenit. Inter hoc tempus, et initium Nini regis Assyriorum, qui princeps rerum potitus, intersunt anni MDCCCXCIV."

THE Asiatic empire was subsequently transferred from the Assyrians, who had held it 1070 years, to the Medes, from this time, for a period of 870 years. For Sardanapalus, the king of the Assyrians, a man wallowing in luxury, being the thirty-third from Ninus and Semiramis, the founders of Babylon, from whom the kingdom had passed in a regular descent from father to son, was deprived of his empire, and put to death by Arbaces the Mede. . . . Æmilius Sura also, in his annals of the Roman people, says, "That the Assyrian princes extended their empire over all nations. They were succeeded by the Medes, then by the Persians, then by the Macedonians and shortly afterwards by two kings Philip and Antiochus, of Macedonian origin, who, not long after the destruction of Carthage, were conquered by the Romans, who then obtained the empire of the world. To this time, from the beginning of the reign of Ninus, king of the Assyrians, who first obtained the empire, there has elapsed a period of 1995 years."

OF THE CHALDÆAN OBSERVATIONS:

FROM PLINIUS.

ANTICLIDES in Ægypto invenisse quendam nomine Menona tradit xv annis ante Phoroneum antiquissimum Græciæ regem: idque monumentis approbare conatur. E diverso Epigenes apud Babylonios dccxx annorum observationes siderum coctilibus laterculis inscriptas docet, gravis auctor in primis: qui minimum Berossus et Critodemus cccclxxx* annorum. Ex quo apparet† æternus literarum usus.

ANTICLIDES relates that they (letters) were invented in Egypt by a person whose name was Menon, fifteen years before Phoroneus the most ancient king of Greece: and he endeavours to prove it by the monuments. On the contrary, Epigenes, a writer of first-rate authority, informs us, that among the Babylonians were preserved observations of the stars, inscribed upon baked tiles, extending to a period of 720 years. Berossus and Critodemus, who are the most moderate in their calculations, nevertheless extend the period of the observations to 480* years. Whence may be inferred the eternal use of letters among them.—Lib. VII. c. 56.

FROM CICERO.

Contemnamus etiam Babylonios, et eos, qui e Caucasos cœli signa servantes, numeris et motibus stellarum cursus persequuntur: condemnemus, inquam, hos aut stultitiæ, aut vanitatis, aut impudentiæ, qui cccclxx millia annorum, ut ipsi dicunt, monumentis comprehensa continent.

We must also condemn the Babylonians, and those who, in the region of Caucasus, pretend to have observed the heavens and courses of the stars: we must condemn them, I say, of folly, or of vanity, or of impudence, who assert that they have preserved upon monuments observations extending back during an interval of 470,000 years.—*De Divin.*

The Editor in a note produces some passages from Moses Choronensis and others to shew that such was the general opinion among the Armenians.

DYNASTY OF ASSYRIAN KINGS.*

ASSYRIORUM primum regem scribunt Bilum, quem et ab Assyriis et Phoenices et Persi Deum vocaverunt. Hunc Dium Græco nomine interpretaverunt.

I. Bilus vero primus in Assyrios regnavit annos LXII, et partem Asiæ.

II. Post hæc regnavit Ninus annos LII. Iste condidit Ninevem civitatem Assyriorum, et veniens in Asia vocatus est Picus.

III. Post quem Semiramis, uxor ejus annos XLII. Hanc Ream vocaverunt propter ejus multam atrocitatem.

IV. Post hunc Zinas, regnavit annos XXXVIII.

V. Arius xxx.

THEY write that the first king of the Assyrians was Bilus, whom the Assyrians, Phoenicians, and Persians, call God. In the Greek language they call him Dium.

1. Bilus, who was the first king, reigned over the Assyrians and part of Asia 62 years.

2. Afterwards reigned Ninus 52 years. He founded Nineveh, a city of the Assyrians, and coming into Asia was called Picus.

3. After him Semiramis, his wife, 42 years. She was called Rea on account of her manifold atrocities.

4. After her Zinas reigned 38 years.

5. Arius reigned 30 years.

* This Catalogue is given by Scaliger from a Chronological compilation "ab homine barbaro, inepto, Hellenismi et Latinitatis imperitissimo." It is possibly a mutilated copy of Castor's Canon, as it ends with the second Ninus. See p. 65.

AMONG the Egyptians there is a certain tablet called the Old Chronicle, containing thirty dynasties in 113 descents, during the long period of 36525† years. The first series of princes was that of the Auritæ; the second was that of the Mestræans; the third of Egyptians. It runs as follows:

THE REIGN OF THE GODS

According to the Old Chronicle.

To Hephæstus is assigned no time as he is apparent both by night and day.

Helius the son of Hephæstus reigned three myriads of years.

Then Cronus and the other twelve divinities reigned 3984.

FROM CASTOR.

ÆGYPTIORUM regnum inveni-
mus vetustissimum omnium reg-
norum: cujus initium sub Ma-
nethono dicitur in memoramus
scribere.

Primum Deorum, qui ab ipsis
scribuntur faciam regna sic:

Of all kingdoms we find that
of the Egyptians to be the most
ancient. Of whose beginning
we purpose to write according
to the relation of Manetho.

The first dynasty was that of
the Gods, who are classed by
themselves; and I reckon their
reigns thus:

* ἡγευν Vulg.—ἦτοι Sc.

† κυραννήσι B.

Ifestum dicunt quidam Deum regnare in Ægypto annos sexcentos LXXX.

Post hunc Solem Ifesti annos LXXVII.

Post istum Osinosirim annos CCCXX.

Post hunc Oron Stoliarchum annos XXVIII.

Post hunc Typhona annos XLV.

Colliguntur Deorum regna anni mille DL.

Deinceps Mitheorum regna sic :

Prota Anubes Amusim, qui etiam Ægyptiorum scripturas composuit annos LXXXIII.

Post hunc Apion Grammaticus, qui secundum Inachum interpretabatur annos LXXVII quem sub Argios initio regnaverunt.*

Post hæc Ecyniorum† reges interpretavit Imitheus vocans et ipsos, annos duo millia c, fortissimos vocans.

Hæc finis de primo Tomo

Some say the God Ifestus reigned in Egypt 680 years.

After him the Sun, the son of Ifestus, 77 years.

After him Osinosiris, 420 years.

After him Oros Stoliarchus, 28 years.

After him Typhon, 45 years.

The sum of the reigns of the Gods amounts to 1550 years.

Then succeeds the kingdom of the Demi-gods, thus :

First reigned Anubes Amusim, who composed the writings of the Egyptians, 83 years.

After him Apion Grammaticus, who reigned 77 years. In his reign commenced the kingdom of Argos, under Inachus.*

Afterwards the kings of the Ecynii,† by whom must be understood the Demi-gods. They reigned 2100 years.

This is the end of the first

* This and the next passage are so barbarous and obscure that the translation I have given is merely conjectural. I suspect this passage has some connexion with the following from Tatianus. Ἀπίων δὲ γραμματικός φησι δὲ ὅτι κατὰ τὴν Αὔρα Ἀμυσις κατὰ τὸν Ἀργεῖον γενόμενος Ἰναχον.—Eus. Pr. X.

† These Ecynii are manifestly the same with νέκυας of the Dynasties of Manetho and the Manes of the preceding, all which appear to be no other than a corruption of the fifteen generations of the Cynic Cycle ἐν κυνικῷ in the original of the old Chronicle, p. 90.

Manethoni habens tempora annorum duo millia c.

volume of Manetho, which contains a period of 2100 years.

Mineus and seven of his descendants reigned 253 years.

Then reigned eight others 302 years.

Nechocheus, and eight others, reigned 214 years.

Likewise seventeen others, 214 years.

Likewise twenty-one others, 258 years.

Othoi and seven others, 203 years.

Likewise fourteen others, 140 years.

Likewise twenty others, 409 years.

Likewise seven others, 204 years.

Dynasty of Diospolites 9 years.

Dynasty of Bubastites 153 years.

Dynasty of Tanites 184 years.

rates to the 17th dynasty and contains a period of 1520 years.

These are the Dynasties of Egypt.

FROM EUSEBIUS.

PRIMUS homo apud Ægyptios Hephestus qui ignis inventor ipsis fuit.

A quo Sol.

(Post quem Agathodæmon.

Post)* quem Cronus.

Post hunc Osiris.

Ac deinde Typhon frater Osiridis.

Post quem Orus Osiridis et Isidis filius.

Ægyptii primi hi dominati sunt.

Post quos per successionem protractum est regnum usque ad Bitem, in spatio annorum myriadis triumque millium et nonagentorum, juxta annos lunares, triginta inquam dierum numerum enim mensem unum, illi annum vocabant.

THE first man according to the Egyptians was Hephestus, who was the inventor of fire.

From him descended the Sun.

(After whom Agathodæmon.

After) whom Cronus.

Then Osiris.

And then Typhon, the brother of Osiris.

After whom was Orus, the son of Osiris and Isis.

These were the first Egyptian kings.

After them the empire descended by a long succession to Bites, through a lapse of 13,900 years, reckoned, I say, in lunar years of thirty days to each: for even now they call the month a year.

* This passage in the Armenian is between parentheses, and in what we might call italics. Has it been interpolated or omitted? I have replaced the true names from the Armenian: Aucher has given them Vulcanus, Saturnus, &c.

Post Deos regnavit gens
Semi-deorum annis MCCLV.

Atque item alii reges domi-
nati sunt annis MDCCCXVII.

Post quos alii xxx reges
Memphites annis MDCCXC.

Post eos alii Thynites x reges
annis CCCL.

Ac deinde Manium et Semi-
deorum regnum annis MMMMM
DCCCXIII.

Simul omnes anni recensentur,
myrias (et) mille: qui
etiam lunares sunt, scilicet
menstrui.

Computantur simul omnes
anni lunares quos Ægyptii re-
ferunt fuisse Deorum et Semi-
deorum atque Manium, duæ
myriades, quatuor millia et
DCCCC.

After the Gods, a race of
Demi-gods reigned 1255 years.

Then reigned other kings
1817 years.

After them thirty Memphite
kings, 1790.

Then ten Thynite kings, 350
years.

Then came the kingdom of
the Manes and Demi-gods,
5813.

The number of years alto-
gether amounts to 11,000;
which also are lunar years, that
is to say, months.

All the lunar years, which
the Egyptians allow to the
reigns of the Gods, the Demi-
gods, and the Manes, are
24,900.—*Eu. An.* 200.

Tethmosis was king when the shep-
herds went out of Egypt. From these
(the shepherd) kings there intervenes
a period of 393† years to the two bro-

Jos. contr. Ap. I. 15.

* Qy. Σέθωσις δ' καὶ Ραμέσσης, who is Ramesses.

† The sum of the 17 kings of the 18th dynasty amounts only to 333 years. The reading 393 is however confirmed by the extracts in the following page. I am indebted to Mr. Cullimore for the observation that the deficiency of 60 years occurs in the 7th and 11th reigns which ought to have been each 39 years. This correction, which may be found in some of the other lists, makes the Canon completely harmonize with the Hieroglyphic dates.

τριακόσια ἐνενηκοντατρία ἔτη, μέχρι τῶν δύο ἀδελφῶν Σέθω καὶ Ἑρμαίου, ὧν τὸν μὲν Σέθων Αἴγυπτον τὸν δὲ Ἑρμαῖον Δά- ναον μετονομασθῆναί φησιν. Ὁν ἐκβαλὼν ὁ Σέθως ἐβασί- λευσεν ἔτη νθ'. Καὶ μετ' αὐ- τὸν ὁ πρεσβύτερος τῶν υἱῶν αὐτοῦ Ράμφης ξς'.

In the 16th chapter Josephus has the following—

Δῆλον δὲ ἐστὶν ἐκ τῶν εἰρη- μένων ἐτῶν τοῦ χρόνου συλλο- γισθέντος ὅτι οἱ καλούμενοι ποιμένες, ἡμέτεροι δὲ πρόγονοι, τρισὶ καὶ ἐνεήκοντα καὶ τρια- κοσίοις πρόσθεν ἔτεσιν, ἐκ τῆς Αἰγύπτου ἀπαλλαγέντες, τὴν χώραν ταύτην ἀπέκησαν, ἣ Δαναὸν εἰς Ἄργος ἀφίκεσθαι.

And in the 2d chapter of the second book:—

Μανεθὼς μὲν γὰρ κατὰ τὴν Τεθμώσιος βασιλείαν ἀπαλλα- γῆναί φησιν ἐξ Αἰγύπτου τοὺς Ἰουδαίους, πρὸ ἐτῶν τριακο- σίων ἐνενηκοντατριῶν τῆς εἰς Ἄργος Δαναοῦ φυγῆς. Λυσί- μαχος δὲ κατὰ Βόκχωριν τὸν βασιλέα, τουτέστι πρὸ ἐτῶν χιλίων ἑπτακοσίων. Μόλων δὲ καὶ ἄλλοι τινὲς ὡς αὐτοῖς ἔδοξεν. Ὁ δὲ γε πάντων πιστό- τατος Ἀπίων ὥρισατο τὴν ἔξο- δον ἀκριβῶς κατὰ τὴν ἐβδόμην Ὀλυμπιάδα, καὶ ταύτης ἔτος εἶναι πρῶτον, ἐν ᾧ φησι Καρ- χηδόνα Φοίνικες ἐκτίσαν.

thers Sethos and Hermæus of whom he says Sethos was called Aegyptus, and Hermæus Danaus. Sethos after he had expelled Hermæus reigned 59 years. After him his eldest son Ramp- ses reigned 66 years.—*Jos. contr. Ap. I. 26.*

It is manifest from a computation of the above-mentioned years, that the Shepherds (our ancestors) were driven out from Egypt, and left that country three hundred and ninety- three years previous to the departure of Danaus to Argos.

Manetho says that the Jews (i. e. the Shepherds) left Egypt in the reign of Tethmosis three hundred and ninety-three years before the flight of Danaus to Argos. Lysi- machus that it was in the reign of Bocchoris, i. e. one thousand seven hundred years before. Molo and some others place it as seems good to them. But Apion the most cor- rect (*ironically*) of all, fixes it de- cidedly at the first year of the seventh Olympiad in which he says the Phœ- nicians founded Carthage.

‡ In the Armenian Canon of Eusebius, a Theban dynasty, which he calls the 16th, is placed as the first, to which is assigned a period of 190 years. This is followed by the 17th dynasty of the Shepherds which lasts 103 years. No names are given in either. The first part of Hieronymus' old Latin version of Eusebius is lost. The lists therefore both of the Armenian Canon and of Hieronymus' version commence with this the 18th dynasty of Diospolites. The names of the 32 kings given above, are merely those of Syncellus in the Greek opposite.

SOME of them fable that the Gods
and Heroes first reigned in Egypt
during a period little less than eighteen
thousand years ; and that the last of
the gods who reigned was Horus
the son of Isis. They also relate
that the kingdom was governed by
men during a series of nearly fifteen
thousand years to the hundred and
eightieth Olympiad in which we have
visited Egypt which was during the
reign of Ptolemy who bears the title
of the younger Dionysus.

The kings of Egypt were for the
most part natives of the country, but
the Ethiopians, Persians and Mace-
donians acquired the empire for some
short periods.

There reigned altogether four

Βούσιρις.

Ethiopians, not successively but at intervals, the length of whose reigns collectively occupied a period of nearly thirty-six years.

The Persians, under the command of Cambyses their king, subdued the nation by force of arms. They occupied the throne during a hundred and thirty-five years, inclusive of the insurrections, which the Egyptians, unable to put up with the severity of their domination, and their impiety towards the gods of the country, made from time to time.

Lastly reigned the Macedonians, and their successors, two hundred and seventy-six years.

All the rest of the time was filled up with native princes, that is to say, four hundred and seventy kings and five queens.

After the gods, Menas was the first king of the Egyptians.

After him it is said that two of the descendants of the before-mentioned king reigned, and they were succeeded by fifty who altogether reigned during a period of more than one thousand four hundred years.

the islands of the Cyclades. He

CANON OF THE KINGS OF EGYPT:

FROM HERODOTUS.

ΤΟΝ Μῆνα, τὸν πρῶτον βα-
σιλεύσαντα Αἰγύπτου.

MENES was the first king of Egypt.

Νίτωκρῖς.

After him, the priests read out of
a book the names of 330 kings. And
among these were 18 Ethiopians and
one woman a native Egyptian: all the
rest were men and Egyptians: and
the name of the woman, who reigned
also over the country of Babylonia,
was Nitocris.

cept the last Mæris. He dug the
lake.

Sesostris. The priests said that
he first sailed with a fleet of large
vessels from the Arabian gulph, and
conquered all the nations bordering
upon the Red Sea. And that from
thence he returned to Egypt, and
with a mighty army he traversed
the continent (of Asia) subjugating
every nation that opposed him. From
Asia he passed over into Europe and
reduced the Scythians and Thracians.

Pheron, the son of Sesostris.

A Memphite, whose name, accord-
ing to the Greek interpretation, was
Proteus.

Rampsinitus.

After him reigned Cheops, who
inflicted upon them every kind of
evil: he overthrew the temples, and
was the first who put a stop to the
sacrifices. He founded the pyramid,
and reigned 50 years.

Chephren, the brother of Cheops.
He built a pyramid, and reigned 56
years. The Egyptians, out of hatred,
decline to name these two kings, but

Mycerinus, the son of Cheops.
He also left a pyramid much less
than that of his father.

Asychis.

Anysis, who was blind. In his
reign the Ethiopians invaded Egypt
with a mighty army under Sabacos
their king.

Sabacos, the Ethiopian, reigned
50 years.

Anysis the blind, again.

Sethos, the priest of Hephaestus.
In his reign Sanacharibus, the king of
the Arabians and Assyrians, marched
against Egypt with a vast army.
And when Sethos and his attendants
arrived at Pelusium, during the night
a multitude of rats attacked their ene-
mies, and gnawed the bowstrings from
off their bows, and the thongs of their
spears; so that on the morrow, as
they fled unarmed, great numbers of
them were slain. From the first
king to Sethos the priest of He-
phaestus, are 341 generations of men.

Twelve kings reigned over Egypt,
 divided into twelve parts.

Psammetichus, one of the twelve,
 reigned 54 years. And in the 29th
 year of his reign he beleagued Azo-
 tus (Ashdod?) a large city of Syria,
 and took it by siege.

Necos, the son of Psammetichus,
 reigned 11 years. He was the first who
 undertook to cut the canal through to
 the Red Sea. He also marched against
 the Syrians and overcame them in an
 engagement at Magdolus (Migdol?)

OF THE EARLY KINGS OF EGYPT AND THE EGYPTIAN ERA.

FROM JOSEPHUS.

ALL the kings of the Egyptians, from Minæus, the founder of Memphis, who lived many years before Abraham our ancestor, to Solomon, extending through an interval of more than 1300 years, bore the title of Pharaohs.—*Jos. Ant.* lib. VII. c. 6.

FROM MALALA.

ΑΙΓΥΠΤΙΩΝ δὲ ἐβασίλευσε πρῶτος βασιλεὺς τῆς φυλῆς τοῦ Χάμ, υἱοῦ Νῶε, Φαραὼ, ὁ καὶ Ναραχὼ καλούμενος.

THE first king of the Egyptians was Pharao, of the tribe of Ham, the son of Noe. he is called also Naracho.—*J. Malala*, lib. III.

HEPHÆSTUS, a God: also Fire. After the death of Hermes, king of Egypt, Hephæstus obtained possession of the empire 1680 days, which is 4 years, 7 months, and 8 days; for the Egyptians in those times were not in the habit of measuring time by the year, but called the period of the day a year.—*Suidas v Hephæstus.*

FROM DIOGENES LAERTIUS.

ὀκτακοσίας τριακονταδύο.

THE Egyptians say that Hephæstus was the son of Nilus, and that he invented philosophy, of which the followers were called Priests and Prophets. From him to the time of Alexander the Macedonian elapsed 48863 years, in which occurred 373 solar eclipses and 832 lunar eclipses.—*Diog. Laert. Proæm. p. 2.*

Ἄλλοι δὲ ταῦτα εἰς Ὡρον ἀναφέρουσι.

DICÆARCHUS, in his first book, says, that after Orus, the son of Osiris and Isis, reigned Sesostris: and that from the reign of Sesostris to that of Nilus elapsed a period of 2500 years;† and from the reign of Nilus to the first Olympiad 436 years;‡ so that altogether the number of years amounted to 2936. Dicæarchus, moreover, says, that he established laws that no one should leave the profession of his fathers: for he believed that such a proceeding would be the introduction of avarice. He was the first who discovered the art of riding upon horseback. Others, however, attribute these things to Orus.—*Schol. in Apoll. Rhod. Arg. Lib. IV. v. 272.*

Jews. And he compelled them first
to build Kessa and to construct the

THE Egyptians, according to their own accounts, are the most ancient of men, and they reckon in their series of annals 330 kings who reigned above 13,000 years; and they preserve, in written records, the memory of the event, that, since the commencement of the Egyptian race, the stars have completed four revolutions, and the sun has twice set where he now rises.

THERE is a very ancient God among the Egyptians who is called Heracles: and they assert, that from his reign to that of Amasis, 17,000 years have elapsed: they reckoned Heracles among the Gods when the number was augmented from 8 to 12.—Lib. II. c. 43.

BUT the priests of Egypt, summing
up the time from the reign of the
Sun to the descent of Alexander upon
Asia, calculate it to be about 23,000
years. They pretend, also, in their
fabulous legends, that the most an-
cient of the Gods reigned more than
1200 years; and those that came im-
mediately after them in succession not
less than 300. Some of them attempt
to abate the incredibility of such a
multitude of years, by asserting, that
in former times, when the revolution
of the sun was not accurately ascer-
tained, the year consisted of one re-
volution of the moon.—Lib. I. p. 15.

It remains, therefore, to make certain extracts concerning the dynasties of the Egyptians, from the writings of Manetho the Sebennyte, the high-priest of the idolatrous temples of Egypt in the time of Ptolemæus Philadelphus. These, according to his own account, he copied from the inscriptions which were engraved in the sacred dialect and hierographic characters, upon the columns set up in the Seriadie land, by Thoth, the first Hermes; and, after the deluge, translated from the sacred dialect into the Greek tongue, in hieroglyphic characters; and committed to writing in books, and deposited by Agathodæmon, the son of the second Hermes, the father of Tat, in the pene-tralia of the temples of Egypt. He has addressed and explained them to Philadelphus, the second king that bore the name of Ptolemæus, in the

WE had formerly a king whose name was Timaus. In his time it came to pass, I know not how, that God was displeased with us: and there came up from the East in a strange manner men of an ignoble race, who had the confidence to invade our country, and easily subdued it by their power without a battle. And when they had our rulers in their hands, they burnt our cities, and demolished the temples of the gods, and inflicted every kind of barbarity upon the inhabitants, slaying some, and reducing the wives and children of others to a state of slavery. At length they made one of themselves king, whose name was Salatis: he lived at Memphis, and rendered both the upper and lower regions of Egypt tributary, and stationed garrisons in

 These six were the first rulers
 amongst them, and during the whole
 period of their dynasty, they made
 war upon the Egyptians with the
 hope of exterminating the whole race.
 All this nation was styled Hycsos,
 that is the Shepherd Kings; for the
 first syllable, Hyc, in the sacred dia-
 lect, denotes a king, and Sos signifies
 a shepherd, but this only according
 to the vulgar tongue; and of these
 is compounded the term Hycsos:
 some say they were Arabians. This
 people who were thus denominated
 Shepherd Kings, and their descend-
 ants retained possession of Egypt
 during the period of five hundred and
 eleven years.

After these things he relates that
 the kings of Thebaïs and of the other
 provinces of Egypt, made an insur-
 rection against the Shepherds, and
 that a long and mighty war was car-
 ried on between them, till the Shep-
 herds were overcome by a king whose

them all, some by force of arms, and others without a battle, by the mere terror of his power. And being elated with his success, he advanced still more confidently, and overthrew the cities, and subdued the countries of the East.

But Armaïs, who was left in Egypt, took advantage of the opportunity, and fearlessly perpetrated all those acts which his brother had enjoined him not to commit: he violated the queen, and continued an unrestrained intercourse with the royal concubines; and at the persuasion of his friends he assumed the diadem, and openly opposed his brother.

But the ruler over the priests of Egypt by letters sent an account to Sethosis, and informed him of what had happened, and how his brother had set himself up in opposition to his power. Upon this Sethosis immediately returned to Pelusium, and recovered his kingdom. The country of Egypt took its name from Sethosis, who was called also Ægyptus, as was his brother Armaïs known by the name of Danaus.—*Joseph. contr. App. lib. I. c. 14, 15.*

This king (Amenophis) was de-
sirous of beholding the gods, as Orus,
one of his predecessors in the king-
dom, had seen them. And he com-
municated his desire to a priest of the
same name with himself, Amenophis,
the son of Papis, who seemed to
partake of the divine nature, both in
his wisdom and knowledge of futu-
rity: and Amenophis returned him
answer, that it was in his power to
behold the gods, if he would cleanse
the whole country of the lepers and
other unclean persons that abounded
in it.

Well pleased with this information,
the king gathered together out of
Egypt all that laboured under any
defect in body, to the amount of
eighty thousand, and sent them to the
quarries, which are situated on the
east side of the Nile, that they might
work in them and be separated from
the rest of the Egyptians. And (he
says) there were among them some
learned priests who were affected
with leprosy. And Amenophis the
wise man and prophet, fearful lest
the vengeance of the gods should fall
both on himself and on the king, if

it should appear that violence had been offered them, added this also in a prophetic spirit;—that certain people would come to the assistance of these unclean persons, and would subdue Egypt, and hold it in possession for thirteen years. These tidings however he dared not to communicate to the king, but left in writing an account of what should come to pass, and destroyed himself, at which the king was fearfully distressed.

(After which he writes thus, word for word :) When those that were sent to work in the quarries had continued for some time in that miserable state, the king was petitioned to set apart for their habitation and protection the city Avaris, which had been left vacant by the Shepherds; and he granted them their desire: now this city, according to the theology above, is a Typhonian city.

But when they had taken possession of the city, and found it well adapted for a revolt, they appointed for themselves a ruler from among the priests of Heliopolis, one whose name was Osarsiph, and they bound themselves by oath that they would be obedient. Osarsiph then, in the first place enacted this law, that they should neither worship the gods, nor

Now Amenophis the king of Egypt, when he was informed of their invasion, was in great consternation, remembering the prophecy of Amenophis, the son of Papis. And he assembled the armies of the Egyptians, and having consulted with the leaders, he commanded the sacred animals to be brought to him, especially those which were held in more particular veneration in the temples, and he forthwith charged the priests to conceal the images of their gods with the utmost care. Moreover he placed his son Sethos, who was also called Ramesses from his father Rampses, being then but five years old, under the protection of a faithful adherent; and marched with the rest of the Egyptians being three hundred thousand warriors, against the enemy, who advanced to meet him: but he did not attack them, thinking it would be to wage war against the gods, but returned, and came again to Memphis, where he took Apis and the other sacred animals he had sent for, and retreated immediately into Ethiopia together with all his army, and all the multitude of the Egyptians;

He was therefore kindly received by the king, who took care of all the multitude that was with him, while the country supplied what was necessary for their subsistence. He also allotted to him cities and villages during his exile, which was to continue from its beginning during the predestined thirteen years. Moreover he pitched a camp for an Ethiopian army upon the borders of Egypt, as a protection to king Amenophis.

In the mean time, while such was the state of things in Ethiopia, the people of Jerusalem, who had come down with the unclean of the Egyptians, treated the inhabitants with such barbarity, that those who witnessed their impieties believed that that their joint sway was more execrable than that which the Shepherds had formerly exercised alone. AFTER him (Manetho) I wish to

the sacred scribe told him, that if he
would clear Egypt of all polluted
persons he would be delivered from

Moyses and Josephus, the latter of

Egyptian names were, that of Moyses
Tisithen, and that of Josephus Pete-

Pelusium where they met with three

there by Amenophis, whom he would
not suffer to come into Egypt.

With these they made a treaty and
invaded Egypt. But Amenophis
waited not to oppose their incursion,
but fled into Ethiopia, leaving his
wife pregnant: and she concealed
herself in a cavern where she brought

concourse of foreigners of every nation then dwelt in Egypt, who were addicted to strange rites in their worship and sacrifices; so that in consequence the due honours of the gods fell into disuse. Whence the native inhabitants of the land inferred, that, unless they removed them, there would never be an end of their distresses. They immediately therefore expelled these foreigners; the most illustrious and able of whom passed over in a body (as some say) into Greece and other places under the conduct of celebrated leaders, of whom the most renowned were Danaus and Cadmus.

But a large body of the people went forth into the country which is now called Judæa, situated not far distant from Egypt, being altogether desert in those times. The leader of this colony was Moses, a man very remarkable for his great wisdom and valour. When he had taken possession of the land, among other cities, he founded that which is called Jerusalem which is now the most celebrated.—*Lib. xl. Ecl. i. p. 921.*

N.B. The rest of the fragment gives an account of the Jewish polity, laws, &c. It was the beginning of Diodorus' history of the Jewish war, and is preserved by Photius.

He says, That in the reign of Bocchoris king of Egypt, the Jewish people being infected with leprosy, scurvy, and sundry other diseases, took shelter in the temples where they begged for food; and that in consequence of the vast number of persons who were seized with the complaint there became a scarcity in Egypt. Upon this Bocchoris the king of the Egyptians sent persons to inquire of the Oracle of Ammon, respecting the sterility: and the god directed him to cleanse the temples of all polluted and impious men and cast them out into the desert, but to drown those that were affected with the leprosy and scurvy, inasmuch as their existence was displeasing to the Sun; then to purify the temples; upon which the land would recover its fertility. When Bocchoris had received the oracle, he assembled the priests and attendants of the altars, and commanded them to gather together all the unclean persons and deliver them over to the soldiers to lead them forth into

And the Memphites say that

* Artabanus, evidently an Alexandrian Jew, is said to have written about a century B. C. The fragments of his history which have been preserved follow the Scripture with some few variations and additions. I have inserted the above fragment on account of the Memphite and Heliopolitan traditions of the Exodus referred to in it. Its authenticity, however, is very much to be suspected.

ἔμπειρον ὄντα τὸν Μώυσον τῆς χώρας, τὴν ἄμπωτιν τηρήσαντα, διὰ ξηρᾶς τῆς θαλάσσης τὸ πλῆθος παραιῶσαι.

Moyses being well acquainted with that part of the country waited for the ebbing of the tide, and then made the whole multitude pass through the shallows of the sea.

But the Heliopolitans say that the king pursued them with great power, and took with him the sacred animals, in order to recover the substance which the Jews had borrowed of the Egyptians. But that a divine voice instructed Moyses to strike the sea with his rod: and that when Moyses heard this he touched the waters with the rod, whereupon the waves stood apart, and the host went through along a dry path. He * says moreover that when the Egyptians came up with them and followed after them, the fire flashed on them from before, and the sea again inundated the path, and that all the Egyptians perished either by the fire or by the return of the waters.

But the Jews escaped the danger and passed thirty years in the desert, where God rained upon them a kind of grain like that called Panic, whose color was like snow. He says also that Moyses was ruddy with white

He raised the eastern parts of the city, and enlarged the citadel; and joined to it the temple of Jupiter Olympius, which stood before upon an island, by filling up the intermediate space: and he adorned that temple with donations of gold: and he went up into Libanus to cut timber for the construction of the temples. And it is said that Solomon, who at that time reigned in Jerusalem, sent enigmas to Hiromus, and desired others in return, with a proposal that whichever of the two was unable to solve them, should forfeit money to the other. THE VOYAGE

OF HANNO, COMMANDER OF THE
CARTHAGINIANS,

ROUND the parts of Libya which lie
beyond the Pillars of Hercules,
which he deposited in the temple of
Saturn.

It was decreed by the Carthagi-
nians that Hanno should undertake
a voyage beyond the Pillars of Her-
cules, and found Libyphoenician
cities. He sailed accordingly with
sixty ships of fifty oars each, and a
body of men and women to the num-
ber of thirty thousand, and provi-
sions and other necessities.

When we had passed the Pillars
on our voyage, and had sailed beyond
them for two days, we founded the
first city, which we named Thymia-

Proceeding thence towards the west, we came to Solœis, a promontory of Libya, a place thickly covered with trees, where we erected a temple to Neptune; and again proceeded for the space of half a day towards the east, until we arrived at a lake lying not far from the sea, and filled with abundance of large reeds. Here elephants, and a great number of other wild beasts, were feeding.

Having passed the lake about a day's sail, we founded cities near the sea, called Cariconticos, and Gytte, and Acra, and Melitta, and Arambys. Thence we came to the great river Lixus, which flows from Libya. On its banks the Lixitæ, a shepherd tribe, were feeding flocks, amongst whom we continued some time on friendly terms. Beyond the Lixitæ dwelt the inhospitable Ethiopians, who pasture a wild country intersected by large mountains, from which they say the river Lixus flows. In the neighbourhood of the mountains lived the Troglodytæ, men of various appearances, whom the Lixitæ de-

Having procured interpreters from
them we coasted along a desert coun-
try towards the south two days.
Thence we proceeded towards the
east the course of a day. Here we
found in a recess of a certain bay a
small island, containing a circle of five
stadia, where we settled a colony, and
called it Cerne. We judged from our
voyage that this place lay in a direct
line with Carthage; for the length of
our voyage from Carthage to the
Pillars, was equal to that from the
Pillars to Cerne.

We then came to a lake which we
reached by sailing up a large river
called Chretes. This lake had three
islands, larger than Cerne; from
which proceeding a day's sail, we
came to the extremity of the lake,
that was overhung by large moun-
tains, inhabited by savage men,
clothed in skins of wild beasts, who
drove us away by throwing stones,
and hindered us from landing. Sailing
thence we came to another river, that
was large and broad, and full of cro-
codiles, and river horses; whence

returning back we came again to
Cerne.

Thence we sailed towards the
south twelve days, coasting the shore,
the whole of which is inhabited by
Ethiopians, who would not wait our
approach but fled from us. Their
language was not intelligible even to
the Lixitæ, who were with us. To-
wards the last day we approached
some large mountains covered with
trees, the wood of which was sweet-
scented and variegated. Having
sailed by these mountains for two
days we came to an immense opening
of the sea; on each side of which
towards the continent, was a plain;
from which we saw by night fire
arising at intervals in all directions,
either more or less.

Having taken in water there, we
sailed forwards five days near the
land, until we came to a large bay
which our interpreters informed us
was called the Western Horn. In
this was a large island, and in the
island a salt-water lake, and in this
another island, where, when we had
landed, we could discover nothing in
the day-time except trees; but in the
night we saw many fires burning, and
heard the sound of pipes, cymbals,
drums, and confused shouts. We

were then afraid, and our diviners or-
dered us to abandon the island. Sail-
ing quickly away thence, we passed
a country burning with fires and per-
fumes; and streams of fire supplied
from it fell into the sea. The coun-
try* was impassable on account of the
heat. We sailed quickly thence, being
much terrified; and passing on for
four days, we discovered at night a
country full of fire. In the middle
was a lofty fire, larger than the rest,
which seemed to touch the stars.
When day came we discovered it to
be a large hill called the Chariot of
the Gods. On the third day after our
departure thence, having sailed by
those streams of fire we arrived at a
bay called the Southern Horn; at the
bottom of which lay an island like
the former, having a lake, and in this
lake another island, full of savage
people, the greater part of whom
were women, whose bodies were
hairy, and whom our interpreters
called Gorillæ. Though we pursued
the men we could not seize any of
them; but all fled from us, escaping
over the precipices, and defending
themselves with stones. Three women
were however taken; but they at-
tacked their conductors with their
teeth and hands, and could not be
prevailed upon to accompany us.
Having killed them, we flayed them,

HIEMPSAL:

FROM SALLUST.

OF THE AFRICAN SETTLEMENTS.

SED qui mortales initio Africam habuerint, quique postea accesserint, aut quo modo inter se permixti sint, quamquam ab ea fama, quae plerisque obtinet, diversum est; tamen, ut ex libris Punicis, qui regis Hiempsalis dicebantur, interpretatum nobis est: utique rem sese habere, cultores ejus terrae putant, quam paucissimis dicam. Ceterum fides ejus rei penes auctores erit.

Africam initio habuere Gætuli, et Libyes, asperi, incultique, quibus cibus erat caro et ferina, atque humi pabulum, uti pecoribus.

BUT what race of men first had possession of Africa, and who afterwards arrived, and in what manner they have become blended with each other; though the following differs from the report which is commonly current, yet I will give it as it was interpreted to me from the Punic books, which are called the books of King Hiempsal, and will explain in as few words as possible the opinion of the inhabitants of the land itself relative to the matter in question. But its authenticity must rest upon the credit of its authors.

The aboriginal possessors of Africa were the Gætulians and Libyans, a rough unpolished race, whose food was flesh and venison, and the pasturage of the ground like cattle. They

Hi neque moribus, neque lege, aut imperio cujusquam regebantur; vagi, palantes, quas nox coëgerat, sedes habebant.

Sed postquam in Hispaniâ Hercules, sicut Afri putant, interiit, exercitus ejus compositus ex gentibus variis, amisso duce, ac passim multis sibi quisque imperium petentibus, brevî dilabatur. Ex eo numero Medi, Persæ, et Armenii, navibus in Africam transvecti, proximos nostro mari locos occupavêre. Sed Persæ intrâ Oceanum magis: hique alveos navium inversos pro tuguriis habuêre: quia neque materia in agris, neque ab Hispanis emundi, aut mutandi copia erat. Mare magnum, et ignara lingua commercia prohibebant. Hi paulatim, per connubia, Gætulos secum miscuêre; et quia sæpè tentantes agros, alia, deinde alia loca petiverant, semet ipsi Numidas appellavêre. Cæterùm adhuc ædificia Numidarum agrestium,

were neither restrained by morals, nor law, nor any man's government; wanderers and houseless, taking up their abode wherever they might chance to be, when night came upon them.

But when Hercules perished in Spain, according to the opinion of the Africans, his army, composed of various nations, upon the loss of its leader, and from the factious attempts of many to assume the command was quickly dispersed. From its ranks the Medes, Persians, and Armenians, having passed over by shipping into Africa, occupied the parts bordering upon our sea. The Persians settled towards the Atlantic Ocean; and formed cottages of the inverted hulls of their vessels; for they could neither obtain the requisite materials in the fields, nor had the means of buying them or trafficking for them with the Spaniards: inasmuch as the magnitude of the sea, and ignorance of each others language, prevented all intercourse between them. Within a short time, by marriages, they blended themselves with the Gætulians, and because they frequently changed their situations, and passed from one place to another, they assumed the name of Numidians. And to this day the buildings of the wild Numidians, which they call Mapalia, are of an oblong form, with roofs in-

quæ mapalia illi vocant, oblonga, incurvis lateribus tecta, quasi navium carinæ sunt.

Medis autem, et Armeniis accessere Libyes. Nam. hi propius mare Africum agitabant: (Gætuli sub sole magis, haud procul ab ardoribus:) hique maturè oppida habuere. Nam, freto divisi ab Hispaniâ, mutare res inter se instituerant. Nomen eorum paulatim Libyes corrupere, barbarâ linguâ Mauros pro Medis appellantes. Sed res Persarum brevè adolevit; ac postea Numidæ nomine, propter multitudinem, à parentibus digressi, possidere ea loca, quæ proxima Carthaginem Numidia appellatur. Deinde, utrique alteris freti, finitimos armis, aut metu sub imperium suum coegere; nomen gloriamque sibi addidere: magis hi, qui ad nostrum mare processerant, quia Libyes, quàm Gætuli, minus bellicosi: denique Africæ pars inferior pleraque ab Numi-

curvated in the sides like the holds of ships.

The country occupied by the Medes and Armenians bordered upon that of the Libyans, for they occupied the parts nearer to the African sea, whilst the Gætulians were more towards the sun, not far from the torrid zone: and they quickly built cities; for, separated from Spain only by the straits, they established a mutual commerce. Their name was presently corrupted by the Libyans, who in their barbarous language called them Mauri (Moors) instead of Medes. The affairs of the Persians in a short time became prosperous, and a colony under the name of Numidians left their original settlements on account of their numbers, and took possession of that part of the country which is next to Carthage and now called Numidia. Moreover, by mutual assistance, they subjected their neighbours to their dominion either by the force or terror of their arms, acquiring great renown and glory; those more particularly which border upon our seas, inasmuch as the Libyans are less warlike than the Gætulians, till at length chief of the lower part of Africa was possessed by the Numidians, and all the con-

The Phœnicians afterwards sent

MEGASTHENES.

OF THE INVASIONS OF INDIA.

ΣΥΝΑΠΟΦΑΙΝΕΤΑΙ δέ πως καὶ Μεγασθένης τῷ λογῷ τούτῳ, κελύων ἀπιστεῖν ταῖς ἀρχαίαις περὶ Ἰνδῶν ἱστορίαις.

Οὔτε γὰρ παρ' Ἰνδῶν ἔξω σταλῆναί ποτε στρατιάν, οὔτ' ἐπελθεῖν ἔξωθεν καὶ κρατῆσαι, πλὴν τῆς μεθ' Ἡρακλέους καὶ Διονύσου, καὶ τῆς νῦν μετὰ Μακεδόνων. Καὶ τοι Σέσωστριν μὲν τὸν Αἰγύπτιον καὶ Τεάρκωνα τὸν Αἰθίοπα ἕως Εὐρώπης προελθεῖν. Ναυοκοδόρορον δὲ τὸν παρὰ Χαλδαίοις εὐδοκιμήσαντα Ἡρακλέους μᾶλλον, καὶ ἕως Στηλῶν ἐλάσαι· μέχρι μὲν δὴ δεῦρο καὶ Τεάρκωνα ἀφικέσθαι· ἐκεῖνον δὲ καὶ ἐκ τῆς Ἰβηρίας εἰς τὴν Θράκην, καὶ τὸν Πόντον ἀγαγεῖν τὴν στρατιάν. MEGASTHENES also appears to be of this opinion, informing us that no reliance can be placed upon the ancient histories of the Indians.

For, says he, there never was an army sent forth by the Indians, nor did ever a foreign army invade and conquer that country except the expeditions of Hercules and Dionysus, and this of the Macedonians. Yet Sesostris the Egyptian, and Tearcon the Ethiopian, extended their conquests as far as Europe. But Navocodrosorus, the most renowned among the Chaldæans, exceeded Hercules, and carried his arms as far as the Pillars: to which also it is said Tearcon arrived. But Navocodrosorus led his army from Spain to Thrace and Pontus. Idanthursus, the Scythian, also, overran all Asia as far as Egypt. But none of all these ever invaded India. Semiramis died before she commenced

the undertaking. But the Persians sent the Hydracæ to collect a tribute from India: but they never entered the country in a hostile manner, but only approached it, when Cyrus led his expedition against the Massagetæ. Megasthenes, however, with some few others, gives credit to the narratives of the exploits of Hercules and Dionysus: but all other historians, among whom may be reckoned Eratosthenes, set them down as incredible and fabulous, and of the same stamp with the achievements of the heroes among the Greeks.—*Strabo*, lib. xv. 686.

OF THE CASTES OF INDIA.*

Megasthenes says—That the whole population of India is divided into seven castes: among which that of the Philosophers is held in estimation as the first, notwithstanding their number is the smallest. The people when they sacrifice and prepare the feasts of the dead in private, each makes use of the services of one of them: but the kings publicly gather them together in an assembly which is called the great synod: at which in the commencement of each new year

gate (court) of the king; that what-
ever each of them may have collected
which may be of service, or may have
observed relative to the increase of
the fruits and animals and of the
state, he may produce it in public.
And it is a law, that if any among
them be three times convicted of
falsehood he shall be doomed to si-
lence during life: but the upright
they release from tax and tribute.

The second division is the caste of
the Agriculturists who are the most
numerous and worthy. They pursue
their occupation free from military
duties and fear; neither concerning
themselves with civil nor public nor
any other business; and it often hap-
pens that, at the same time and place,
the military class is arrayed and en-
gaged with an enemy, whilst the agri-
cultural, depending upon the other for
protection, plough and dig without any
kind of danger. And since the land
is all held of the king, they cultivate
upon hire, paying a rent of one fourth
of the produce.

The third caste is that of the Shep-
herds and Hunters, whose sole occu-
pation is hunting, grazing, and selling
cattle, for which they give a premium
and stipend: for clearing the land
also of wild beasts and birds which

After the Hunters and Shepherds,
the fourth race is that of the Arti-
zans and Innholders and bodily La-
bourers of all kinds: of whom some
bring tribute, or instead of it, perform
stated service on the public works.
But the manufacturers of arms and
builders of ships are entitled to pay
and sustenance from the king: for
they work only for him. The keeper
of the military stores gives the arms
out to the soldiers, and the governor
of the ships lets them out for hire to
the sailors and merchants.

The fifth caste is the Military;
who, when disengaged, spend the rest
of their time at ease in stations pro-
perly provided by the king; in order
that whenever occasion shall require
they may be ready to march forth
directly, carrying with them nothing
else than their bodies.

The sixth are the Inspectors whose
business it is to pry into all matters
that are carried on, and report them

The seventh class are the Counselors and Assessors of the king, by whom the government and laws and administration are conducted.

It is unlawful either to contract marriages from another caste, or to change one profession or occupation for another, or for one man to undertake more than one, unless the person so doing shall be one of the Philosophers, which is permitted on account of their dignity.

Of the Governors some preside over the rural affairs, others over the civil, others again over the military. To the first class is entrusted the inspection of the rivers, and the admeasurements of the fields after the inundations, as in Egypt, and the covered aqueducts by which the water is distributed into channels

The fifth class presides over the manufactured articles, arranging them and separating the stamped from the common, and the old from the new, and laying a fine upon those who mix them. persing their speed with honor or punishment, and attending to their safety. The third class have the charge of the infantry. The fourth of the cavalry. The fifth of the chariots. The sixth of the elephants. Moreover there are royal stables for the horses and beasts; and a royal arsenal, in which the soldier deposits his accoutrements when he has done with them, and gives up his horse to the masters of the horse, and the same with respect to his beasts. They ride without bridles: the oxen draw the chariots along the roads: while the horses are led in halters, that their legs may not be injured, nor their spirit impaired by the draught of the chariots. In addition to the charioteer, each chariot contains two riders: but in the equipment of an elephant its conductor is the fourth, there being three bowmen also upon it.

The Indians are frugal in their diet, more particularly in the camp: and as they use no superfluities, they generally attire themselves with elegance.

The relation of Strabo is continued, with an account of the laws and customs of the Indians; containing some extracts from Megasthenes irrelative to the antiquities.

OF THE PHILOSOPHERS.

Ἐγγυτέρω δὲ πίστεώς φησιν ὁ Μεγασθένης, ὅτι οἱ ποταμοὶ καταφέρουσι ψῆγμα χρυσοῦ, καὶ ἀπ' αὐτοῦ φόρος ἀπάγειτο τῷ βασιλεῖ· τοῦτο γὰρ καὶ ἐν Ἰβηρίᾳ συμβαίνει.

Περὶ δὲ τῶν φιλοσοφῶν λέγων, τοὺς μὲν ὀρεινοὺς αὐτῶν, φησιν, ὑμνητὰς εἶναι τοῦ Διονύσου, δεικνύντας τεκμήρια τὴν ἀγρίαν ἀμπελὸν παρὰ μόνους αὐτοῖς φυομένην, καὶ κιστὸν, καὶ δάφνην, καὶ μυρρίνην, καὶ πύξον, καὶ ἄλλα τῶν αἰθαλῶν, ὧν μηδὲν εἶναι πέραν τοῦ Εὐφράτου πλὴν ἐν παραδείτοις σπάνια καὶ μετὰ πολλῆς ἐπιμελείας σωζόμενα. That is much more worthy of credit which Megasthenes reports, that the rivers roll down crystals of gold; and that a tribute is collected from thence for the king: for this also takes place in Iberia.

And speaking of the Philosophers, he says, that those who inhabit the mountains are votaries of Dionysus and point out traces of him among them, inasmuch as with them alone the vine grows naturally wild as well as the ivy, and laurel, and myrtle, and the box, and other species of the evergreens; of which beyond the Euphrates there are none except such as are kept as rarities in gardens and preserved with great care. The following are also customs of Dionysic origin, to wear linen tunics and turbans, and to use oils and perfumes; and to precede their kings with bells and drums when he goes forth upon a journey. The inhabitants of the plain however are addicted to the worship of Hercules.—*Str.* xv. 711.

"Αλλην δὲ διαίρεσιν ποιεῖται περὶ τῶν Φιλοσόφων, δύο γένη φάσκων, ὧν τοὺς μὲν Βραχμᾶνας καλεῖ, τοὺς δὲ Γερμᾶνας.

He makes also another division of the Philosophers, saying that there are two races of them, one of which he calls the Brahmanes and the Germanes.

Of these the Brahmanes are the more excellent, inasmuch as their discipline is preferable : for as soon as they are conceived they are committed to the charge of men skilled in magic arts, who approach under the pretence of singing incantations for the well-doing both of the mother and the child; though in reality to give certain wise directions and admonitions : and the mothers, that willingly pay attention to them, are supposed to be more fortunate in the birth.

After birth they pass from the care of one master to that of another, as their increasing age requires the more superior. The Philosophers pass their time in a grove of moderate circumference, which lies in front of the city, living frugally and lying upon couches of leaves and skins : they abstain also from animal food and intercourse with females, intent upon serious discourses, and communicating them to such as wish : but it is considered improper for the auditor either to speak or to exhibit

any other sign of impatience; for, in case he should, he is cast out of the assembly for that day as one incontinent. After passing thirty-seven years in this manner they betake themselves to their own possessions where they live more freely and unrestrained, they then assume the linen tunic, and wear gold in moderation upon their hands and in their ears: they eat also flesh except that of animals which are serviceable to mankind, but they nevertheless abstain from acids and condiments. They use polygamy for the sake of large families; for they think that from many wives a larger progeny will proceed: if they have no servants their place is supplied by the service of their own children, for the more nearly any person is related to another, the more is he bound to attend to his wants.

The Brahmanes do not suffer their wives to attend their philosophical discourses, lest if they should be imprudent they might divulge any of their secret doctrines to the uninitiated: and if they be of a serious turn of mind, lest they should desert them: for no one who despises pleasure and pain even to the contempt of life and death, as a person of such sentiments as they profess ought to be, would voluntarily submit to be under the

domination of another. They have
various opinions upon the nature of
death: for they regard the present
life merely as the conception of per-
sons presently to be born, and death
as the birth into a life of reality and
happiness to those who rightly philo-
sophise: upon this account they are
studiously careful in preparing for
death. They hold that there is
neither good nor evil in the accidents
which take place among men: nor
would men if they rightly regarded
them as mere visionary delusions
either grieve or rejoice at them: they
therefore neither distress themselves
nor exhibit any signs of joy at their
occurrence.

Their speculations upon nature, he
says, are in some respects childish:
that they are better philosophers in
their deeds than in their words; in-
asmuch as they believe many things
contained in their mythologies. How-
ever they hold several of the same
doctrines which are current among
the Greeks; such as that the world
is generated and destructible and of
a spherical figure; and that the God
who administers and forms it, per-
vades it throughout its whole extent:
that the principles of all things are
different; water for instance is the
first principle of the fabrication of

ments there is a certain fifth nature,
of which the heaven and stars are
composed: that the earth is situated
in the centre of the whole: they add
much of a like nature concerning
generation and the soul. They
have also conceived many fanciful
speculations after the manner of
Plato, in which they maintain the
immortality of the soul and the judg-
ments of Hades, and doctrines of a
similar description. Such is his ac-
count of the Brahmanes.

Of the Germanes he says they are
considered the most honorable who
are called Hylobii, and live in the
woods upon leaves and wild fruits,
clothing themselves with the bark of
trees, and abstaining from venery
and wine. They hold communica-
tion by messengers with the kings
who inquire of them concerning the
causes of things, and by their means
the kings serve and worship the
Deity.

After the Hylobii the second in
estimation are the Physicians, philo-
sophers, who are conversant with
men, simple in their habits, but
not exposing themselves to a life
abroad, living upon rice and grain,
which every one to whom they apply
freely gives them and receives them
into his house: they are able by the

use of medicines to render women fruitful and productive either of males or females: but they perform cures rather by attention to diet than the use of medicines. Of medicines they approve more commonly of unguents and plasters, for all others they consider not free from deleterious effects. These and some others of this sect so exercise their patience in labours and trials, as to have attained the capability of standing in one position unmoved for a whole day. There are others also who pretend to divination and incantments, and are skilful in the concerns of the inhabitants and of their laws: they lead a mendicant life among the villages and towns; but the better class settle in the cities. They do not reject such of the mythological stories concerning Hades as appear to them favourable to virtue and piety. Women are suffered to philosophise with some of these sects, though they are required to abstain from venery.—*Strabo*, lib. v. 712.

THAT such and so great an island formerly existed is recorded by some of the historians who have treated of the concerns of the outward sea. For they say that in their times there were seven islands situated in that sea which were sacred to Persephone, and three others of an immense magnitude one of which was consecrated to Pluto, another to Ammon, and that which was situated between them to Poseidon; the size of this last was no less than a thousand stadia. The inhabitants of this island preserved a tradition handed down from their ancestors concerning the existence of the Atlantic island of a prodigious magnitude, which had really existed in those seas; and which, during a long period of time, governed all the islands in the Atlantic ocean. Such is the relation of Marcellus in his Ethiopian history.—

EUEMERUS (the historian) was a
favourite of Cassander the king, and
being upon that account constrained
by his master to undertake some
useful as well as extensive voyage
of discovery he says, That he tra-
velled southwards to the Ocean, and
having sailed from Arabia Felix stood
out to sea several days, and continued
his course among the islands of
that sea; one of which far exceeded
the rest in magnitude, and this was
called Panchæa. He observes that
the Panchæans who inhabited it
were singular for their piety, honor-
ing the Gods with magnificent sacri-
fices and superb offerings of silver
and gold. He says moreover that the
island was consecrated to the Gods,

displayed in its institutions and services: some of which we have in part detailed in the books preceding this. He relates also that upon the brow of a certain very high mountain in it there was a temple of the Triphylæan Zeus, founded by him at the time he ruled over all the habitable world whilst he was yet resident amongst men. In this temple stood a golden column on which was inscribed in the Panchæan characters a regular history of the actions of Ouranus and Cronus and Zeus.

In a subsequent part of his work he relates that the first king was Ouranus, a man renowned for justice and benevolence, and well conversant with the motions of the stars: and that he was the first who honored the Heavenly Gods with sacrifices upon which account he was called Ouranus (Heaven). He had two sons by his wife Hestia who were called Pan and Cronus; and daughters Rhea and Demetra. And Cronus reigned after Ouranus; and he married Rhea, and had by her Zeus, and Hera, and Poseidon. And when Zeus succeeded to the kingdom of Cronus he married Hera, and Demetra, and Themis, by whom he had children; by the first the Curetes; Persephone

THE CHALDÆAN ORACLES OF ZOROASTER.

CAUSE

GOD, FATHER, MIND, FIRE MONAD, DUAD, TRIAD.*

I.† Ὁ δὲ θεός ἐστι κεφαλὴν ἔχων ἰέρακος· οὗτός ἐστιν ὁ πρῶτος, ἀφθαρτος, αἰδῖος, ἀγέννητος, ἀμερῆς, ἀνομοιότατος, ἡνίοχος παντός καλοῦ, ἀδωροδόκητος, ἀγαθῶν ἀγαθώτατος, φρονίμων φρονιμώτατος. ἔστι δὲ καὶ πατὴρ εὐνομίας καὶ δικαιοσύνης, αὐτοδίδακτος, φυσικὸς, καὶ τέλειος, καὶ σοφὸς, καὶ ἱεροῦ φυσικοῦ μόνος εὐρετής.

But God is he that has the head of a hawk. He is the first, indestructible, eternal, unbegotten, indivisible, dissimilar; the dispenser of all good; incorruptible; the best of the good, the wisest of the wise: he is the father of equity and justice, self-taught, physical, and perfect, and wise, and the only inventor of the sacred philosophy.—*Euseb. Præp. Evan.* lib. I. c. 10.

* Mr. Taylor in his collection of the oracles (*Class. Journ.* No. 22.) has arranged them under the following heads. I. The oracles which he conjectures may be ascribed to Zoroaster himself. This division includes the collection of Psellus, and in this collection are marked Z. as in the 8th. II. Oracles delivered by Theurgists under the reign of Marcus Antoninus. These relate to the Intelligible and Intellectual orders: and are here distinguished by a T as in the 4th. III. Oracles delivered either by the Theurgists or by Zoroaster, here marked Z or T. as in the 2nd. The rest he has placed together as uncertain or imperfect in their meaning; to which he has subjoined a few from the *Treatise of Lydus de Mensibus*. We are also indebted to Mr. Taylor for the references to the authors from whom the collection was originally made, and for the addition of several oracles hitherto unnoticed: the latter are distinguished by the letters *Tay.* after the reference, as in the 2nd oracle.

† Eusebius attributes this to the Persian Zoroaster. I have added it to the collection.

The Mind of the Father made a jarring noise, understanding by
unwearied counsel

* The whole of the following division is a system grafted upon the Platonic doctrine of Ideas. It is composed of six different orders, called Triads, or each consisting of three Triads, which have different names in the respective theologies of the Modern Platonists, and of those who assumed the title of Chaldæans. Both regarded the first Cause as the One and the Good; from whom proceeded in succession the three first orders which were all Ineffable and Superessential.

† Taylor omits these two lines, which Fr. Pat. and Stan insert.

‡ μετα Tay.

Omniform ideas : which flying out from one fountain
They sprung forth : for from the Father was the will and the
end ;

(By which they are connected with the Father
According to alternate life from several vehicles,)
But they were divided, being by intellectual fire distributed
Into other Intellectuals : For the king previously placed before
the multiform world

An intellectual, incorruptible pattern, the print of whose form
Is promoted through the world, according to which things the
world appeared

Beautified with all-various Ideas ; of which there is one fountain,
From this the others rush forth distributed,
And separated about the bodies of the world, and are borne
Through its vast recesses like swarms
Turning themselves on all sides in every direction,
They are Intellectual conceptions from the paternal fountain,
Partaking abundantly the flower of Fire in the point of restless
time,

But the primary self-perfect fountain of the Father
Poured forth these primogenial ideas.

XCVI. Cum anima currat semper, certo temporis spatio
transit omnia, quibus peractis, cogitur recurrere
paulatim per omnia denuo, atque eandem in mundo
telam generationis retexere, ut placuit Zoroastri,
qui iisdem aliquando causis omnino redeuntibus,
eosdem similiter effectum reverti putat.

Since the soul perpetually runs and passes through all things
in a certain space of time, which being performed, it is presently
compelled to run back again through all things and unfold the
same web of generation in the world, according to Zoroaster, who
thinks that as often as the same causes return, the same effects
will in like manner be returned.

xcviii. Qui autem a Deo traditi sermones fontem per se laudant omnis animæ empyreas, id est empyrealis, ætherealis, materialis: et hunc sejungunt ex totâ Zoogonotheâ, a quâ et totum fatum suspendentes duas faciunt *σειράς*, id est ordines, hanc quidem animalem, hanc autem ut diximus *μοιραῖαν*, id est sortialem, fatalem. Et animam ex alterâ trahentes, quandoque autem fato servire, quando irrationalis facta, dominum permutaverit, pro providentiâ fatum.

The oracles delivered by the gods celebrate the essential fountain of every soul, the empyrean, the ethereal, and the material. This fountain they separate from the whole vivific goddess*; from whom also suspending the whole of fate, they make two series, the one animastic, or belonging to the soul, and the other belonging to Fate. They assert that the soul is derived from the animastic series, but that sometimes it becomes subservient to Fate, when passing into an irrational condition of being, it becomes subject to fate instead of Providence.

The most celebrated of the Babylonians, together with Ostanes and Zoroaster, very properly call the starry spheres *herds*; whether because these alone among corporeal magnitudes, are perfectly carried about a centre, or in conformity to the oracles, because they are considered by them as in a certain respect the bonds and collectors of physical reasons, which they likewise call in their sacred discourses herds, and by the insertion of a *gamma*, angels. Wherefore the stars which preside over each of these herds are considered demons similar to the angels, and are called archangels: and they are seven in number.

HERMETIC FRAGMENTS.

FROM THE ANCIENT HERMETIC BOOKS.

ΠΡΟ τῶν ὄντως ὄντων καὶ τῶν ὅλων ἀρχῶν, ἐστὶ Θεὸς εἷς, πρῶτος καὶ τοῦ πρώτου Θεοῦ καὶ βασιλέως, ἀκίνητος ἐν μονότητι τῆς ἑαυτοῦ ἐνότητος μένων. οὔτε γὰρ νοητὸν αὐτῷ ἐπιπλέκεται, οὔτε ἄλλό τι· παράδειγμα δὲ ἴδρυται τοῦ αὐτοπάτορος, αὐτογόνου, καὶ μονοπάτορος Θεοῦ, τοῦ ὄντος ἀγαθοῦ. Μείζον γὰρ τι καὶ πρῶτον, καὶ πηγὴ τῶν πάντων, καὶ πυθμὴν τῶν νοουμένων πρώτων εἰδῶν ὄντων· ἀπὸ δὲ τοῦ ἐνὸς τούτου, ὁ αὐτάρχης Θεὸς ἑαυτὸν ἐξέλαμψε, διὸ καὶ αὐτοπάτωρ καὶ αὐτάρχης. Ἀρχὴ γὰρ οὗτος καὶ Θεὸς Θεῶν· μονὰς ἐκ τοῦ ἐνὸς, πρῶτος καὶ ἀρχὴ τῆς οὐσίας· ἀπ' αὐτοῦ γὰρ ἡ οὐσιότης καὶ ἡ οὐσία· διὸ καὶ νοητάρχης

BEFORE all things that essentially exist, and before the total principles, there is one God, prior to the first God and King, remaining immoveable in the solitude of his unity; for neither is the Intelligible immixed with him, nor any other thing. He is established, the exemplar of the God who is the father of himself, self-begotten, the only father, and who is truly good. For he is something greater, and the first; the fountain of all things, and the root of all primary Intelligible existing forms. But out of this one, the self-ruling God made himself shine forth; wherefore he is the father of himself, and self-ruling: for he is the first principle and God of Gods. He is the monad from the one; before essence, yet the first principle of essence, for from him is entity and essence; on which account

προσαγορεύεται. Αὐται μὲν οὖν εἰσὶν ἀρχαὶ πρεσβύταται πάντων, ἃς Ἑρμῆς πρὸ τῶν αἰθερίων καὶ ἐμπυρίων Θεῶν προστάττει καὶ τῶν ἐπουρανίων.

Κατ' ἄλλην δὲ τάξιν προστάττει Θεὸν τὸν Ἡμήφ,* τῶν ἐπουρανίων Θεῶν ἡγούμενον· ὃν φησιν νοῦν εἶναι αὐτὸν ἑαυτὸν νοοῦντα, καὶ τὰς νοήσεις εἰς ἑαυτὸν ἐπιστρέφοντα. Τούτου δὲ τὸ ἐν ἡμέρες, καὶ ὃ φησι πρῶτον μάγευμα προτάττει· ὃν καὶ Εἰκτὼν ἐπονομάζει· ἐν ᾧ δὴ τὸ πρῶτόν ἐστι νοῦν, καὶ τὸ πρῶτον νοητὸν, ὃ δὴ καὶ διὰ σιγῆς μόνης θεραπεύεται. Ἐπὶ δὲ τούτοις τῶν ἐμφανῶν δημιουργίας ἄλλοι προεστήκασιν ἡγεμόνες. ὃ γὰρ δημιουργικὸς νοῦς, καὶ τῆς ἀληθείας προστάτης, καὶ σοφίας, ἐρχόμενα μὲν ἐπὶ γένεσιν, καὶ τὴν ἀφανῆ τῶν κεκρυμμένων λόγων δύναμιν εἰς φῶς ἄγων, Ἀμῶν κατὰ τὴν τῶν Αἰγυπτίων γλῶσσαν λέγεται. συντελῶν δὲ ἀψευδῶς ἕκαστα, καὶ τεχνικῶς μετ' ἀληθείας Φθᾶ· Ἑλληνες δὲ, εἰς Ἡφαιστον μεταλαμβάνουσι τὸν Φθᾶ, τῷ τεχνικῷ μόνον προσβάλλοντες·

he is celebrated as the chief of the Intelligibles. These are the most ancient principles of all things, which Hermes places first in order, before the ethereal and empyrean gods and the celestial.

But, according to another division, he (Hermes) places the god Emeph* as the ruler of the celestial gods: and says that he is Intellect understanding himself, and converting other intelligences to himself. And before this he places the indivisible One, which he calls the first effigies, and denominates him Eicton; in whom, indeed, is the first Intellect and the first Intelligible: and this One is venerated in silence. Besides these, other rulers are imagined to exist, which govern the fabrication of things apparent: for the demiurgic Intellect, which properly presides over truth and wisdom, when it proceeds to generation and leads forth into light the inapparent power of the secret reasons, is called Amon, according to the Egyptian tongue: and when it perfects all things not deceptively, but artificially according to truth, Phtha; but the Greeks change the word Phtha into Hephaestus, looking only to the artificial: regarded as the producer of good things, it is called

Osiris, and according to its other
powers and attributes it has different
appellations. There is also, accord-
ing to them, another certain principle
presiding over all the elements in a state
of generation, and over the powers
inherent in them, four of which are
male, and four female; and this prin-
ciple they attribute to the Sun. There
is yet another principle of all nature
regarded as the ruler over generation,
and this they assign to the Moon.
They divide the heavens also into
two parts, or into four, or twelve, or
thirty-six, or the doubles of these;
they attribute to them leaders more
or less in number; and over them
they place one whom they consider
superior to them all. Hence, from
the highest to the last, the doctrine
of the Egyptians concerning the prin-
ciples, inculcates the origin of all
things from One, with different gra-
dations to the Many; which (the
Many) are again held to be under
the supreme government of the One:
and the nature of the Boundless is
considered entirely subservient to the
nature of the Bounded and the su-
preme Unity the cause of all things.
And God produced Matter from the
materiality of the separated essence,
which being of a vivific nature, the
Demiurgus took it, and fabricated
from it the harmonious and imper-
turbable spheres: but the dregs of

Chæremon and others believe that nothing existed prior to the sensible worlds, and they place among the foremost of such opinions the sentiments of the Egyptians, who hold that there are no other gods than those which are called the planets, and the constellations of the Zodiac, and such as these. They say, also, that the honours paid to the ten great gods and those which are called heroes, whose names appear in the almanacks, are nothing else than charms for the cure of evils, and observations of the risings and settings of the stars, and prognostications of future events. For it seems that they esteem the Sun to be the demiurgus, and hold that the legends about Osiris and Isis, and all other their mythological fables, have reference either to the stars, their appearances and occultations, and the periods of their risings, or to the increase and decrease of the moon, or to the cycles of the sun, or the diurnal and nocturnal hemispheres, or to the river: in short, that every thing of the kind relates merely to physical operations, and has no connexion or reference whatever to incorporeal and living essences properly so called. Zeus is the breath of all things. Zeus is the rushing of indefatigable fire.

Zeus is the root of the sea: He is the sun and moon.

Zeus is the king; He is the author of universal life;

One Power, one Dæmon, the mighty prince of all things:

One kingly frame, in which this universe revolves,

Fire and water, earth and ether, night and day,

And Metis (Counsel) the primeval father, and all-delightful Eros (Love).

All these things are united in the vast body of Zeus.

Would you behold his head and his fair face,

It is the resplendent heaven, round which his golden locks

Of glittering stars are beautifully exalted in the air.

On each side are the two golden taurine horns,

The risings and settings, the tracks of the celestial gods;

His eyes the sun and the opposing moon;

His unfallacious Mind the royal incorruptible Ether.

Πρῶτα μὲν ἀρχαίου Χάος μελανήφατον ὕμνον,

First I sung the obscurity of ancient Chaos,
 How the Elements were ordered, and the Heaven reduced to
 bound;
 And the generation of the wide-bosomed Earth, and the depth
 of the Sea,
 And Eros (Love) the most ancient, self-perfecting, and of mani-
 fold design;
 How he generated all things, and parted them from one another.
 And I have sung of Cronus so miserably undone, and how the
 kingdom
 Of the blessed Immortals descended to the thunder-loving Zeus.

And Cronus, who in the boundless tracts brought forth
The Ether, and the splendid and glorious Eros of a two-fold

And Earth first produced the starry Heaven equal to herself,
That it might inclose all things around herself.

What Orpheus has asserted upon
 the subject is as follows: "From the
 beginning the Ether was manifested in
 time," evidently having been fabricated
 by God: "and on every side of the
 Ether was the Chaos; and gloomy
 Night enveloped and obscured all
 things which were under the Ether."
 by attributing to Night a priority, he
 intimates the explanation to be, that
 there existed an incomprehensible
 nature, and a being supreme above
 all others, and pre-existing, the demi-
 urgus of all things, as well of the
 Ether itself (and of the night) ¶ as of
 all the creation which existed and was

* I have given this fragment from Malala, in whose text it appears to be less corrupted. It was originally preserved by Timotheus, who has evidently endeavoured to explain it upon Christian principles. His parenthetical explanations have been considered as part of the Orphic text, and been the cause of its obscurity. Without tampering with the text, I have endeavoured to restore it in the translation to its original purity. It is, doubtless, the same passage from the theogony of Orpheus, commented upon by Damascius. See *infra*.

Thus says Timæus the Locrian.—
 The causes of all things are two; In-
 tellect, of those which are produced ac-
 cording to Reason; and Necessity, of
 those which necessarily exist according
 to the powers of bodies. Of these the
 first is of the nature of good, and is
 called God, the principle of such
 things as are most excellent. Those
 which are consequent, and concauses
 rather than causes, may be referred
 to Necessity, and they consist of Idea
 or Form, and Matter, to which may
 be added the Sensible (world), which
 is as it were the offspring of these two.
 The first of these is an essence un-
 generated, immoveable, and stable,
 of the nature of Same, and the in-
 telligible exemplar of things gene-
 rated which are in a state of per-
 petual change: and this is called Idea

or Form, and is to be comprehended only by Mind. But Matter is the receptacle of Form, the mother and female principle of the generation of the third essence, for, by receiving the likenesses upon itself, and being stamped with Form, it perfects all things, partaking of the nature of generation. And this Matter, he says, is eternal, moveable, and of its own proper nature, without form or figure, yet susceptible of receiving every form: it is divisible also about bodies, and is of the nature of Different. They also call Matter, Place and Situation. These two, therefore, are contrary principles: Idea or Form is of the nature of Male and Father; but Matter of the nature of Female and Mother: and things which are of the third nature are the offspring of the two. Since then there are three natures, they are comprehended in three different ways; Idea, which is the object of science, by Intellect; Matter, which is not properly an object of comprehension, but only of analogy, by a spurious kind of reasoning; but things compounded of the two are the objects of sensation, and opinion or appearance. Therefore, before the heaven was made, there existed in reality Idea, and Matter, and God the demiurgus of the better nature;

and since the nature of Elder (Continuance) is more worthy than that of Younger (Novelty,) and Order than of Disorder; God in his goodness seeing that Matter was continually receiving Form and changing in an omnifarious and disordered manner, undertook to reduce it to order and put a stop to its indefinite changes, by circumscribing it with determinate figure: that there might be corresponding distinctions of bodies, and that it might not be subject to continual variations of its own accord. Therefore he fabricated this world out of all the matter, and constituted it the boundary of essential nature, comprising all things within itself, one, only-begotten, perfect, with a Soul and Intellect (for an animal so constituted is superior to one devoid of Soul and Intellect): he gave it also a spherical body, for such of all other forms is the most perfect. Since, therefore, it was God's pleasure to render this his production most perfect, he constituted it a God, generated indeed, but indestructible by any other cause than by the God who made it, in case it should be his pleasure to dissolve it.

You say that, in my former dis-
 course, I have not sufficiently ex-
 plained to you the nature of the
 First. I purposely spoke enigma-
 tically, that in case the tablet should
 have happened with any accident,
 either by land or sea, a person, with-
 out some previous knowledge of the
 subject, might not be able to under-
 stand its contents. This, then is the
 explanation. About the king of all
 things, all things are, and all things
 are on account of Him, and He is
 the cause of all good things. But the
 second is about things of the second
 kind, and the third about things of
 the third kind. Therefore the human
 soul, from its earnest desire to know
 what these things may be, examines
 those within itself which are akin to
 them, none of which it possesses in
 sufficient perfection. Such (imper-
 fection) however is not the case with
 regard to the King and those natures
 of which I spoke.—*Plat. Ep. II. p.*

Amelius makes the Demiurgus
triple, and the three Intellects the
three Kings—Him that *exists*, Him
that *possesses*, Him that *beholds*.
And these are different; therefore
the First Intellect *exists* essentially
as *that which exists*. But the Second
exists as the Intelligible in him, but
possesses that which is before him,
and partakes altogether of that,
wherefore it is the Second. But the
Third *exists* as the Intelligible in the
Second as did the Second in the First,
for every Intellect is the same with
its conjoined Intelligible, and it *pos-
sesses* that which is in the Second,
and *beholds* or regards that which is
the First: for by how much greater
the remove, by so much the less
intimate is that which *possesses*.
These three Intellects, therefore, he

* This word is generally misquoted as *τρίτον*, for which I can find no authority. The context of the discourse evidently requires *τριττὸν*, having before treated of the *διττὸν* double Demiurgus of Plotinus. The first four, and last five lines, contain the opinion of Amelius; the rest is the commentary of Proclus. Amelius was himself a Platonist, and the eldest disciple of Plotinus, though he wrote before the system of the modern Platonists had acquired the celebrity given it by his master.

This, says Ion, is the beginning of my discourse. All things are three, and nothing more or less; and the virtue of each one of these three is a triad consisting of Intellect, Power, and Chance.

* The emendations to this passage are very numerous. I have translated it according to Lobeck, as follows: Ἀρχὴ ἥδε μοι τοῦ λόγου πάντα τρία καὶ πλεον οὐδὲν οὐδὲ ἐλάσσων τούτων τῶν τριῶν, ἐνὸς, &c.

A certain person among them, well versed in these matters, wrote a history, in which he says : That God, the demiurgus of all things, for the sake of giving dignity to his productions, was pleased to employ twelve thousand years in their creation ; and extended these years over twelve divisions, called houses. In the first thousand years he created the heaven and the earth ; in the second he made this apparent firmament above us, and called it heaven ; in the third, the sea and all the waters in the earth ; in the fourth, the great lights, the sun and the moon, together with the stars ; in the fifth, every soul of birds, and reptiles, and quadrupeds, in the air, and in the earth, and in the waters ; in the sixth, man. It appears, therefore, that the first six thousand years were consumed before the formation of man ; and during the other six thousand years the human race will continue, so that the full time shall be completed even to twelve thousand years.—*Suid. v. Tyrrhenia.*

In the rhapsodies which pass under
the name of Orphic, the theology,
if any, is that concerning the Intel-
ligible; and the philosophers thus in-
terpret it. They place Chronus (Time)
for the one principle of all things,
and for the two Ether and Chaos:
and they regard the egg as repre-
senting Being simply, and this they
look upon as the first triad†. But
to complete the second triad they
imagine as the god a conceiving and
conceived egg, or a white garment,
or a cloud, because Phanes springs
forth from these. But concerning
this middle (subsistence) different
philosophers have different opinions.
Whatever it may be they look upon

sistences, each of which was also called a triad, and composed of subsistences
bearing analogy to the whole.

it as Mind; but for Father and Power some of them imagine other things which have no connexion with Orpheus. And in the third triad they substitute for it Metis, whilst they place Ericapæus as Power, and Phanes as Father. ‡

But the middle triad is never to be placed according to the triformed god (Phanes) as absolutely conceived in the egg: for the middle subsistence always shadows out each of the extremes, as should this, which must partake at once both of the egg and of the triformed god. And you may perceive that the egg is the united (subsistence) or principle of union; and the triformed god, who is multi-form about being, is the separated principle of the Intelligible; but the middle subsistence, being united as far as it relates to the egg, and already separated as far as it relates to the god, may be considered as existing altogether as in the act of separation: such is the common Orphic theology.

‡ Wolf. and Lob. omit ὡς τὸν νοῦν. Taylor places it after Μητριν, and translates this very obscure passage thus: "But conceiving him over and above this as father and power, contributes nothing to Orpheus. But they call the third triad Metis as *intellect*, Ericapæus as *power*, and Phanes as *father*." I have inserted a full stop after προσήκοντα. Lob. does the same, though he gives no translation of the passage.

the beginning, and Matter, from
which the Earth was produced, so
that he supposes that the two first
principles were Water and Earth;
the latter of which is of a nature
liable to separation, but the former
a substance serving to congluti-

over as ineffable the one principle
prior to these two, for its recondite
nature is evinced, in that there is no
manifestation appertaining to it. The
third principle after these two, which
is generated from them, that is from
the Water and Earth, is a Dragon

naturally produced, and in the middle,
between these, is the countenance of
the God: he has, moreover, wings

third principle is regarded as subsisting according to essence, inasmuch as it is supposed to exist in the nature of male and female, as a type of the generating principle of all things.

And in the rhapsodies I conceive that the (Orphic) theology, passing over the two first principles, together with the one preceding those two which is delivered in silence, establishes the third, which is properly posterior to the other two, as the first principle, inasmuch as it is the first which has something effable in its nature, and commensurate with human conversation. For the venerable and incorruptible Chronus (Time) was held in the former hypothesis to be the father of Ether and Chaos: but in this he is passed over, and a Serpent substituted: and the threefold Ether is called intellectual, and Chaos boundless, and the dark cloudy Erebus is added to them as a third. He delivers, therefore, this second triad as analogous to the first, this being potential as was that paternal. Wherefore the third subsistence of this triad is dark Erebus, and its paternal principle and summit Ether, subsisting not simply but intellectually, and the middle derived from it is boundless Chaos. But with these it is said Chronus generated the egg, for this

relation makes it a procession of
 Chronus, and born of these, in-
 asmuch as from these proceeds the
 third Intelligible triad. What, then,
 is this triad? The egg, the duad of
 the natures of male and female con-
 tained in it, and the multitude of the
 all-various seeds in the middle of it;
 and the third subsistence in addition
 to these is the incorporeal god, with
 golden wings upon his shoulders, who
 has the heads of bulls springing forth
 from his internal parts, and upon his
 head an enormous serpent, invested
 with the varied forms of beasts. This,
 therefore, is to be taken as the Mind
 of the triad: but the middle proces-
 sions, which are both the Many and
 the Two, must be regarded as Power,
 but the egg as the paternal principle
 of this third triad. But the third god
 of this third triad, the theology now
 under discussion celebrates as Pro-
 togonus (First-born), and calls him
 Dis, as the disposer of all things, and
 the whole world: upon that account
 he is also denominated Pan. Such
 are the hypotheses which this gene-
 alogy lays down concerning the Intel-
 ligible principles.

But the cosmogony which is deli-
 vered by the Peripatetic Eudemus as
 being the theology of Orpheus, passes
 the whole Intelligible order in silence,

** The emendation of γῆν for τὴν is proposed by Mr. Taylor, and though I find no authority in the different texts for it, it is evidently requisite not only for the sense but to accord with Hesiod's Theogony.

the three-fold Intelligible, Eros being put for the third subsistence, considered according to its convertive nature. Orpheus also in his rhapsodies has adopted a very similar disposition, for he places the Earth for the first, being the first that was conglomerated into a compact and essential substance, while he places Tartarus as the middle, as having already, in a manner, a tendency towards disunion.

But Acusilaus appears to me to regard Chaos as the first principle and altogether unknown, and after this one to place the duad, Erebus as the male and Night as the female, the latter being substituted for infinity, and the former for bound; and from a connexion between these were generated Ether and Eros (Love), and Metis (Counsel), these three being the Intelligible hypostases, of which he places Ether as the summit, Eros as the middle in compliance with the natural intervention of love, and Metis as the third, inasmuch as it is already highly-venerable Intellect. And from these, according to the relation of Eudemus, he deduces the vast multitude of the other gods.

Epimenides affirms that the two first
principles are Air and Night : whence
it is evident that he reverences in
silence the one principle which is
prior to the two : from which, I con-
ceive, he holds that Tartarus is gene-
rated regarding it as a nature in a
manner compounded of the two ; for
some, indeed, regard the principle
which is derived from these two as a
kind of Intelligible intermediate sub-
sistence or mediety, properly so
called, inasmuch as it extends itself
to both extremities, the summit and
the boundary ; for by their connexion
with one another, an egg is generated
which is properly the very Intelli-
gible animal from which again pro-
ceeds another progeny.

But Pherecydes Syrius considers
the three first principles to be an
Ever-vital subsistence, Chronus†, and
an Earthly subsistence ; placing, as I
conceive, the One prior to the Two,
and the Two posterior to the One :
and that Chronus generated from
himself Fire, and Spirit, and Water,
representing, I presume, the three-
fold nature of the Intelligible : from
which, when they became distributed
into five recesses, were constituted a
numerous race of gods, called the
five-times animated order, equivalent

to what he might call a five-fold world.
But another opportunity may perhaps
occur for the discussion of this part
of the subject. Such and of a simi-
lar description are the hypotheses
which are received by us relative to
the Greek mythological fables, which
are numerous and very various.

But the Babylonians, like the rest
of the Barbarians, pass over in silence
the One principle of the Universe,
and they constitute Two, Tauthe and
Apon; making Apon the hus-
band of Tauthe, and denominating
her the mother of the gods. And
from these proceeds an only-begotten
son, Moymis, which I conceive is no
other than the Intelligible world pro-
ceeding from the two principles.
From them, also, another progeny is
derived, Dache and Dachus; and,
again, a third, Kissare and Assorus,
from which last three others pro-
ceed Anus, and Illinus, and Aus.
And of Aus and Dauce is born a son
called Belus, who, they say, is the
fabricator of the world, the Demi-
urgus.

But of the Magi and all the Arion
race, according to the relation of
Eudemus, some denominate the In-
telligible Universe and the United
Place, while others call it Time
(Chronus): from whom separately

proceed a Good Divinity and an Evil
Dæmon; or, as some assert, prior to
these, Light and Darkness. Both
the one, therefore, and the other,
after an undivided nature, hold the
twofold co-ordination of the superior
natures as separated and distinct,
over one of which they place Oro-
masdes as the ruler, and over the
other Arimanius.

The Sidonians, according to the
same writer, before all things place
Chronus, and Pothus, and Omichles,
(Time, Love, and Cloudy Darkness).
And by a connexion between Pothus
and Omichles, as the Two principles
are generated Aer and Aura (Air
and a Gentle Breeze), substituting
Air for the summit of the Intelligible,
and the Breeze arising from it for the
vivifying prototype of the Intelligible.
And from these two again is gene-
rated Otus (the Night Raven), re-
presenting, as I conceive, the In-
telligible Mind.

But independent of the collections
of Eudemus we find the mythology
of the Phœnicians thus delivered ac-
cording to Mochus. First was Ether
and Air, which are the Two first
principles; from these was produced
Ulomus, the Intelligible God, and, as
I conceive, the summit of the Intel-
ligible: from whom, by a connexion

with himself, was produced Chusorus, the first expanding principle, and then the Egg: by the latter I imagine they mean the Intelligible Mind; but by Chousorus, the Intelligible Power, being the first nature which separates an unseparated subsistence, unless, perhaps, after the two principles the summit may be the one Wind; but the middle, the two winds Lips and Notus (south-west and south), for sometimes they place these prior to Oulomus. In which case Oulomus himself would be the Intelligible Mind, and the expanding Chousorus the first order after the Intelligible, and the Egg Heaven: for it is said, that by the rupture of it into two parts heaven and earth were produced each from one of its two severed parts.

Of the Egyptian doctrines Eudemus gives us no accurate information. But the Egyptian philosophers, who are resident among us, have explained their occult truth, having obtained it from certain Egyptian discourses. According to them, then it appears to be this. The One principle of the Universe is celebrated as Unknown Darkness, and this three-times pronounced as such: and the Two principles are Water and

Sand, according to Heraïscus; but according to Asclepiades, who is the more ancient of the two, Sand and Water, from whom, and next in succession after them, is generated the first Kamephis, and from this a second, and from this again a third, which, they affirm, completes the whole Intelligible distribution. Such is the system of Asclepiades. But the more modern Heraïscus says that the third, who is named Kamephis from his father and grandfather, is the Sun, equivalent in this case to the Intelligible Mind. But greater accuracy upon the subject can only be obtained from these authors themselves. It must be observed, however, with regard to the Egyptians, that they are often wont to distribute subsistences according to union, as when they divide the Intelligible into the individualities of a multitude of gods, as may be learnt from their own writings by those who will examine them: I refer particularly to the commentary of Heraïscus upon the Egyptian doctrine addressed to Proclus the philosopher alone, and to the concordance of the Egyptian writers, begun by Asclepiades and addressed to the other Theologists.

CHRONOLOGICAL
AND
ASTRONOMICAL FRAGMENTS.

OF THE GREAT YEAR:

FROM BEROSSUS.

BEROSSUS qui Belum interpretatus est, ait cursu ista siderum fieri: et adeo quidem id affirmat, ut conflagrationi atque diluvio tempus assignet: arsura enim terrena contendit, quando omnia sidera, quæ nunc diversos agunt cursus, in Cancrum convenerint, sic sub eodem posita vestigio, ut recta linea exire per orbes omnium possit: inundationem futuram, cum eadem siderum turba in Capricornum convenerit. Illic solstitium, hic bruma conficitur.

BEROSSUS, who thus interprets the Babylonian tradition, says that these events take place according to the course of the stars; and affirms it so positively, as to assign the time for the Conflagration and the Deluge. He maintains that all terrestrial things will be consumed when the planets, which now are traversing their different courses, shall all coincide in the sign of Cancer, and be so placed that a straight line could pass directly through all their orbs. But the inundation will take place when the same conjunction of the planets shall occur in Capricorn. In the first is the summer, in the last the winter of the year.—*Seneca Nat. Quæst.* III. 29.

OF THE GREAT YEAR:

FROM CENSORINUS.

AD Ægyptiorum vero magnum annum luna non pertinet, quem Græci Κυνικὸν Latine Canicularē vocamus. Propterea quod initium illius summitur, cum primo die ejus mensis, quem vocant Ægyptii Θωθ Caniculæ sidus exoritur: nam eorum annus civilis solus habet dies ccclxv sine ullo intercalari, itaque quadriennium eo fit, ut anno M.cccclxi ad idem revolvatur principium. Hic annus etiam Heliacos a quibusdam dicitur: et ab aliis ὁ ἐνιαυτός est. Præterea annus, quem Aristoteles maximum potius quam magnum appellat, quem solis et lunæ vagarumque quinque stellarum orbes conficiunt. Cum ad idem signum ubi quondam simul fuerunt, una referuntur. Cujus anni hyems summa est Cataclysmos, quam nostri Diluvionem vocant. Æstas autem Ecpyrosis quod est mundi incendium. Nam in his alternis temporibus mundus tum exignesere, tum exaquescere videtur, hunc Aristarchus putavit esse annorum vertentium duum millium cccclxxxiiij.

IN the great year of the Egyptians, which the Greeks call the Cynic, and we in Latin the Canicular; the Moon is not taken into consideration: inasmuch as its commencement is fixed when Canicula rises upon the first day of that month which the Egyptians call Thoth. For their civil year has only 365 days, without any intercalary day; whence the quadrennium so adjusts itself, that in the 1461st year the revolution is completed. This year is by some called the Helical, by others the Eniautus, or The Year. But the year which Aristotle calls the greatest, rather than the great, is that in which the sun, moon and all the planets complete their courses, and return to the same sign from which they originally started together. The Winter of this year is the Cataclysm, which we call the Deluge: but its Summer is the Ecpyrosis, that is the Conflagration of the world. For at these alternate seasons the world is burned and de-

OF THE CHRONOLOGICAL ERAS:

FROM CENSORINUS.

NUNC vero id intervallum temporis tractabo, quod Historicon Varro appellat, hic enim tria discrimina temporum esse tradit. Primum ab hominum principio ad Cataclysmum priorem, secundum ad Olympiadem primam; quod quia in eo multa fabulosa referuntur Mythicon nominatur. Tertiam a prima Olympiade ad nos quod dicitur Historicon, quia res eo gestæ veris historiis continentur.

I WILL now treat of that interval of time which Varro calls Historic; for he divides the times into three parts. The first from the beginning of mankind to the former Cataclysm. The second, which extends to the first Olympiad, is denominated Mythic, because in it the fabulous achievements are said to have happened. The third, which extends from the first Olympiad to ourselves, is called Historic, because the actions which have been performed in it are related in authentic history.

Primum tempus sive habuit initium, seu semper fuit; certe quot annorum fuit, non potest comprehendi. Secundum non plane quidem scitur, sed tamen ad mille circiter et de annos esse creditur a priore scilicet Cataclysmo quem dicunt Ogygis ad Inachi regnum annis circiter cccc hinc ad Olympiadem primam paulo plus cccc quos solos quamvis Mythici temporis postremos tamen quia a memoria scriptorum proximos quidam certius diffinire voluere, et quod Sosibius scripsit esse ccclxxxv, Eratosthenes autem septem et cccc, Timæus ccccxvij, Orethres clxiiij. Et præterea multi diversè, quorum etiam ipsa dissensio incertum esse declarat.

De tertio autem tempore fuit aliqua inter auctores dissensio in sex septemve tantum modo annis versata. Sed hoc quodcunque caliginis Varro discussit, et pro cætera sua sagacitate nunc diversarum civitatum conferens tempora, nunc defectus eorumque intervalla retro dinu-

The first period either had some beginning, or had endured from eternity; however that may be, it is impossible to make out what was the number of its years. Neither is the second period accurately determined, yet it is believed to contain about 1600 years; but from the former Cataclysm, which they call that of Ogyges to the reign of Inachus, about 400 years, from thence to the first Olympiad, something more than 400; of which alone, inasmuch as they are the last years of the Mythic period, and next within memory, certain writers have attempted more accurately to determine the number. Thus Sosibius writes that they were 395; Eratosthenes, 407; Timæus, 417; Orethres, 164. Many others also have different opinions, the very discrepancy of which shews the uncertainty in which it is involved.

Concerning the third interval, there was also some disagreement among different writers, though it is confined within a period of only six or seven years. Varro has, however, examined the obscurity in which it is involved, and comparing with his usual sagacity the

merans eruit verum, lucemque ostendit; per quam numerus certus non annorum modo, sed et dierum perspicui possit.

Secundum quam rationem ni fallor hic annus, cujus velut index et titulus quidam est Ulpianus et Pontiani consulatus, ab Olympiade prima M. est et xiiij. ex diebus duntaxat æstivis, quibus Agon Olympiacus celebretur, a Roma autem condita dcccclxxxvi. et quidem ex Palilibus, unde urbis anni numerantur. Eorum vero annorum quibus Julianis nomen est cclxxxviij. sed ex die Kal. Jan. unde Julius Cæsar annis a se constitui fecit principium. At eorum qui vocantur anni Augustani cclxv perinde Kal. Jan. et ante diem xvj Kal. Februarii Ju. Cæsar, divi filius imperator Augustus, sententia Numatii Planci a senatu cæterisque civibus appellatus est, se septimum et M. Vipsano Agrippa Consulibus.

chronicles and annals of different states, calculating the intervals wanted, or to be added by reckoning them backwards, has at length arrived at the truth, and brought it to light. So that not only a determinate number of years, but even of days can be set forth.

According to which calculations, unless I am greatly deceived, the present year, whose name and title is that of the consulships of Ulpian and Pontianus, is from the first Olympiad the 1014th, reckoning from the summer, at which time of the year the Olympic games are celebrated; but from the foundation of Rome it is the 991st; but this is from the Palilia (21st April), from which the years, *ab urbe condita*, are reckoned. But of those years, which are called the Julian years, it is the 283d, reckoning from the Kalends of January, from which day of the year Julius Cæsar ordered the beginning of the year to be reckoned. But of those years which are called the Augustan it is the 265th, reckoning also from the Kalends of January of that year, in which, upon the 16th of the Kalends of February

(15th), the son of Divus Julius Cæsar was saluted Emperor and Augustus, on the motion of Numatius Plancus, by the senate and the rest of the citizens in the consulship of himself for the seventh time, and M. Vipsanus Agrippa.

Sed Ægyptii qui biennio ante in potestatem ditionemque Populi Romani venerunt, habent Augustorum annorum cclxviii. nam ut a nostris ita ab Ægyptiis quidam anni in litteras relati sunt, ut quos Nabonnagarii nominant, qui a primo imperii ejus anno consurgant, quorum hic dcccclxxxvi est.

Item Philippi qui ab excessu Alexandri magni numerantur, et ad hucusque perducti annos dlxii consumant. Sed horum initia semper a die primo mensis ejus summuntur, cui apud Ægyptios nomen est Thoth, quoque hic anno fuit ante diem vij Kal. Julii cum ab hinc annos centum Ulpio et Brutio presente Romæ conss. iidem dies fuerunt ante diem xii Kal. August. quo tempore solet Canicula in Ægypto facere exortum. Quare scire etiam licet anni illius mag-

But the Egyptians, who two years before had been reduced under the dominion of the Roman people, reckon 268 Augustan years: for by the Egyptians, in like manner as by ourselves, certain years are recorded, and they call their era the Era of Nabonnagarius, and their years are calculated from the first year of his reign, of which years the present is the 986th.

The Philippic years also are used among them, and are calculated from the death of Alexander the Great, and from thence to the present time 562 years have elapsed. But the beginning of these years are always reckoned from the first day of that month, which is called by the Egyptians Thoth, which happened this year upon the 7th of the Kalends of July, (25th of June); for a hundred years ago from the present year of the consulship of Ulpus and

ni qui ut supra dictum est solaris et canicularis et trieteris vocatur, nunc agi vertentem annum centessimum.

Initia autem istorum annorum propterea notavi, ne quis nesciat voluntates quæ non minus diversæ sint quam opiniones Philosophorum. Idcirco aliis a novo sole, id est a brumali, ab æstivo solstitio plerisque ab æquinotio verno partim ab autumnali æquinotio, quibusdam ab ortu Vergiliarum, nonnullis ab earum occasu, multis a Canis exortu incipere annus naturalis videtur.

Brutius, the same fell upon the 12th of the Kalends of August (21st July), on which day Canicula regularly rises in Egypt. Whence we know that of this great year which was before mentioned under the name of the Solar Canicular or Trieteris, by which it is commonly called, the present current year, must be the 100th.

I have been careful in pointing out the commencement of all these years lest any one should not be aware of the customs in this respect, which are not less various than the opinions of the Philosophers. It is commenced by some with the new Sun, that is at the winter solstice, by many at the summer solstice; others again reckon from the vernal or from the autumnal equinox. Some also begin the year from the rising or setting of Vergilia (Pleides), but many from the rising of the Dogstar.

summed up are 1605 ; to which if we add the 100 years from the beginning of the reign of Diocletianus,* we have 1705. Let us take the fourth part of these, that is 426, and taking them as days, † add to them 5 more, and they become 431. From these deduct the quadrienniums, which are 102, and there will remain 329 days. Distribute these into months of 30 days each, from Thoth, the first day of the year, and it will thus be found that the rising of the Dogstar in the 100th year of Diocletianus, falls upon the 29th of Epiphi. Use the same rule for any other time.—*MS. Ex cod. reg. Gall. gr. No. 2390, fol. 154.*

AN
INQUIRY
INTO THE
METHOD, OBJECTS, AND RESULT
OF
ANCIENT AND MODERN PHILOSOPHY,
AND INTO
THE TRINITY OF THE GENTILES.

PHILOSOPHICAL INQUIRY.

IN the Introductory Dissertation I have ventured to offer some speculations upon the Trinity and Theology of the Gentiles, which differ widely from the opinions of almost all who have written upon the subject; I would therefore lay before the reader such grounds for the opinion as have induced me to adopt it. But I find it impossible to do so without instituting a short comparative inquiry into the method, objects and result of the ancient and modern systems of Philosophy; and I trust it will not be deemed misplaced, for I conceive that in the neglected writings of the ancients there lies concealed a mine of metaphysical knowledge of such practical utility as would amply repay the trouble of opening it again.

If we were to ask, what was conceived to be the great engine of invention and discovery among the ancients, it is highly probable we should be answered that it was Syllogism; and if we were to ask the same question relative to modern science, we should be unhesitatingly assured that it was Induction; and possibly at the same time we might be told, that the method of the ancients was something worse than useless. Yet, when we come to consider, that in all ages human nature has been the same, and that such admirable productions have been the result of human effort both in ancient and modern times, we shall find reason to suspect that the methods of discovery, or the tools really used in all ages, have been much alike, though their names may have been

misapplied, or they may have been used without having had any distinct appellations assigned them.

By the Inductive method we are supposed to go about to collect, by experience and observation, all the facts and circumstances within our reach, relative to the subject in hand. We must examine them in every light, compare their similarities, and mark their differences; we must reject whatever does not properly relate to the subject, and conclude upon the affirmatives that are left. By these means, from the individuals we rise to some general proposition, and we rest assured in its truth as proved experimentally.

To take a common instance: A child that has been burnt by a flame naturally expects the *same* result from the *same* cause; indeed he is said to feel sure of it from experience: and in the expectation of the *same* result from *similar* causes, he is said to reason by a species of Induction, though not founded on an enlarged experience. But by trying experiments upon all objects which have the appearance of flame, he would learn to distinguish such as are hurtful from such as are otherwise, and excluding those that are harmless, he arrives at the conclusion, that all such objects of a particular kind are hurtful.

Now, in this statement of the process, it appears to me that two very different instruments are used; the first of which seems to be Analogy, ἀναλογία, a reasoning upwards from the known to the unknown, the great instrument of Invention and Generalization, which provides, as it were, subjects for the exercise of Induction; which Induction, ἐπαγωγή, seems to be rather the collection and examination of experiments, and the drawing a conclusion therefrom; and as this conclusion cannot be extended beyond what is warranted by the experiments, the Induction is an Instrument of Proof and Limitation. A person that has been burnt by a flame is positively certain that he will be burnt again if he try it; he argues only from *same* to *same*, and is sure of it by *experience*; and it is upon this innate natural expectation that all physical science is *founded*. By *analogy* he argues that all flames will burn him, he argues from *like* to *like*, he generalizes

and draws an *inference*; and I conceive it is by this analogical reasoning that all science is *advanced*. The inference which he thus draws *a priori*, is merely an *hypothesis*, ὑπόθεσις, a *supposition*, probable indeed, but far from satisfactory. But when he brings it to the proof by induction, and collects experiments, he either confutes, proves, or limits this hypothesis to something not quite so general.

This analogical reasoning, when it is extended only from individual to individual of the same species, is commonly called *experience*, and not *analogy*; and from the perfect uniformity of nature, perhaps not improperly: thus, we say, we know by *experience* that all stones gravitate to the earth. But when we extend it from species to species of the same genus, it is *analogy* properly so called. If from the gravitation all stones we reason to that of apples, we reason by analogy, from like to like; we obtain a probable conclusion, not satisfactory till experiment be directed to the point, and it be proved. Having thus included apples as well as stones, we may proceed from one species to another by the same process of analogy and proof, till all bodies upon the surface of the earth be included under the general law of gravitation, whence we may rise to more general propositions. And I am inclined to think that such has been the common process of discovery in all ages of the world.

When Sir I. Newton, from the fall of an apple, was led to the consideration of the moon's gravity, he is said to have made the discovery by Induction; which is true as far as the proof of it went. But it is manifest, that at first he merely formed a probable hypothesis by Analogy, and then laboriously brought it to the test of observation; and it is highly probable that the hypothesis he formed was, that the moon gravitated to the earth with a constant force, instead of a force varying inversely as the square of the distance; which most likely was the result of another hypothesis, after he had proceeded so far as to ascertain that she did really gravitate, but not according to the law presumed.

When Harvey observed the valves in the veins he is com-

monly said to have made the discovery of the circulation of the blood, by reasoning from *Final causes*, or by asking of nature for what purpose such valves could be intended: but perhaps he might have asked the question for ever, unless the analogy between the valve and that of a pump had suggested a plausible hypothesis, which he proved by repeated experiments directed to the point.

Analogy, so much slighted and overlooked, and to which such an inferior part in the advancement of science has been assigned, and that too with so much suspicious caution, appears to be the great instrument of generalization and invention by which hypotheses are supplied, which are most commonly the subjects for the exercise of Induction. By Induction, as usually understood, we make it a rule to exclude all hypotheses: first of all, we collect the experiments, and having obtained these, we are next to examine them and compare them; we reject the irrelative and negative, and conclude upon the affirmatives that are left. By this means, says Lord Bacon, we question nature, and conclude upon her answers: yet I would venture to suggest, that, ninety-nine times out of a hundred, the Analogy or comparison precedes the collection of the experiments; some resemblance is observed, some hypothesis is started, which is the subject that is brought to the test of Induction. By this the hypothesis is either proved, or confuted, or more commonly limited to something less general. I would not be understood to assert that the common inductive method is barren, for, no doubt, discoveries are sometimes so made; but thousands and thousands of inventions are brought into play, the result merely of analogy and a few experiments, or a single *experimentum crucis*. By the common method proposed we take too wide a range, we embrace the whole subject at once, and require the completion of its natural history, but by the proper use of Analogy as a guide, we step cautiously but from one species to the next.

Induction has two instruments of operation; Experiment for all things within our reach, and Observation for those beyond us. And of these Observation is less efficient than Experiment, for it

is comprehended in it. By Induction *without* Analogy we first ask innumerable irrelative and impertinent questions of nature, and then make use of Observation upon the experiments in hand; but by Induction *with* Analogy we try Experiments for a specific purpose, and obtain specific answers to the point.

Having thus obtained a general law or fact for an entire genus, we may proceed in the same manner from this genus to the next, till the whole order be included under the same or some more general law: thus at length we may arrive at certain most general laws, beyond which it may not be within our power to proceed. And the progress of science in the ascending scale consists in rising from Individuals to Generals and Universals.

Having obtained these general laws or universals, from them we may extend discovery in what may be termed the descending scale: and here Syllogism, in its common acceptation, has its use. Thus, in the science of mixed Mathematics, having obtained certain general laws, physical facts, &c., these, with the common principles of pure mathematics, serve as data from which mathematical discovery may be extended downwards. Every mathematical demonstration by Synthesis is no other than a chain of Syllogism. And as an instrument of invention Syllogism may in this case supply corollaries; as in the former, Induction might yield discoveries without the help of analogy. Yet a very slight consideration will show, that here also Analogy is the great engine of invention by which hypotheses or suppositions are supplied; and that in the descending scale Syllogistic Demonstration, as Induction in the ascending, is the grand instrument for confuting, proving, or limiting those hypotheses.

But among the ancients Syllogism is said to be the great engine of discovery: and though I have not had sufficient opportunities of investigating the truth of the supposition, it has often struck me, that by the Syllogistic method the ancients meant neither more nor less than this combination of Analogy and Proof; and that the method of reasoning from Individuals to Universals, was supposed to be conducted by Syllogism no less than from Universals downwards. Aristotle expressly informs us that we

can learn nothing but by Induction or Demonstration; by Demonstration from universals to particulars, i. e. in the descending scale; by Induction from particulars to universals, or in the ascending scale. Hence, says he, a person who is defective in any of his senses cannot use Induction, and therefore cannot theorize to Universals, or by abstraction obtain general propositions, hence, also, his progress in the scale of Demonstration must be equally defective with his data. Now if the Syllogistic method was held to be the only method of discovery among the ancients, and this method was a process of reasoning from known to unknown, I conceive that, in this respect, the terms must have a more comprehensive signification than is generally allowed.* Though I can find nothing to warrant the supposition, that they accurately divided their Syllogistic method into Analogy and Induction in the ascending scale, and into Analogy and Demonstration in the descending scale; yet I think they imagined, as has generally been the case in modern times, that by their method they went precisely to the point, and no further; instead of going something beyond it by too extensive a generalization, as we are led by Analogy, and then retracting to the point determined by the Proof.

The great abuse of Analogy is resting in its hypotheses without bringing them to the test, and building systems upon such hypotheses; and it is a fault of modern, as well as of ancient philosophers. But when we consider the Eleatic or Dialectic method of examining any proposed hypothesis or idea, explained by Plato in the beginning of the *Parmenides*, we shall find the rules of examination as strict, and perhaps more comprehensive, than any method that has been suggested in modern times.†

* Some papers, entitled *Vindiciæ Antiquæ*, in the *Classical Journal*, throw some light upon this subject, though I cannot concur with the author of them in his opinions of the perfection of ancient science, much less in his abuse of modern philosophers.

† The method is this—Either, I., The subject *is*, as it is supposed; or II., *it is not*. On the first supposition that *it is* so, we must examine *what happens*—1st. To *it* with respect to *itself*: 2d. To *it* with respect to all *other things*: 3rd. To all *other things* with respect to *it*: 4th. To all *other things* with re-

Another more fatal abuse of Analogy is arguing from individuals to genera, or from *genus* to *genus*, when these genera are too remote ; which is skipping to *generalities* instead of cautiously proceeding from species to species. But the most dangerous of all is arguing from Matter to Mind; between which there is no natural similarity. Thus, the common supposition of the Mind determined by motives, as a balance swayed by weights is false; for so far from arguing from like to like, from species to species, we argue not even from genus to genus in the most remote degree, but from one thing to its contrary; false, also, in as much as the motive is a final cause, and the weight an antecedent. This objection, however, to the use of Analogy may be pushed too far: but of the proper use of such reasoning we have an example in one of the finest metaphysical works in the English language, Butler's Analogy.

I would observe, also, the great laxity in the significations of the word *Theory*. It is sometimes used for a general law or principle obtained by Induction, and as something almost synonymous with hypothesis. In this view it might be looked upon as a proved hypothesis; in its other and more general signification it implies the chain of reasoning from general laws and principles, and sometimes the result of such a chain. Its real signification seems to be the Survey itself.* In the descending scale the result of the survey is termed a Theorem, *θεώρημα*: and in the ascending scale the general law obtained, the result of the survey, might perhaps likewise be termed a Theorem: whilst

spect to *themselves*. Four similar cases will result when we examine what *does not happen*; and four more, when we examine what *does, and at the same time does not happen*. Upon the supposition *that it is so*, we must investigate its relations in all their bearings; and we must pursue the same method of investigation upon the second supposition, *that it is not so*. And if it were done according to certain categories, a more thorough investigation could not possibly be devised: and the method is equally applicable to Experimental philosophy as to Intellectual science. For a method of obtaining ideas for examination, see a description of Socrates among some hopeful pupils in one of the comedies of Aristophanes.

* See an excellent paper upon the subject in Blackwood's Magazine, August, 1830.

the Theory, *Ἐκείνη*, the Survey itself, may be taken for the whole chain. which, as it proceeds, every now and then, as it were, deposits these theorems. From one or more general laws or data we deduce certain results or theorems, such as the different expressions for the range, velocity &c. of a shot, in the theory of Projectiles: and each of these expressions would be practically, as well as theoretically true, but for the innumerable other circumstances to be taken into consideration. It is therefore only an approximation to practical truth. From a certain other set of general laws we deduce a theory of Resistances, and by a combination of these two Theories we approximate still nearer to practical truth. And by adding theory to theory relative to the powder, form, texture, elasticity, &c. of the shot, climate, &c. &c. and other circumstances, we might still nearer approximate.* And all these Theories taken together might be termed the Theory of Gunnery.

An Hypothetical system differs from a Theory as does an Hypothesis from a General law or Fact, and is dependant upon Hypotheses instead of Facts: and its productions are of the same description.

* It is utterly impossible, upon the surface of this earth, by Theory, to arrive at practical results, even in the most simple of all practical sciences, Mechanics: particularly, as it sometimes happens, when the results of each Theory, instead of being Theorems, are themselves merely approximations. Of this the ancients were perfectly aware, for both in ascending and descending, they excluded the individuals, as objects of sense and not of science. Much less is it possible in Politics, or any other moral or intellectual science: where not only so few general laws, universals, or data, are ascertained, but the springs of action are so manifold and various, independently of the free-will and perversity of the individuals, that human intellect can scarcely hope to form even a likely approximation to the truth. The speculative philosopher, as is justly observed by Stewart, possesses a fund of knowledge, invaluable in all untried cases, which will guide him a certain way in approximation to the truth. But if he suppose that such theoretical principles are applicable to practice, of course he fails in every instance, and produces nothing but confusion and mischief; of which the state of this kingdom, at this moment, is a most lamentable proof; and the probable result of persevering in such a course cannot be contemplated without the utmost alarm, the more anxiously, as many of the systems still acted on are not true theories, but are built upon false principles and are merely hypothetical systems.

Thus far I have spoken of the *Method* of proceeding, and I have used the terms Laws, Facts, Universals, and the like, in their common acceptation. But these terms are so confounded with each other and with Causes and Effects, that we scarcely know what we are in search of; and some of the ablest views of Bacon's *Novum Organum* have become almost as much lost to the world, as have some of the very finest speculations of the ancients. I would therefore say a few words upon the *Objects* or *Aim* of science.

Causation is a subject upon which there is a strange misunderstanding between the ancients and moderns. By the word Cause the ancients appear to have understood *that* without the co-operation of which no sensible phenomenon could be produced :* and they divided Causes into the Efficient, the Formal, the Material, and the Final. And this division was excellent, and in perfect keeping with a system which held a Soul of the world as the prime mover of Efficient causes. The Final cause or ultimate object and end of every action, I shall dismiss without further consideration, as less properly a cause than a motive, and equally admitted in all systems in which nothing is referred to chance, and as unconnected with the *Physical* subject I have now in hand.

This division of causes has been supposed to be superseded among the moderns: and, since the time of Hume, by the word Cause they seem sometimes to understand the *Bond of connexion* between one event and its preceding; and in this view it is asserted that no causes of things have ever been discovered; and that science lies not in the discovery of causes, but only in the discovery of the facts and general laws of nature: and the same

* See the 47th epistle of Seneca, wherein he explains the common and Platonic division of causes, and unjustly arraigns both, because he conceives Space, Time, and Motion, ought to be excluded. Motion, however, is included in the Efficient Cause, and Space and Time are but the measures of that motion, and the Law of the Motion, when strictly limited and defined, involves consideration of the measure only, and of nothing else.

assertion is likewise made, because no one can pretend to have discovered the first of secondary causes. In another view the Cause is looked upon as implying nothing more than an *antecedent phænomenon*, and that these phænomena, under the names of Cause and Effect, are continued in an endless chain of successive connexions. For example, when we hear a clock strike, if we attend to the chains of successive causes—to go no farther back—they may be traced in the stroke of the hammer, which causes the vibration of the bell, which causes the undulatory movement among the particles of the air, which causes a vibratory motion on the organs of hearing and on the brain; a certain *sensation* follows, and the soul *perceives* that the clock has struck. Now, for the production of this ultimate effect, we may observe not only one, but three distinct chains of what the ancients would call Causes. 1st. The chain of the *material substances* whose matter is in contact with one another, and without which matter the phænomenon could not have been produced, viz. the matter of the hammer, of the bell, of the air, of the auditorial nerve, of the sensorium,* and these are the successive *Material causes*. Again, each of these portions of matter is indued with certain *qualities*, without which also the effect could not have been produced; and these depend upon what the ancients would call the *form*, and they consist of the form, texture, elasticity, vibratory and other qualities of the bell, of the air, nerve, &c. These are the *Formal causes*. To these must be superadded the particular *accidents* by which they are affected, viz., the fall of the hammer, the vibration of the bell, and the others, by which motion is successively communicated: and of this chain of causes each accident is nothing else than motion, modified by the body through which it passes, and may be regarded as a proximate *Efficient cause*. In this phænomenon, therefore, we may trace the Material, Formal, and Efficient Causes of the ancients; all which are necessary for the production of the effect: and we may

* I use the term as Newton uses it, and not as Leibnitz in his dispute with Clarke.

perceive that the ancient and modern doctrines upon the subject of Causation may not be inconsistent with one another: but we must carefully distinguish whether the Cause be defined as the Accident itself, or the Instrument affected with the accident—the Vibration of the bell, or the Bell in the act of vibrating.

Such is a general view of this phænomenon: but we may observe still something more, relating to that *Bond of connexion* which has been so great a stumbling-block among the moderns. When we come more narrowly to inspect this triplicated chain of Causes, between each link there is a joint, if I may so call it: for instance, the *aggregate* motion of the hammer is, in the bell, converted into *atomic* motion. Now this cannot be performed simultaneously, though the manner or *law* according to which it is performed, escapes the observation of our senses. This is the *Latens Processus*, or the *latent process* which Bacon is so anxious to have investigated; and it is often noticed among the ancients, particularly by Plato in the Parmenides and Phædo. The *Latens Schematismus* of Bacon, the *latent form* or *structure*, refers to the latent properties of the bodies, or other unknown circumstances, through which motion is communicated. And as grosser bodies are said to be incapable of contact, a kind of *Latens Schematismus* at every joint in the chain, becomes also an object of inquiry. The inquiry into the *Efficient cause*, the *Matter*, the *latent process*, and the *latent structure*, constitutes Physics, according to the notions of Bacon; which differs but little from the ancient doctrine. But, if we combine the two, we shall have Physical science to consist in investigating the Nature and the Continuity of the Material, Formal, and Efficient causes, together with the Laws according to which the chain of efficient causes is propagated, and this, not only in the Links but in the Joints.* If it were done

* To this might be objected, that the common example of the ancient causes, viz. of a founder casting a statue, does not quadrate with what I have advanced; for in the example, the Efficient cause *a quo* is the Founder, the Material *ex quo* is the brass, the Formal *in quo* is the shape. A more attentive consideration, however, will show that it is only a particular case of the more general that I have taken. The Platonists added to the above the Ideal or Exemplary cause,

through the successive links only, we should in a manner have perfected the grand outline of science, through the more delicate parts, the *latent processes*, and *forms*, and *substances*, at the joints, which constitute the bonds of connexion, should forever be concealed. Yet they need not be despaired of.

If it should be asked why it is thus to be *presumed* a priori, that this triplicated chain of causes is continued throughout nature, the only answer to it is this,—that in every branch of science which has been investigated, and is thoroughly understood, such is the case; and as we can only reason but from what we know, we reason by analogy, from this known to the unknown, and draw a strong presumption in its favour. It may be false, and it cannot be proved otherwise till all science is perfected; but the burden of finding and demonstrating an exception lies with its opponents, who might thus confute or limit it.

In modern experimental Philosophy it is often laid down as a maxim, that the *laws* of nature are the only proper objects of human inquiry: and all investigation of causes is stifled by the dogma which maintains, that human nature is incapable of investigating their nature—a strange fallacy, which seems to be an *ignoratio elenchi*. The laws of nature, or general facts, as they are called—under which obscure expressions are often included the qualities of bodies as well as their matter and the accidents by which they are affected—may be sufficient for the mathematician, as they afford the data from which his propositions may depend. He can rise no higher than his data; nor is it within the compass of his science to prove any simple physical proposition.* In the brilliant discoveries of Sir Isaac Newton certain general laws and qualities of matter gathered by induction, together with the common principles of mathematics, form the data from which the propositions of the *Principia* depend. And the discoveries

secundum quod, according to which it is fashioned, which commonly related to the metaphysical, and not to the physical forms. It might also be objected, that the Vacuum, Gravity &c. are at variance. I speak of them presently.

* We often meet with such attempts: all the mathematical proofs of the parallelogram of forces, for instance, are vicious, and merely augments in a circle.

deduced by mathematical operations may be pushed on by his successors to a greater degree of accuracy and approximation to the truth than they have been already, yet are they merely deductions and links in the descending chain and calculations of effects. But among the data themselves is where we must look for any great advancement of science.

In those branches of science which have attained to any degree of perfection, such as Mechanics, Acoustics and some others, we are not content with the mere fact, but we attend to the successive links in the chain of accident, tracing the motion whence it is derived, and to what it is communicated; and investigating also the law according to which it is propagated: and we trace also the chain of being, in the existence and contact of its matter, and in its qualities and form, as in the example of the Bell. But, notwithstanding the mighty strides which modern science has taken in the *Operative* division of Philosophy, it is manifest what little real progress has been made in the *Speculative* division in the ascending scale; though every step therein opens almost a new era of discovery.

I will now turn to the *Result*. That *Matter or Substance*, by which Qualities are supported, exists, is one of the prime articles of belief among mankind, though its existence can only be inferred from the qualities which it upholds. And it is in this branch, by the chemical resolution of compound substances into more simple substances, that science has of late years made its greatest advancement.

Chief of the *Qualities of Matter* were resolved by the ancients into its Form: and by the union of Form with Matter the Sensible world was supposed to be produced. As I endeavour to bring forward those parts only of the ancient philosophy which may be turned to account, I omit mention of their ingenious metaphysical speculations upon the nature of Form and Matter, Bound and the Boundless, and shall merely observe that the system would naturally tend to resolve all the qualities of Matter

into the primary ones of its Extension, Form, and the absolute Hardness or Impenetrability of its component parts, substance, or atoms.*

Besides the obvious formal qualities of matter, there are certain other qualities, which may be termed supposititious, assumed or occult,† inasmuch as the words Elasticity, Colour, Inertia, Gravity, and many others, are words conventionally assumed to express some unknown causes of effects which have been traced no higher, but which still remain desiderata to which the attention of science should be directed; for they may perhaps be resolved into some immediate formal cause, or into several intermediate links in the chain of accidental causes, latent processes &c. Sir Isaac Newton thus attempted to resolve the elasticity of Light, as far as it concerned Reflection, into a latent process, the attractions of a fluid upon the surfaces of bodies.

* Of the ancients, the Epicureans alone are supposed to have held the existence of atoms: if I mistake not, the Pythagoreans did likewise, though not such a wilful democracy of Atoms as that of Epicurus; nor am I aware that any of the ancients held the infinite divisibility of matter. Neither of these opinions, perhaps, can be brought to the test of proof, we can rest only in analogy; but I think the accuracy of the results and calculations upon the Atomic Theory, plainly induce us to prefer the atomic opinion, upon the same grounds that our faith in the law of Gravitation is strengthened, by the accuracy with which the Planetary movements coincide with their calculated courses, *i. e.* it rests upon observation. The conclusion also, drawn by analogy in favour of atoms, from a substance, always dividing and compounding at the same angle, is far superior to an argument drawn from the infinite divisibility of a mathematical line; inasmuch as it is a fair analogy between two physical propositions: the latter is only a mathematical illustration of a physical proposition; they are not at all of the same kind; the subject under consideration is purely material, the illustration purely ideal. The same may be said of Euler's ingenious argument, "All matter is endued with extension. It therefore possesses all the qualities of extension: one of which is infinite divisibility." For it does not follow that because all matter is endued with extension in the concrete, that it has all the properties of extension in the abstract; only that it might have had, if it had pleased God to make it so.

† The occult qualities of Aristotle are not the nonsense usually fathered upon him; but I prefer the word supposititious, *i. e.* hypothetical, not only to avoid offence, but in better keeping with what I have written upon theory and hypothesis.

Again, in the phænomenon of Colour, the Metaphysical distinction drawn between the *Sensation and Perception* by the Mind, and the *Quality* of the body, which was the cause of that perception, between the redness with which the senses are affected, and the supposititious quality of the body, which so operates upon light as to produce that sensation and perception, cleared away several strange incumbrances. But the grand discovery, that redness or any other colour may be communicated to several bodies by the mere alteration of their superficial texture, has gone far to resolve the colouring quality into the texture or form of the superficies, and to merge the supposititious and conventional quality into a formal cause, one of the primary qualities of matter. From the perception of colours we may trace the chain of antecedent causes of Matter and Form through the optic nerve, through the eye, to the light, to the coloured body, and again to the light. And we may trace also the descending chain of accidents or motion from the general unmodified motions of the light, as first admitted into a chamber, before it strikes upon the body, its alteration at the body, every point of which becomes a centre from which a sphere of motion is propagated, of such a nature, as, when passed through the eye and optic nerve, to produce the perception of colour.

In England, till within the last few years, the Newtonian hypothesis of Light has had a very general ascendancy; but at present that of Huygens bids fair entirely to supplant it. From the similarity which obtains in nature between one fluid and another, I would venture to suggest, that these two hypotheses may not be altogether and fundamentally opposed, but are capable of being reconciled, at least in part; and that light has not only a *progressive*, but a *vibratory* motion also: that to its progressive motion are to be attributed the phænomena of brightness, illumination, shadow and some instances of reflection: and that upon its vibrations depend the phænomena of colour, sight and the like; and that the vibratory motion requisite for the production of Vision, is caused by the progressive, reflected, and impeded motion of the sunbeams, by a change from the aggre-

gate progressive motion of the rays into the atomic vibrations of the fluid. Such an hypothesis is afforded by the analogies of air and water, in their progressive motions of wind and streams, and in their vibratory motions of sound and waves. It is a fair hypothesis, which, if it be confuted when brought to the test of experiment by Induction, may afford some results upon which something more plausible may be offered.

The most remarkable of the supposititious qualities of Matter are Inertia, Gravity, and Attraction. The conceptions of Sir Isaac Newton upon the subject of Gravity and Attraction are perfectly clear and defined. He uses the words—not for the *effect* itself, as Dr. Clarke in his controversy with Leibnitz affirms—not for any *inherent quality* with which matter may be endued—nor for any *accidental motion* with which it may be affected: but he uses them merely conventionally for the antecedent cause of the effect of gravitation: whether the cause be a formal cause, or whether it be motion or force communicated through an antecedent chain of being, or whatever it may be hereafter ascertained. By the universal *effect* of gravitation or the *tendency* itself, proved by Induction from Experiment and Observation upon bodies within our reach, and extended by Analogy confirmed by Observation to the celestial bodies and those which are beyond us, it is evident that such a cause exists: and the knowledge of its existence, and of the *law* according to which it acts, are sufficient for all the purposes to which in mathematics it can be applied.

Sir Isaac Newton laid down as one of the rules of philosophizing, that no other causes ought to be introduced than such as are true, and necessary to account for the phænomena. And he followed his predecessors in maintaining the Inertia of Matter as exerted in the first law of motion, as an inherent, though it may be supposititious quality. But to account for the undiminished motions of the planets he was compelled to assert a Vacuum, or at least a *quasi* vacuum. Yet he hesitated to maintain Gravity as an innate quality of matter, as it would be inconsistent with his own ideas of causation, as expressed in his own rule. He there-

fore left directions to succeeding philosophers to seek its cause ; and pointed out as a fit subject for speculation an hypothetical subtile ether, with which the supposed vacuum might be filled, as capable of supplying the deficient links in the chain of causation. Many of his professed followers, sufficiently alive to the physical inconsistency, hesitated not to assert the absolute vacuum, and gravitation as an inherent quality of matter ; not adverting to the insuperable metaphysical difficulty thus introduced, that they eventually maintained two distinct and independent chains of causation, continually crossing each other and assuming each other's offices : by one of which motion was communicated, through matter in contact, by impulse and vibration, in endless succession ; and by the other through vacuum by means of occult qualities commonly so called ; by either of which the same effects might be produced. Euler and most foreign philosophers, more sensible of the real difficulty of the case, rejected without a scruple such a version of Sir I. Newton's opinions, upon the express grounds, that two secondary causes of motion, one from Inertia the other from Attraction, were utterly incongruous and inadmissible : and such has generally been the opinion of all Metaphysicians. Stewart, equally sensible of the same insuperable difficulty, strangely proposes to resolve all such phænomena into attractions and repulsions, upon the principles of Boscovich. But I shall merely observe, that the experiments from which it is deduced, that the grosser bodies never come into contact, prove it only, because they prove, that there is some substance intervening.

If we turn our attention to the Chain of *Accidents*, we shall find that it consists of Motion, which implies Force, communicated through different portions of the material world. And here I would mark a distinction in the word Force or Power. Where motion is actually produced, the Force by which it is produced is nothing else than the Momentum, or quantity of motion communicated from one body to another in a connected succession. But there is often a Force exerted where no motion is actually produced, the Force being counteracted in its effect. It

produces, however, a continual Stress and Endeavour, and is the Cause of a continued series of such Stresses, Endeavours and Tendencies among bodies in contact, and it is only requisite that some impediment be removed, that motion may take effect.

All motion and tendencies may perhaps be ultimately traced to the forces of Animals, Gravity, Inertia, and the Etherial powers of nature.

The natural or common motion and pressure of Water is evidently resolvable into the forces of Air, Gravity and other causes. The natural or common motions and powers of the Air may be again resolved into those of Gravity, Elasticity and Heat. Galvanism, Electricity and certain Chemical phænomena, might perhaps, if science were properly directed to the investigation, with little difficulty be resolved into a chain of varied accident or motion of one and the same etherial fluid, of which fire is but another form: inasmuch as chief part of the results appear to be but the conversion of aggregate into some species of atomic motion, and the reconversion of this atomic motion into aggregate. The phænomena of Magnetism might perhaps be similarly resolved. Now in these phænomena the great dispute among philosophers does not so much concern the chain of *accident* and motion, as the chain of *being* through which the accidents are propagated; whether the motion be communicated through the grosser particles of matter, or through some subtile fluid which pervades all nature, or through several different fluids endowed with different properties, such as the Galvanic, Electric, Magnetic and other fluids. From the sameness of many of their effects, and from the consideration that they all appear equally extended throughout the universe, if we should presume that they were but one and the same fluid, we should start an hypothesis indeed, but an hypothesis particularly worthy of attention, for unless such be the case we shall have in nature several fluids co-extended through the universe, all of which can perform each other's offices, that is to say, several different causes more than are necessary for the solution of the phænomena.

Gravity, in the present state of science, is an anomaly in

nature, to which no parallel exists; for we are acquainted only with its laws, without a trace of the antecedent proximate links in the chains of Being, and Motion or Force. I have before observed, that a Vacuum is purely an hypothesis; and it is an hypothesis, resting not upon experiment or proof, nor even upon any analogy in nature, but it is a deduction by a chain of argument from the ascertained fact of the undiminished motions of the planets, from the supposititious quality of the inertia of matter, and from the unwarranted assumption, that perpetual motion can only be sustained in *vacuo*; an assumption, chiefly taken from a few experiments, in what may, without much difficulty, be shewn to be the absolute *plenum* of an air-pump. But it is far from evident that a man could move any one of his limbs if it were placed in perfect *vacuo*; whilst thousands of experiments prove, that even a perpetual motion* might be preserved by Fire, Steam, Air, Electricity and other powers of nature, but for the wear and tear of the machinery, the lack of fuel and other extrinsic circumstances: and this, in many instances, in spite of friction; but in all, an absolute plenum of one or more fluids is necessary for the production of the effect.

Of the Force of Animals, it may well be questioned whence it is derived, whether it be originally communicated by the Soul of the animal itself to the material world through its connexion with the body, or whether the soul has power only to influence and divert the motion and force with which that body may be surrounded.

Of the Etherial powers of nature, I must observe, that wherever a Fire is lighted, a wonderful kind of motion commences among the elements, very different from what can be supposed to have been communicated by the agent that pro-

* When I say perpetual motion, of course, I do not allude to the frivolous attempts often made to produce it by mechanical combinations acted upon by gravity. If there were no friction of the machine or air, Gravity and Inertia would always produce a perpetual motion in pendulums, or machinery whose centre of Gravity is at rest; but it could produce *nothing more*. If, therefore, friction is to be superadded, it must produce *something less*.

duced the spark, or could have resided within the spark itself. Light issues on all sides from the fire, and an incessant draft of Air sets into it; and there ensues a motion continually accumulating and increasing, and communicated to the objects around it; and instead of losing motion by such communication, the longer it continues the more violent, intense and extended it becomes, producing such a variety of movements by the descent of walls and timbers, by the overthrow of houses, trees and all obstacles within its reach, as to bid defiance to all ordinary rules of action and re-action, cause and effect: "and no man knoweth whence it cometh, or whither it goeth."

To the ancients who held the World to be their God, Matter its body, and the Etherial powers of the heavens its soul, little difficulty could occur in resolving the motions and forces of the elements and gravity, as well as all individual animal force into the powers of this present universal Deity. By such a solution, it is true that the ancients completed and perfected their bastard system of Physics; and reduced all causes to one simple triplicated chain: and the Efficient, the Formal and the Material might be successively traced from the highest intellectual operation to the lowest sensible phænomenon.

To us, however, who hold the Spiritual world perfectly distinct from the Material, it must be the grand object of Philosophy to trace the chain of causes from matter to matter, to the first of secondary causes. When a clock has struck, the vibrations are conveyed along the auditorial nerves to the Sensorium; and according to other systems besides those of the Materialists, motion is communicated to the Soul itself. Yet analogy, I may say experience upon all natural bodies, would rather lead us to presume that the motion, after a momentary concentration in the sensorium, is again communicated through the brain and skull to the surrounding air, and that no part of it can be lost to the material world by being communicated to the immaterial.

The cause of Gravitation, whatever that may be, causes a strain and tendency in every body which it does not actually put

in motion. By this a stress is exerted upon water in a vessel; by which the like stress or pressure is exerted against the sides of the vessel: and if one of its sides be removed, motion instantly ensues. Now it is evident that this strain or stress, as well as the motion, must be referred to the same cause. And if future discovery should ever show that the antecedent link in the chain of being through which this strain is propagated, is an ethereal fluid of the heavens, we should immediately conclude, that, except where motion was actually produced, there was a continual strain.

In the legitimate use of analogy we are entitled to start such an hypothesis: and it is the business of Philosophy to bring it to the test of Experiment or Observation by Induction; by which it may be confuted, proved, or limited to something less general. But if on such an hypothesis we should argue that the unaccountable effects of fire, in its wonderful motions before observed, are to be resolved into the same force or strain impressed upon the heavens—if, supposing no motion is communicated from the material to the immaterial world, as far as we and other animals are concerned, we should argue to the reverse, that no motion is communicated from the immaterial or the souls of animals to the material,* but that living creatures are only endowed with the faculty of diverting and appropriating the force with which they are surrounded—if we should argue that, in short, all motion among material bodies may be ultimately traced to the ethereal powers of nature, so adjusted as to constitute the mainspring of the machine of the universe; that they are a fluid whose material substance pervades every thing and all space, and perfects the chain of being, endowed with no other qualities than those of form, but impressed with a continued force which is not an inherent quality, though it can be traced no higher; from which all other force and motion amongst things are borrowed, and to

* Query. Might not the term Analogy be applied to arguments proceeding upon the relations of contiguity and contrast, as well as upon the relation of resemblance?

which they are again returned; and into whose operations may be resolved not only the chain of accidents, but all the supposititious qualities of matter—or if, with the school of Hutchinson,* we should resolve this force itself, this strain upon the heavens, into the expansion caused by the motions of the Solar triad of Fire, Light, and Spirit, three conditions of one etherial fluid; I say, we should be tacking one supposition to another; we should be weaving but an hypothetic system; we should be using analogy not in its legitimate province, but, as Lord Bacon calls it, for the purpose of anticipating nature; and we should be running into the common error of the ancients, of proceeding from one step to another without stopping to prove our progress.

That all force is dependant upon the powers of the heavens is no new hypothesis, but as old as Heathenism itself, for the Heathens resolved all forces, both of nature and animals, into the powers of the etherial Soul of the universe: and the hypothesis properly modified, may be even of still higher antiquity.

Nothing, perhaps, is more uniformly insisted on among the Heathen, than that their Trinity was a triad subordinate to a Monad; which monad was clearly one of those two independent principles, which were conceived to have existed before the formation of the world, and was the Etherial Intellectual principle of the Universe; which was in a manner superseded by the Triad. The Triad is likewise maintained to be Phanes or Eros, the Sun, the Soul and Ruler of the world.

To ascertain the persons of this triad, then, I shall merely place the most ancient speculations upon the subject under one another; but at the same time I would observe, that it is one of those questions which, for want of sufficient evidence, is incapable of being brought to the test of absolute demonstration.

* The discovery of the component gasses of the Air has overturned this system in its original extent, yet I conceive that the substitution of the word Caloric for Air might suggest a modification worthy of attention: but there are a great many steps which must be proved before this part of the subject can be even approached legitimately.

From the different Orphic fragments we find that the Orphic Trinity consisted of

Metis,	Phanes, or Eros,	Ericapæus.

which are interpreted

Will, or	Light, or	Life, or
Counsel,	Love,	Lifegiver.

From Acusilaus,

From the later Platonists,

By the ancient Theologists, according to Macrobius, the Sun was invoked in the Mysteries, as

Power of	Light of	Spirit of
the world,	the world,	the world.

To which may perhaps be added, from Sanchoniatho, the three sons of Genus.

Fire,	Light,	Flame.
-------	--------	--------

By omitting the Earth, Water, and other materials, which, in the formation of the world, are elsewhere disposed of, and passing over the refinements of the Pythagoreans, who sometimes even deviated so far as to place the *τὰγαθόν*, the final cause, as the Monad, and the three concauses as the Triad, I think we may find in the above enumeration sufficient ground for maintaining the

opinion, that the persons of the Trinity of the Gentiles, viewed under a Physical aspect, were regarded as the Fire, the Light, and the Spirit or Air of the Etherial fluid Substance of the heavens: which in a Metaphysical aspect were held to be no other than the Power or Will, the Intellect or Reason, and the Spirit or Affections of the Soul of the World; accordingly as the prior Monad was contemplated in its Etherial or Intellectual subsistence.

Metaphysicians have at length approximated to a truth, which, in the Metaphysics of Christianity, is laid down with as much perspicuity and decision, as is the Immortality of the Soul, or as any other of those points which have been so continually agitated among philosophers, modern as well as ancient. The distinction between the Intellect, and the Emotions or Affections, to which, simple as it may appear, such laborious approaches have been made through the mazy paths of Metaphysics, is clearly drawn; and the respective seats of them are assigned, it may be figuratively, but most naturally, to the Head and Heart.

The old division of the Mental Powers into those of the Will and the Understanding, has long been superseded by the division of the school of Reid into the Intellectual and Active Powers. But under the name of the Active Powers, the Will and some part of the Emotions have been also confounded by that school. Later writers, who have drawn the distinction between the Intellect and the Emotions, appear generally to regard the Will as a subordinate appendage to the Emotions, connected perhaps with the material structure of the Animal.

There is an ambiguity in the word Will or Volition, which may be divided into the *Wish*, and into the *Power* to act. The Soul thinks, wishes, acts; and the Power to act appears to me to be a mental Power, as distinct from the Wish or any of the Emotions, as it is independent of any material structure or combination. We may conceive a disembodied spirit with the Intellectual Powers, the Train of Thought only, without the Emotions; and again such a spirit, with the Intellect and Emotions, without the Power of action; and such a being might be susceptible of every sentiment terminating in contemplation, such

as all intellectual Tastes, Memory, Regret, and a variety of others. Stewart, in his speculations upon persons dreaming, supposes the Intellectual Powers with the Train of Thought in exercise, while the Active powers are suspended. But, of the Faculties and Powers which he confounds under that name, it is manifest that the Emotions are not suspended: and though the Power over the material frame is very generally unexercised during sleep, it is a very singular phænomenon, that when the Wish to do any particular action is notified, the Soul presently takes it for granted that the deed required is actually done, and the train of thought is influenced and diverted by some internal power, though the wish is not really gratified. And there is nothing more common in nature than to have the wish without the power to act, or the power without the wish.

I speak only of the immortal and immaterial soul: but if we look more closely into the matter we may observe, in the involuntary motions of the body, in its animal appetites, sensations, and desires, and perhaps in its perceptions, something of a material or corporeal spirit or frame of life, acting independently, though subject to the immortal soul, and whose operations appear to be carried on solely by the powers of nature. And it is this which appears to be so continually leading men astray into Materialism. And herein Plato's disposition is curious. He places the Intellect in the Head; a Soul endued with some of the passions, such as fortitude, is supposed to reside in the Chest, about the Heart: while another soul, of which the appetites, desires, and grosser passions are its faculties, about the Stomach and Spleen. The more refined Emotions he confounds with the Intellect; which I believe is likewise the case with Kant.

The numerous passages in the Scriptures in which the Persons of the Christian Trinity are shadowed forth by the same natural and mental powers which I suppose to constitute the original triad of the Gentiles, are too numerous to require to be specifically referred to.—The Father is continually typified as a Fire accepting the sacrifices, consuming and punishing the guilty, as the Lord of all power and might, to whom all prayers are com-

monly addressed;—the Son as Light, as a Mediator and a Teacher, enlightening the understanding, addressing himself more particularly to the Intellect, pointing out the distinctions between good and evil;—the Spirit, as Spirit or Air, a mighty rushing wind, operating upon the Affections, Feelings, or Emotions. We are commanded by the Christian faith to look to the Son for knowledge, to obey his instructions, and to accept the conditions of Salvation he has offered—to the Spirit, for grace to influence us in all our feelings, wishes and intentions—and to the Father, our prayers are to be directed for the power to act.

I would not presume to lay stress upon any of the hypotheses I may have advanced or adduced in this inquiry. Man is apt to indulge his fancy in building systems which he conceives may set forth the wisdom or magnify the power of his Creator; but when he brings them to the test, and finds the truth itself, he finds it infinitely more sublime than the happiest flight of his imagination. Yet as we must necessarily take all our ideas, as well as our language, from the sensible world—as we are taught that it is a glass, in which things spiritual are purposely, but darkly, shadowed forth—and as we are assured that man is formed in the express image of his Maker; I deem that we outstep not the bounds of true philosophy, when we humbly trace, in the glorious works of the Almighty, a confirmation of his word.
